Safety Network Controller
## NX Series

CIP Safety™

Safety over **EtherCAT**®

CIP Safety™

Sti SAFETY, TECHNOLOGY & INNOVATION

Quick, easy and flexible integration of production line safety

Scalable from large automotive production lines to small parts production lines

Quick and easy safety program design

Efficient safety management and maintenance

Manufacturers require flexible systems for global production and high-mix production.

System designs have become more and more complicated because these flexible systems need safety control according to control programs.

However, it is also required to reduce design and maintenance time to efficiently build various systems.

In order to meet these needs, we offer a new NX Safety Network Controller.

Safety control for large systems

EtherNet/IP™

EtherNet/IP™ is a widely used and vendor-independent industrial Ethernet network that is managed by ODVA.

CIP Safety

The Common Industrial Protocol (CIP™) is an industry standard open network, enabling seamless communication among CIP networks. CIP Safety™ adds safety functionality to CIP networks.

EtherCAT®

EtherCAT® is an industrial real-time communication network promoted by EtherCAT Technology Group (ETG).

Safety over EtherCAT®

Safety over EtherCAT (FSoE) allows a single communication system to be used for both control and safety data.

Flexible safety system for large-scale production

EtherNet/IP for safety across the world

Production systems have to meet worldwide standards because of the globalization of production.
CIP Safety is a protocol for transmitting safety data via EtherNet/IP that is adopted by factory automation and robot manufacturers all over the world. Using CIP Safety, you can build globally standardized networks and simplify the global procurement of production systems.

One connection using CIP Safety

Safety systems for industrial robots are becoming increasingly used; networks can be easily built with the NX-CSG Communication Control Unit and NX-SL5 Safety CPU Units which support CIP Safety.

EtherNet/IP brings flexibility

Multiple network ports enable a safety network to be divided into several segments, making it easy to connect many network devices required for a large production line. This allows flexibility to add or remove devices from existing safety systems.

EtherNet/IP port 1

EtherNet/IP port 2A

EtherNet/IP port 2B

Safety control between lines   : Port 1
Robot control within process   : Port 2A, 2B
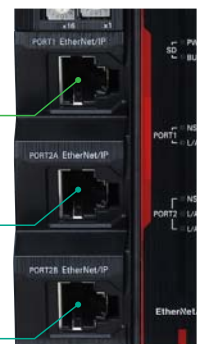

