Safety Relay Unit
G9SA

- Four kinds of 45-mm wide Units are available:
  - A 3-safety contact model, a 5-safety contact model, and models with 3 safety contacts and 2 OFF-delay safety contacts.
  - Also available are 17.5-mm wide Expansion Units with 3 safety contacts and 3 OFF-delay safety contacts.
- Two hand controller (type III C, EN 574)
- Simple expansion connection.
- OFF-delay models have 15-step OFF-delay settings.
- Conforms to EN standards. (BG approval)
- Approved by UL and CSA.
- Both DIN track mounting and screw mounting are possible.
- Suitable for PNP OSSD outputs of safety sensors, F3SN, F3SH, F3S-B, F3S-TGR, F3SL

</tbody>
</table>

Note: 1. The contact resistance was measured with 1 A at 5 VDC using the voltage-drop method.
2. The response time is the time it takes for the main contact to open after the input is turned OFF.
3. The insulation resistance was measured with 500 VDC at the same places that the dielectric strength was checked.
4. Weight shown is for 24-VAC/VDC type. For 100 to 240-VAC type, add approximately 20 g.
Application Examples

G9SA-301-T
G9SA-321-T
G9SA-TH301

Terminal Arrangement

Mounting Holes

Two, 4.2 dia. or M4

OFF-delay time setting switch (see note)

Connector cover

Note: The OFF-delay time setting switch is found on the G9SA-321-T only.

G9SA-EX301
G9SA-EX031-T

OFF-delay time setting switch (see note)

Note: The OFF-delay time setting switch is found on the G9SA-EX031-T only.
**Installation**

**Internal Connections**

**G9SA-301 (24 VAC/VDC)**

(See note 3.) (See note 1.)

**G9SA-501 (24 VAC/VDC)**

(See note 3.) (See note 1.)

**G9SA-321-T (24 VAC/VDC)**

(See note 3.) (See note 1.)

**G9SA-TH301 (24 VAC/VDC)**

(See note 1.)

**G9SA-EX301**

(See note 2.)

**G9SA-301 (100 to 240 VAC)**

(See note 3.) (See note 1.)

**G9SA-501 (100 to 240 VAC)**

(See note 3.) (See note 1.)

**G9SA-321-T (100 to 240 VAC)**

(See note 3.) (See note 1.)

**G9SA-TH301 (100 to 240 VAC)**

(See note 2.)

**Note:**

1. Use terminals A and B to switch reset mode.
   - A to B open: Manual reset
   - A to B closed: Auto-reset
2. Use terminals C and D to switch input conditions.
   - C to D open: DPDT input.
   - C to D closed: DPST-NC input. (Make sure T11 and T21 are open.)
3. Use terminal T23 with + common 2-channel input. When using T23, make sure that T21 and T22 are open. For 1-channel input, make sure T12 and T23 are closed.
4. With 100 to 240-VAC type, be sure to connect PE to a protective ground. With 24-VAC/VDC type, if the power supply is not connected to a protective ground, be sure to connect PE to a protective ground.
5. With 24-VAC/VDC type, the power supply terminals A1 and A2 have polarities. A2 is the negative pole.
Precautions

Do not touch the terminal area of the Relays or the socket terminal area (charged area) while power is ON. Electric shock will result.

Wiring

Turn OFF the G9SA before wiring the G9SA. Do not touch the terminals of the G9SA while the power is turned ON, because the terminals are charged and may cause an electric shock.

Use the following to wire the G9SA.
- Stranded wire: 0.75 to 1.5 mm²
- Solid wire: 1.0 to 1.5 mm²

Tighten each screw to a torque of 0.78 to 1.18 N·m, or the G9SA may malfunction or generate heat.

External inputs connected to T11 and T12 or T21 and T22 of the G9SA-301 must be no-voltage contact inputs.

PE is a ground terminal.

When a machine is grounded at the positive, the PE terminal should not be grounded.

Mounting Expansion Units

Turn OFF the G9SA before connecting the Expansion Unit.

When an Expansion Unit is being used, remove the connector cover from the G9SA Safety Relay Unit (G9SA-301, G9SA-501, G9SA-321# or G9SA-TH301) and insert the connector of the Expansion Unit's connector cable.

Applicable Safety Category (EN954-1)

G9SA-series Relays meet the requirements of Safety Category 4 of the EN954-1 standards when they are used as shown in the examples provided by OMRON. The Relays may not meet the standards in some operating conditions. The OFF-delay output of models G9SA-321-T# and EX031-T#, however, conform to Safety Category 3.

The applicable safety category is determined from the whole safety control system. Make sure that the whole safety control system meets EN954-1 requirements.

Mounting Multiple Units

When mounting multiple Units close to each other, the rated current will be 3 A. Do not apply a current higher than 3 A.

Connecting Inputs

If using multiple G9SA models, inputs cannot be made using the same switch. This is also true for other input terminals.

Earth Short

A positive thermistor is built into the G9SA circuits, so you can detect earth short breakdowns and breakdown shorts between channel 1 and channel 2. If the short breakdown is canceled, reset is automatic.
