Multi-channel Power Controller
G3ZA

Optimum Cycle Control for High-precision Control with Low Noise

- Smaller than a Normal Power Controller.
- Enables low-noise power control in combination with zero-cross SSRs. (See note.)
- One Controller can control up to 8 SSRs.
- RS-485 communications to set manipulated variables and heater burnout detection. The Smart FB Library for the G3ZA can also be used.
- CE Marking

Main Upgraded Functions
- Soft-start function added for lamp heaters.
- Three-phase optimum cycle control added for three-phase heaters.
- Combining with special CT for 150-A current detection.

Note: The G3ZA must be used in combination with an SSR without the zero cross function when the soft-start function is used.

■ Performance

Current indication accuracy

- Current Range
  - 0 to 50 A: ±9 A
  - 0 to 150 A: ±9 A
  - 0 to 100%: ±6% (See note.)

Insulation resistance

100 MΩ min. (at 500 VDC) between primary and secondary

Dielectric strength

2,000 VAC, 50/60 Hz for 1 min between primary and secondary

Vibration resistance

Vibration frequency: 10 to 55 Hz,
acceleration: 50 m/s² in X, Y, and Z directions

Shock resistance

300 m/s² three times each in six directions along three axes

Weight

Approx. 200 g (including terminal cover)

Degree of protection

IP20

Memory protection

EEPROM (non-volatile memory) (number of writes: 100,000)

Installation environment

Overvoltage category III, pollution degree 2 (according to IEC 60664-1)

Approved standards

UL508 (Listing), CSA22.2 No. 14
EN605078
EN61000-6-2: 2001

Note: When measured with percentage selected for the current monitor parameter and the maximum current measurable with the CT at 100%.

■ Communications Specifications

Transmission line connections

Multipoint

Communications method

RS-485

Max. transmission distance

500 m

No. of nodes

31 (via multidrop connections)

Synchronization method

Stop-start synchronization

Communications baud rate

9.6, 19.2, 38.4 or 57.6 kbps, Default: 9.6 kbps

Transmission code

ASCII

Communications data length

7 or 8 bits, Default: 7

Communications stop bits

1 or 2 bits, Default: 2

Communications parity

Vertical parity: None, even, or odd, Default: Even

Flow control

None

Note: The maximum continuous current is 50 A for the G3ZA in combination with the E54-CT3.
Applicable SSR and Control Methods

The G3ZA can be used for a variety of applications by selecting the SSR drive. For example, inrush current can be reduced at startup by selecting soft-start optimum cycle control if a single-phase halogen heater is used.

<table>
<thead>
<tr>
<th>SSR Description</th>
<th>Control Method</th>
<th>CT (4-channel models only)</th>
<th>Example of supported heater</th>
</tr>
</thead>

<td>Three-phase optimum cycle control</td>
<td>0 to 50 A or 0 to 150 A: up to 2 Units</td>
<td>Three-phase heater</td>
</tr>
</tbody>
</table>

Optimum Cycle Control

- Optimum cycle control is performed by driving SSRs according to load power detection and trigger signals. (Zero-cross SSRs are used.)
- Noise is suppressed while ensuring high-speed response by turning outputs ON and OFF each half cycle to achieve high-precision temperature control.

Soft-start Optimum Cycle Control

- Soft-start optimum cycle control is a control method that combines phase control and optimum cycle control.
- Smooth switching for phase control and optimum cycle control enables control of outputs with limited inrush current even for loads with characteristics like halogen heaters.
- Use a single-phase heater SSR (without the zero-cross function) for soft-start optimum cycle control. Refer to G3PA on page 11 for details on SSRs without the zero-cross function.
- Control is switched according to the Control Switching MV Threshold.
- Set the Soft-start Up/Down Time to control output.
- Current is not detected during phase control. The current value (heater ON current value, heater OFF current value, and effective current value) will be 0 A, and the current error alarm (heater burnout detection, SSR short-circuit detection, and heater overcurrent detection) will always turn OFF.

Setting the Control Switching MV Threshold

The Control Switching MV Threshold function is enabled when soft-start optimum cycle control is used. Setting the Control Switching MV Threshold enables switching to phase control when the current value is below the set value, and switching to optimum cycle control when the current value is above the set value. The default setting is 20.0%.

Example: For channel 1, soft-start optimum cycle control is performed under the following conditions: control switching MV: 40.0%, MV: 100.0%, soft startup time: 20 s.

1. **Ch1 Control Switching MV Threshold** is set to 40.0% and **Ch1 MV** is set to 100.0% by writing to the variable area.
2. **Ch1 Soft Startup Time** remains at the default. Setting is not required.
3. Once the Control Switching MV Threshold is written, the changes are saved and become enabled the next time the power is turned ON.