Fast and fixed response cycle facilitates reconfiguration

The NX-CSG320 Communication Control Unit and NX-SL5 Safety CPU Unit provide safety communications via CIP safety and at the same time provides local high-speed safety I/O control. With a local I/O response time as low as every 50 ms, the NX-SL5 Safety CPU Unit can be used for applications where a high level of responsiveness is required.
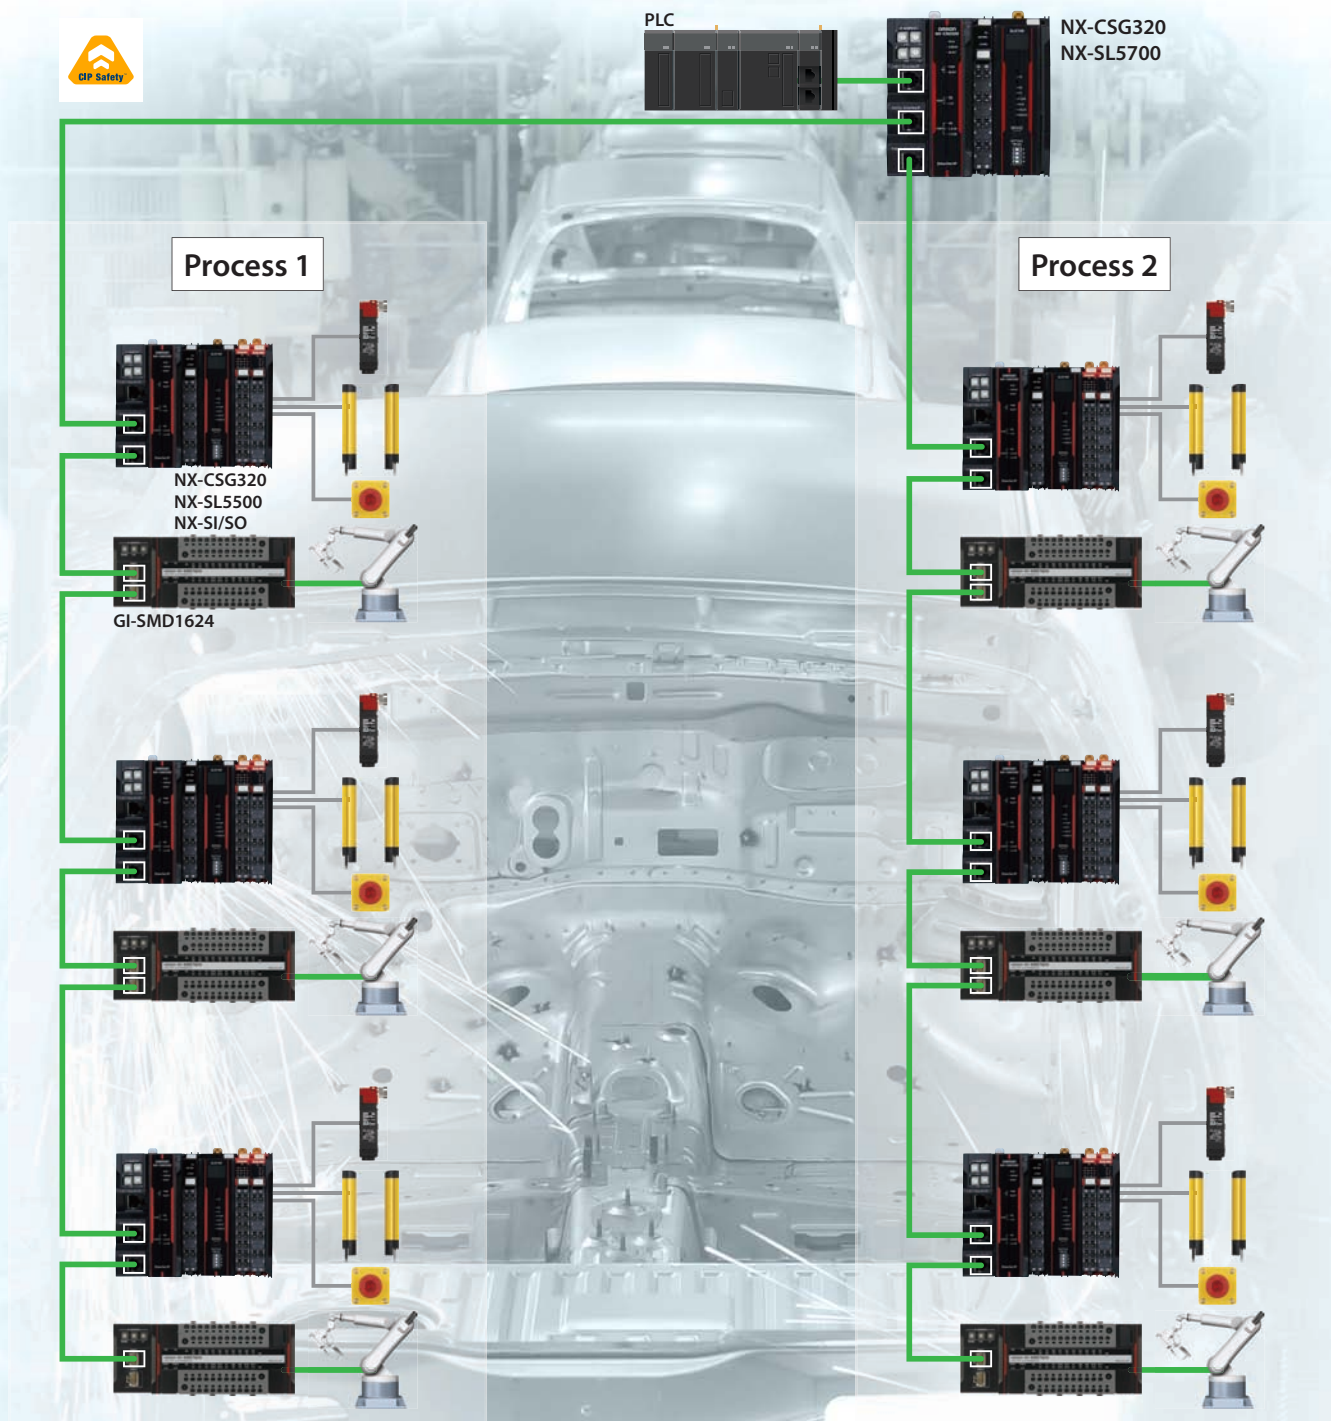

* Calculate the response speed of your system taking the performance of I/O devices into consideration. Refer to the manual for details.

Fastest cycle time:
50 ms
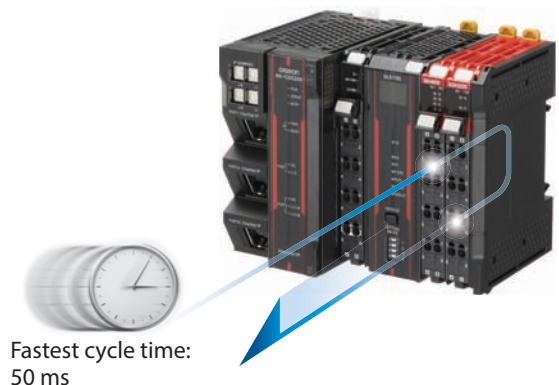

Standardize the safety system network for a large robot system

System configuration

In this example, devices and machines communicate via EtherNet/IP and CIP Safety in this system.
Each process includes robots, safety light curtains, emergency stop switches, and other safety components. The NX-CSG Communication Control Unit and NX-SL5 Safety CPU Unit execute safety control programs in each process. CIP Safety is used for safety interlocking between processes and for building a safety control network across the system.

Interlocking between various machines

Simple configuration

CIP Safety allows safety devices and standard devices to be mixed on the same network, providing safety interlock control between machines. CIP Safety robots and remote I/O terminals can be easily connected.
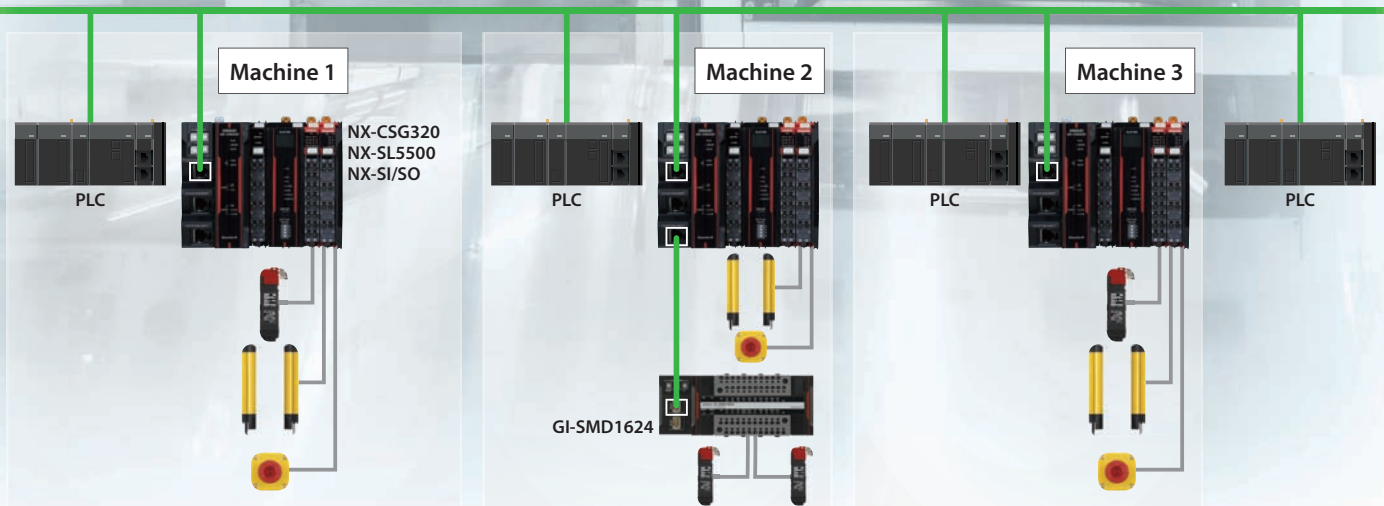

Modular processes bring flexibility to line layouts

The NX-CSG320 Communication Control Unit and NX-SL5 Safety CPU Unit exchange interlock signals with other machines while implementing safety control within the machine. Programs for machine control and safety control can be created for each machine. This modularized design helps standardize design and improve design efficiency.