Three-phase Optimum Cycle Control

- Three-phase optimum cycle control is a control method that turns the output ON and OFF every two cycles.
- Turning the output ON and OFF every two cycles enables optimum cycle control for three-phase heaters.
- Use a three-phase heater SSR with a zero-cross function for three-phase optimum cycle control.

Note: Refer to page 6 for details on connecting to three-phase heaters. The following figure shows the current waveform of each phase for a MV of 50% when a three-phase heater SSR is connected.
Connections

Terminal Arrangement

Models with 8 Channels (Control Points), No CT Inputs, and No Heater Burnout Detection

- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA

Models with Load Power Supply Voltage of 100 to 240 V

- Power supply voltage 100 to 240 VAC 50/60 Hz
- Load power supply voltage 100 to 240 VAC 50/60 Hz

Note: Connect the power supply (100 to 240 VAC) for the G3ZA across terminals 1 and 2 and the load power supply for the SSR loads across terminals 4 and 6.

Models with 4 Channels (Control Points), CT Inputs, and Heater Burnout Detection

- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA
- Trigger output 12 VDC, 21 mA

Models with Load Power Supply Voltage of 400 to 480 V

- Power supply voltage 400 to 480 VAC 50/60 Hz
- Load power supply voltage 400 to 480 VAC 50/60 Hz

Note: Connect the power supply (100 to 240 VAC) for the G3ZA across terminals 1 and 2 and the load power supply for the SSR loads across terminals 4 and 6.

Models with Load Power Supply Voltage

- Power supply voltage 100 to 240 VAC 50/60 Hz
- Load power supply voltage 100 to 240 VAC 50/60 Hz

Operation Indicators

<table>
<thead>
<tr>
<th>Operation indicator</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>READY (Green)</td>
<td>Lit while power is being supplied.</td>
</tr>
<tr>
<td>SD/RD (Orange)</td>
<td>Lit while communicating with the host.</td>
</tr>
<tr>
<td>OCC (Orange)</td>
<td>Lit while a control output is ON.</td>
</tr>
<tr>
<td>ERROR (Red)</td>
<td>Lights or flashes when an error is detected.</td>
</tr>
</tbody>
</table>

Setting Switches

- Always turn OFF the power supply before setting the switches. The switch settings are read only when the power supply is turned ON.
- Use a flat-blade screwdriver to set the switches and be sure not to leave a switch set between two settings.

Communications Unit Number

Set a communications unit number on SW1 so that the host system can identify the Controller.

<table>
<thead>
<tr>
<th>Unit No.</th>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
<th>E</th>
<th>F</th>
</tr>
</thead>
<tbody>
<tr>
<td>00</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
</tr>
</tbody>
</table>

Note: A unique unit number must be set for each node (Controller) on the same communications line. Do not set the same unit number for more than one node. If 17 or more Units must be connected, refer to the G3ZA Multi-channel Power Controller User’s Manual (Cat. No. Z200).

Communications Baud Rate

Set the baud rate for communicating with the host system on SW2.

<table>
<thead>
<tr>
<th>Baud rate</th>
<th>9.6</th>
<th>19.2</th>
<th>38.4</th>
<th>57.6</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Do not set.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Default
**Connection Configuration**

### Single-phase SSR

- **R phase**
- **S phase**
- **T phase**

**Note:** Connect a power supply with the same phase as the SSRs to the load power supply terminals on the G3ZA.

### Three-phase SSR

- **R phase**
- **S phase**
- **T phase**

**Note:** Connect to one of the three phases on the load power supply input terminals of the G3ZA.

**Host Device Connection Example**

#### Example of Connection to EJ1 Modular Temperature Controller

- **Example of Connection to PLC**

**Example for Connecting Two SSRs**

- **Control power supply**
- **Load power supply**
- **Trigger signal**

**Port A (connector): USB connection possible using an E58-CIFQ1 (sold separately)**

**Port B: RS-485 (CompoWay/F)**

**CX-Thermo for setup**

**Host Devices**

**Heater**

**Power supply for Multi-channel Power Controller**

**Load power supply (for zero-cross detection)**
Upgraded Functions

1. Added soft-start optimum cycle control.
2. Added three-phase optimum cycle control.
3. Increased heater burnout detection to 150 A.
4. Achieved effective current value monitoring.
5. Changed current error detection from a fixed value to a variable value.
6. Changed detection time unit to seconds for communications errors.

New functions are marked with “V2.”

Identifying Upgraded Models

Check the label on the Power Controller or the box to determine the version. Models not marked “Ver. 2.0” are version 1.0.

Box Label

Safety Precautions

**WARNING**

Do not touch the terminals and the wires while power is being supplied. Doing so may possibly result in electric shock. Make sure that the terminal cover is installed before using the product.