Modular machines with individual CPU units

System configuration

Machine 1 and 3 are processing machines with the control program and safety control program for each machine. Machine 2 is a material handling machine that transports products processed by Machine 1 and 3 to the next process. The NX-CSG320 Communication Control Unit and NX-SL5 Safety CPU Unit are used for all machines, and CIP Safety is used for safety interlocking between machines.

Two different networks in a single system

The NX-SL5 Safety CPU Unit connected with the NX102 Machine Automation Controller enables the use of both EtherCAT + FSoE (Safety over EtherCAT) and EtherNet/IP + CIP Safety at the same time.
In addition to interlock control within a machine via FSoE, safety interlock between machines can be implemented using CIP Safety.

## Integrated safety into high-speed machine control

The NX-SL5 Safety CPU Unit combination with the NX102 Machine Automation Controller , provides both safety control and machine control with fast cycle times.
By mounting the NX-SL Safety CPU Unit and safety I/O units to the NX102 and by connecting the servo drives via FSoE on EtherCAT, you can configure a simple motion and safety control system using high-speed networks.

Line safety control and fast machine control at the same time
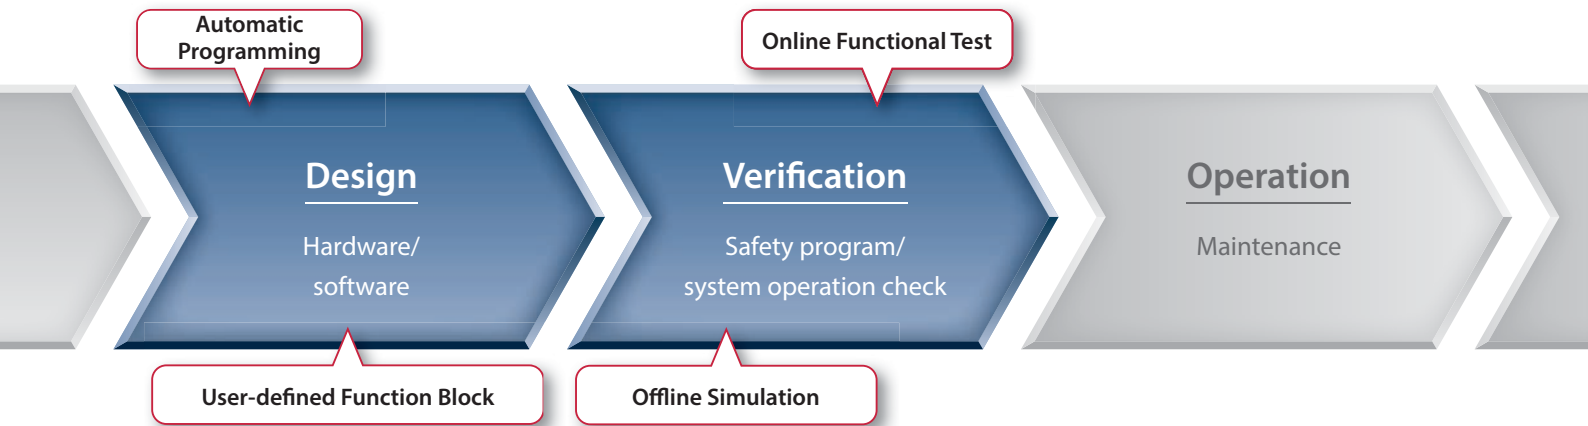

System configuration

The NX102 Machine Automation Controller and NX-SL5 Safety CPU Unit are used in Machine 1 and 2 to build a system with safety network and real-time control capabilities using EtherCAT. The machine status is reported to the host system and displayed on the HMI connected on the same network.

Improve design productivity

The Automation Software Sysmac Studio provides various functionalities to reduce time required for production system design and safety program verification.

Automatic Programming

Online Functional Test

Design

Hardware/
software

Verification

Safety program/
system operation check

Operation

Maintenance

User-defined Function Block

Offline Simulation

Design ▶ Reduce time required for production system design

Automatic Programming

Create a truth table using input, output, and stop conditions of safety devices to automatically create a safety program for a simple machine.