**CAUTION**

Do not allow pieces of metal, wire clippings, or fine metallic chips or filings from installation to enter the product. Doing so may occasionally result in electric shock, fire, or malfunction.

Do not use the product in locations of flammable or explosive gases. Doing so may occasionally result in minor or moderate explosion, causing minor or moderate injury, or property damage.

Do not attempt to disassemble, repair, or modify the product. Doing so may occasionally result in minor or moderate injury due to electric shock.

Perform correct setting of the product according to the application. Failure to do so may occasionally cause unexpected operation, resulting in minor or moderate injury, or damage to the equipment.

Ensure safety in the event of product failure by taking safety measures, such as installing a separate monitoring system to provide alarms for preventing excessive temperature rise. Product failure may occasionally prevent control operation, resulting in damage to the connected facilities and equipment.

Tighten the terminal screws securely using a tightening torque within the following ranges. Loose screws may occasionally cause fire, resulting in minor or moderate injury, or damage to the equipment.

**Precautions for Safe Use**

1. Do not use the product in the following locations.
   - Locations subject to direct radiant heat from heating equipment
   - Locations where the product may come into contact with water or oil
   - Locations subject to direct sunlight
   - Locations where dust or corrosive gases (in particular, sulfuric or ammonia gas) are present
   - Locations subject to extreme temperature changes
   - Locations where icing or condensation may occur
   - Locations subject to excessive shocks or vibration

2. Use this product within the rated load and power supply.

3. Ensure that the rated voltage is achieved no longer than 2 s after turning the power ON.

4. Use/store within the rated temperature and humidity ranges.

5. Minimum mounting distance of G3ZA is 10 mm. When mounting the G3ZA near the SSRs, mount the G3ZA so as to not interfere with the heat dissipation of the SSR.

6. Use the specified size of insulated-type crimp terminals (M3, width: 5.8 mm max.) for wiring and attach insulative sleeves. To connect bare wires, use AWG22 (cross section: 0.326 mm²) to AWG14 (cross section: 2.081 mm²) to wire the power supply terminals and AWG22 (cross section: 0.326 mm²) to AWG16 (cross section: 1.039 mm²) for other terminals.

7. Be sure to confirm the correct terminal and polarity when wiring the terminal block and connectors.

8. Do not connect any conductors to unused terminals.

9. In order to prevent inductive noise, wire the lines connected to the product separately from power lines carrying high voltages or currents. Do not wire in parallel with or in the same cable as power lines. Other measures for reducing noise include running lines along separate ducts and using shield lines.

10. Attach a surge suppressor or noise filter to peripheral devices that generate noise (in particular, motors, transformers, solenoids, magnetic coils, or other devices that have an inductance component). Do not install the product near devices generating strong high-frequency fields or surges. When using a noise filter, check the voltage and current and install it as close to the product as possible.

11. For a safety disconnection of the power-line in the application, the equipment must be provided with disconnecting devices suitable for isolation. (e.g., circuit breakers defined in IEC60947-2, power switches defined in IEC60947-3, power plugs, etc.)

**Version 1.0 Usage Precautions**

Version 1.0 is for single-phase loads only. Connect a single-phase zero-cross SSR. Do not connect a three-phase SSR, or to an SSR that is not magnet relay or zero-cross.

**Version 2.0 Usage Precautions**

- Check the G3ZA settings and select the correct SSR from the following when wiring an SSR.
  - SSR with zero-cross function for single-phase heaters
  - SSR without zero-cross function for single-phase heaters
  - Three-phase SSR

Do not connect a magnet relay.

- Check the G3ZA settings and select the correct CT from the following when wiring a CT.
  - E54-CT1
  - E54-CT3
  - G3ZA-CT150L

Do not use the product in locations of flammable or explosive gases. Doing so may occasionally result in minor or moderate injury, or property damage.

Do not attempt to disassemble, repair, or modify the product. Doing so may occasionally result in minor or moderate injury due to electric shock.

Ensure safety in the event of product failure by taking safety measures, such as installing a separate monitoring system to provide alarms for preventing excessive temperature rise. Product failure may occasionally prevent control operation, resulting in damage to the connected facilities and equipment.

Tighten the terminal screws securely using a tightening torque within the following ranges. Loose screws may occasionally cause fire, resulting in minor or moderate injury, or damage to the equipment.

Terminal screws: 0.40 to 0.56 N·m
■ Precautions for Correct Use

Wiring
Use M3 crimp terminals.

Use wires that withstand a minimum of 70°C.

DIN Track
Secure the DIN Track with screws in at least three locations.
DIN Track: PFP-50N (50 cm)/PFP-100N (100 cm)

Mounting the G3ZA
Mount the G3ZA as shown in the diagram. First, pull down the DIN Track mounting hook (1) and hook the top of the G3ZA on the DIN Track (2). Then press the G3ZA onto the DIN Track far enough so that it can be locked in place (3) and push the DIN Track mounting hook up to lock the G3ZA in place (4).