* Programs created by Automatic Programming will not guarantee functional safety.
Refer to the User's Manual (Cat. No. Z395) for details.

User-defined Function Block (FB)

Programs can be easily converted into a user-defined function block (FB); help files can be attached to describe input and output conditions as well as the functionality of the program within the function block (FB). Different security levels can be set to protect the function block from viewing and unauthorized modifications.

* User-defined FBs can be used as modular software components according to the hardware configuration. They help standardize programs and maintain the consistency of design quality.
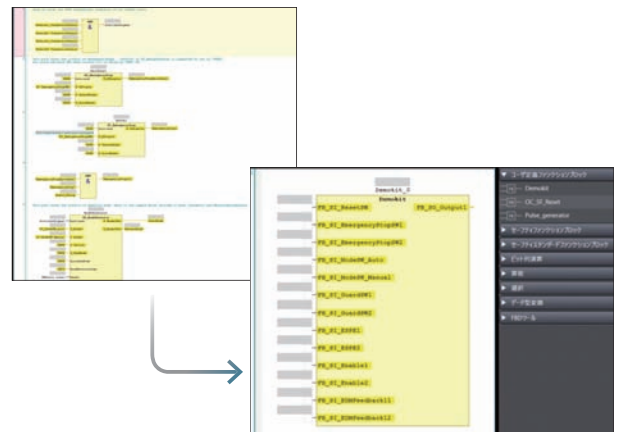

Verification

Implement safety management without experts and global standardization

Offline Simulation

Programs can be simulated on your PC, Sysmac Studio allows verification of programs without connecting hardware.

Online Functional Test

Online Functional Test enables operation of safety functions to be checked when the NX-SL5 Safety CPU Unit is online with Sysmac Studio. The test results can be output as a report along with the safety signature; the safety signature is displayed on the seven-segment display of the NX-SL5 Safety CPU Unit, and can easily checked if the configuration matches the report after the program has been validated.

SL5700

32

TS

NS

FS

Safety Signature:#BF32
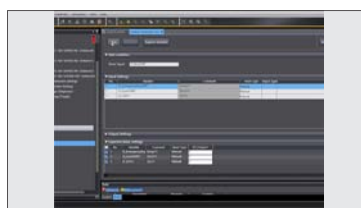

[Preparation]
Start the Sysmac Studio and go online with the NX-SL5. Register the safety devices to test and set the expected values of each signal.

[Testing]
Operate safety devices by following the instructions on the screen. Check if each device operates correctly and input the check results.

[Tests completed]
The test results are listed after all tests have been completed. The list can be output as a CSV file.

[Printing test results]
The test details, results, and executed date and time can be output as a PDF file. The names of the tester and approver can be added. The safety signature code, which identifies the validated program, is included at the bottom right of the report.

Maintenance without PC

No PC is required for maintenance, which reduces production system maintenance work and minimizes system downtime.

Restore, ACR

Design	**Verification**	**Operation**
Hardware/ software	Safety program/ system operation check	Maintenance

Safety Data Logging

Operation ▶ Minimize system downtime

Safety Data Logging

An SD card containing logging settings is used for Safety Data Logging.
When start trigger conditions are met, the specified device variables and exposed variables can be logged in a chronological order and output to the memory card. This function helps to quickly identify the cause of a sudden stoppage of the system and determine preventive measures.

Operation ▶ Reduce maintenance work

Safety Unit Restore

Programs and settings can be stored on an SD card inserted into the communication control unit. When the safety CPU unit is replaced, the stored programs and settings can be easily copied to a new unit using the SD card.