Removing the G3ZA
Use a flat-blade screwdriver to pull down the DIN Track mounting hook (1) and then pull out on the bottom of the G3ZA (2).

Mounting End Plates
Be sure to mount an End Plate on each side of the G3ZA so that it does not slide on the DIN Track.

To mount an End Plate, hook the bottom of the End Plate on the bottom of the DIN Track (1), place the top of the End Plate on the DIN Track (2), and then pull down on the End Plate. Tighten the screw on the End Plate to secure it.

Note: Always mount one End Plate on each side of the G3ZA.

Installation Example
When installing the SSRs next to the G3ZA, provide sufficient space between the G3ZA and SSRs, as shown in the following diagram.
Reference example:
When applying 25 A to the G3PB-225B-VD (a manipulated variable of 100%), separate the SSRs from the G3ZA by at least 50 mm.
Do not touch the G3ZA while power is being supplied.

Mounting with Screws

Mounting Dimensions (Unit: mm)

Two, 4.2 dia. or M4
Solid State Relays
G3PA

Extremely Thin Relays Integrated with Heat Sinks

- Comply with VDE 0160 (finger protection), with a dielectric strength of 4,000 V between input and load.
- Downsizing achieved through optimum design of heat sink.
- Mounting possible via screws or via DIN track.
- Certified by UL, CSA, EN, and VDE (reinforced insulation).
- Recommended for use with the soft-start function of the G3ZA.

Close Mounting

SSR Mounting Pitch

Panel Mounting (At a rated ambient temperature of 40°C).

- Please reduce the ambient temperature of SSRs.
- The rated load current of an SSR is measured at an ambient operating temperature of 40°C.
- An SSR uses a semiconductor in the output element. This causes the temperature inside the control panel to increase due to heating resulting from the passage of electrical current through the load. To restrict heating, attach a fan to the ventilation outlet or air inlet of the control panel to ventilate the panel. This will reduce the ambient temperature of the SSRs and thus increase reliability. (Generally, each 10°C reduction in temperature will double the expected life.)

<table>
<thead>
<tr>
<th>SSR rated current (A)</th>
<th>10 A</th>
<th>20 A</th>
<th>30 A</th>
<th>40 A</th>
<th>60 A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Required number of fans per SSR</td>
<td>0.16</td>
<td>0.31</td>
<td>0.47</td>
<td>0.62</td>
<td>0.93</td>
</tr>
</tbody>
</table>

Example: For 10 SSRs with load currents of 20 A,
0.31 × 10 = 3.1
Thus, 4 fans would be required.
Size of fans: 92 mm², Air volume: 0.7 m³/min,
Ambient temperature of control panel: 30°C
If there are other instruments that generate heat in the control panel other than SSRs, additional ventilation will be required.

EMC Directive Compliance

The G3PA complies with EMC Directives under the following conditions.

- A film capacitor is connected to both sides of the load power supply output.
- The input power supply cable length for 200-V models is less than 10 m.

Loss Time

Loss time will increase if the G3PA is used at a low voltage or current. Check that there will be no problems with operation before using the G3PA.

Ventilation

- Be aware of air flow.
- Duct or airflow obstruction.
- Input cable length.
- Use short ducts.
- If the ducts cannot be shortened, place the SSR on a metal base so that it is not surrounded by the ducts.

Note: 1. If the air inlet or air outlet has a filter, clean the filter regularly to prevent it from clogging and ensure an efficient flow of air.
2. Do not locate any objects around the air inlet or air outlet, otherwise the objects may obstruct the proper ventilation of the control panel.
3. A heat exchanger, if used, should be located in front of the SSR Units to ensure the efficiency of the heat exchanger.
## Warranty and Application Considerations

### Warranty and Limitations of Liability

<table>
<thead>
<tr>
<th>WARRANTY</th>
</tr>
</thead>
<tbody>
<tr>
<td>OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.</td>
</tr>
<tr>
<td>OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>LIMITATIONS OF LIABILITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS, OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.</td>
</tr>
<tr>
<td>In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.</td>
</tr>
<tr>
<td>IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.</td>
</tr>
</tbody>
</table>

### Application Considerations

<table>
<thead>
<tr>
<th>SUITABILITY FOR USE</th>
</tr>
</thead>
<tbody>
<tr>
<td>OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.</td>
</tr>
<tr>
<td>Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.</td>
</tr>
<tr>
<td>Know and observe all prohibitions of use applicable to this product.</td>
</tr>
<tr>
<td>NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.</td>
</tr>
</tbody>
</table>

### Disclaimers

<table>
<thead>
<tr>
<th>CHANGE IN SPECIFICATIONS</th>