ACR (Automatic Configuration Restart)

When replacing a safety I/O unit, just remove the old unit and mount a new one. The setting data is automatically downloaded. When replacing a safety I/O terminal, remove the memory cassette from the old terminal and install it into the new terminal to inherit the settings. No software is required. (See page 34)

NX Safety Controller
Safety Control Unit
NX-SL3/SI/SO
	Integration of safety into machine automation enables simple, flexible system configuration
	● Fully integrate safety and standard control in one network by connecting with an NX EtherCAT Coupler Unit
	● Safety CPU unit: Up to 128 safety I/O units
	● Safety input unit: 8 or 4 safety input points per unit
	  4-channel units can be directly connected with Omron non-contact switches and single-beam sensors
	● Safety output unit: 2 or 4 safety output points per unit
	  Output breaking current of 2.0 A (2-channel units)
	● PLCopen® Function Blocks for Safety
	● Standard IEC 61131-3 programming
		(Cat. No.) F100
		(Cat. No.) F101

Safety Network Controller **NE1A-SCPU Series**	**Acts as a DeviceNet Safety master and slave and hosts the safety application program** ● NE1A-SCPU01-V1 with built-in 16 safety inputs and 8 safety outputs ● NE1A-SCPU02 with built-in 40 safety inputs and 8 safety outputs ● Simplifies safety systems. With safety network master capabilities, up to 32 safety nodes ● Safety system can be monitored by standard controller via DeviceNet	Refer to your local OMRON website
Safety Network Controller **NE1A-SCPU0□-EIP**	**Acts as a DeviceNet Safety master and slave and monitors safety system via EtherNet/IP** ● Connect with Omron PLC via EtherNet/IP for easy maintenance ● Simplifies safety systems. With safety network master capabilities, up to 32 safety nodes ● No external devices required for connecting to EtherNet/IP	Refer to your local OMRON website
Safety Network Controller **NE0A-SCPU01**	**As a standalone controller as well as a DeviceNet Safety slave** ● TÜV-certified templates for safety applications with up to 12 inputs ● Reusable user-defined safety circuit templates for easy standardization ● NE0A operating status can be monitored by standard DeviceNet master	Refer to your local OMRON website
Safety Controller **G9SP Series**	**Standalone safety controller** ● Easy programming for complex safety control ● Unique programming software (G9SP Configurator) to support easy design and verification	(Cat. No.) F090

NX-series Communication Control Unit/Safety Control Units
NX-CSG/SL5/SI/SO

Quick, easy, and flexible to integrate safety into production lines

- Two built-in CIP Safety on EtherNet/IP ports
- Up to 254 connections (NX-SL5700)
- Up to 32 NX Units per Communication Control Unit
- Innovative automation software
    Automatic Programming
    Safety Data Logging
    Online Functional Test
- Meets EN ISO 13849-1 (PLe/Safety Category 4) and IEC 61508 (SIL3)

∗ The Common Industrial Protocol (CIP™) is an industry standard open network, enabling seamless communication among CIP networks. CIP Safety™ adds safety functionality to CIP networks.

∗ Safety over EtherCAT (FSoE): The open protocol Safety over EtherCAT (abbreviated with FSoE "Safety over EtherCAT") defines a safety related communication layer for EtherCAT. Safety over EtherCAT meets the requirements of IEC 61508 SIL 3 and enables the transfer of safe and standard information on the same communication system without limitations with regard to transfer speed and cycle time.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Features

- CIP Safety on EtherNet/IP Is Supported
- Feature EtherNet/IP Communications Port
- The Standard Unit of NX-series Available
- Excellent Connectability with OMRON Safety I/O Devices
- Support for the IEC 61131-3 Programming Environment
    - Program Languages Based on the IEC 61131-3 International Standard
    - Programming with Variables
- Complete Advanced Validation
    - Checking Safety Programs and Safety Parameters
    - Debugging

CPU Rack Configuration

The following shows the CPU Rack Configuration, where NX Units are mounted to a CPU Rack. The CPU Rack is configured with a Communication Control Unit, a Safety CPU Unit, Safety I/O Units, other NX Units, and an End Cover mounted to it.
The number of NX Unit connections is up to 32 units.
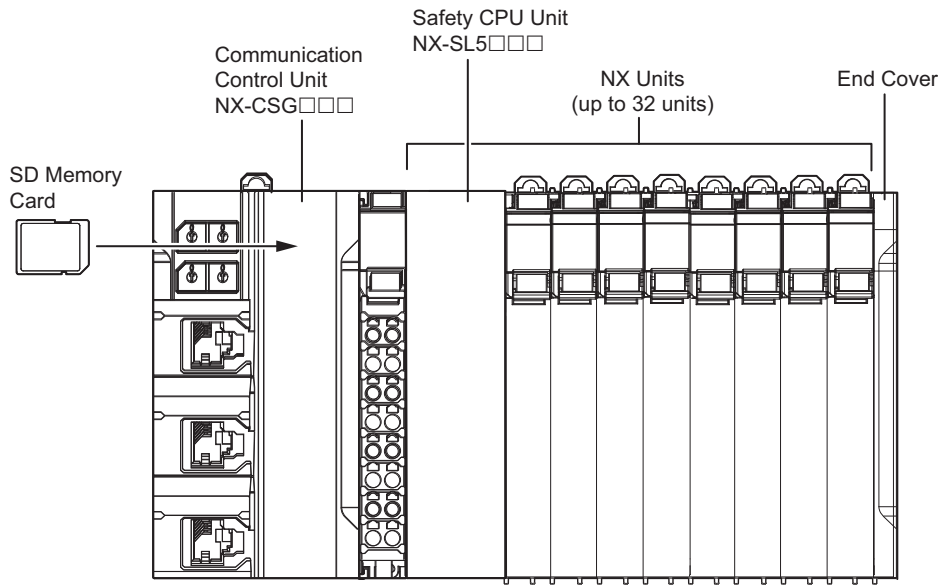

Configuration		Remarks
Communication Control Unit NX-CSG□□□		One required for every CPU Rack.
End Cover		Must be connected to the right side of the CPU Rack. One end cover is provided with the Communication Control Unit as a standard accessory.
NX Unit	Safety CPU Unit NX-SL5□□□	Up to 32 units can be mounted onto the CPU Rack. One Safety CPU Unit is required for each CPU Rack. Refer to *NX-series Safety Control Unit/Communication Control Unit User's Manual* (Cat. No. Z395) for the NX Units that you can connect.
	Safety Input Unit	
	Safety Output Unit	
	Other NX Units	
SD Memory Card		Install as required.

The NX-series Communication Control Units are also registered for RCM, EAC, and KC compliance.
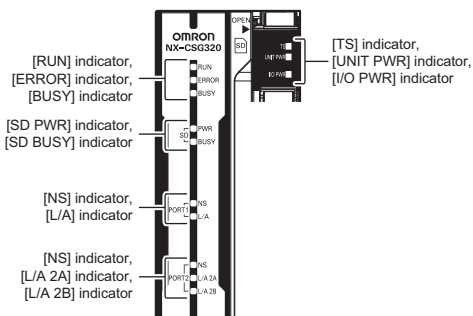

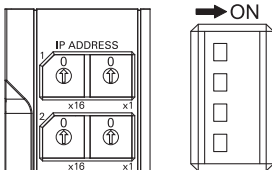

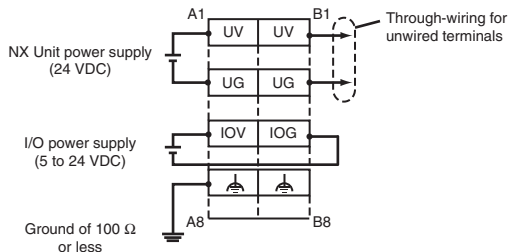

General Specifications

Item		Specification
Enclosure		Mounted in a panel (open)
Grounding method		Ground to 100 Ω or less
Operating environment	Ambient operating temperature	0 to 55°C
	Ambient operating humidity	10% to 95% (with no condensation or icing)
	Atmosphere	Must be free from corrosive gases.
	Ambient storage temperature	−25 to 70°C (with no condensation or icing)
	Altitude	2,000 m max.
	Pollution degree	2 or less: Conforms to JIS B3502 and IEC 61131-2.
	Noise immunity	Conforms to IEC 61131-2. 2 kV on power supply line
	Insulation class	Class III (SELV)
	Overvoltage category	Category II: Conforms to JIS B3502 and IEC 61131-2.
	EMC immunity level	Zone B
	Vibration resistance	Conforms to IEC 60068-2-6. 5 to 8.4 Hz with 3.5-mm amplitude 8.4 to 150 Hz, acceleration of 9.8 m/s^2 100 minutes each in X, Y, and Z directions (10 sweeps of 10 min each = 100 min total)
	Shock resistance	Conforms to IEC 60068-2-27. 147 m/s^2, 3 times each in X, Y, and Z directions
	Insulation resistance *	20 MΩ between isolated circuits (at 100 VDC)
	Dielectric strength *	510 VAC for 1 min between isolated circuits, leakage current: 5 mA max.
Installation method		DIN Track (IEC 60715 TH35-7.5/TH35-15)

* The specification is for the Communication Control Unit, Safety Input Unit, and Safety Output Unit, not for the Safety CPU Unit.

Dimensions ✻1	72 × 100 × 90 mm (W × H × D)
Weight ✻2	390 g
Number of NX Units that you can connect	32 units or less
Number of communications that can be set between NX Units	254 ports max. ✻3

Unit power supply	Power supply voltage	24 VDC (20.4 to 28.8 VDC)
	Unit power consumption ✻4	5.95 W
	Inrush current ✻5	For cold start at room temperature: 10 A max./0.1 ms max. and 2.5 A max./150 ms max.
	Current capacity of power supply terminal ✻6	4 A
	Isolation method	No isolation: Between the Unit power supply terminal and internal circuit
Power supply to the NX Unit power supply	NX Unit power supply capacity	10 W max.
	NX Unit power supply efficiency	80%
	Isolation method	No isolation: Between the Unit power supply terminal and NX Unit power supply
I/O power supply to NX Units	Power supply voltage	5 to 24 VDC (4.5 to 28.8 VDC)
	Maximum I/O power supply current	4 A
Current consumption from I/O power supply		10 mA max. (24 VDC)
External connection terminals		Screwless clamping terminal block (8 terminals)
Terminal connection diagram		UV/UG: Unit power supply terminals IOV/IOG: I/O power supply terminals
Accessories		End cover (NX-END02): 1 pc.
Installation orientation and restrictions		Only upright installation orientation

✻1. Includes the End Cover, and does not include projecting parts.
✻2. Includes the End Cover. The weight of the End Cover is 82 g.
✻3. Includes the SD Memory Card. The NX Unit power consumption to NX Units is not included.
✻4. This is the inrush current value when the power supply turns ON after it has been OFF.
The inrush current may vary depending on the operating condition and other conditions. Therefore, select fuses, breakers, and external power supply devices that have enough margin in characteristic and capacity, considering the condition under which the devices are used.
Especially when you turn the power ON/OFF through a switch inserted to the external DC power supply, cycling power ON-OFF-ON within one second will cause the inrush current of approx. 30 A/0.3 mA to occur since the inrush current limiter circuit fails to limit the current.
✻5. The amount of current that can be passed constantly through the terminal. Do no exceed this current value when you use a through-wiring for the Unit power supply.
✻6. The actual configurable number can be calculated as follows: 254 - <Number of CIP Safety connections configured> - <Number of FSoE connections configured>

Built-in EtherNet/IP Port Specifications

The following table shows the specifications of the built-in EtherNet/IP port of the Communication Control Unit.

Item		Specification
		NX-CSG-□□□
Communications protocol		TCP/IP or UDP/IP
Supported services		Sysmac Studio connection, tag data links, CIP message communications, FTP server, automatic clock adjustment (NTP client), SNMP (agent), DNS (client), BOOTP (client), TCP/UDP message service
Number of logical ports		2 (With IP routing function)
Physical layer		100Base-TX or 10Base-T (100Base-TX is recommended.) ∗1
Transmission specifications	Media access method	CSMA/CD
	Modulation	Baseband
	Transmission paths	Star form
	Baud rate	100 Mbps (100BASE-TX)
	Transmission media	Shielded twisted-pair (STP) cable, Category 5, 5e or higher
	Transmission distance	100 m max. (distance between hub and node)
	Number of cascade connections	The built-in switching ports support up to 50 nodes. There is no limitation when an external Ethernet switch is used.
CIP Safety routing	Maximum number of routable CIP Safety connections	254 total For multi-cast connections, 128 total
	Maximum routable Safety data length per connection	32 bytes
CIP service: Tag data links (cyclic communications)	Number of connections	32/Logical ports (total of 64 with two logical ports)
	Packet interval (refresh cycle)	1 to 10,000 ms in 1-ms increments
		Packet intervals can be set independently for each connection. (Data is refreshed over the network at preset intervals and does not depend on the number of nodes.)
	Allowed communications bandwidth per Unit	12,000 pps ∗2
		Note: The heartbeat and CIP Safety routing are included.
	Number of registrable tags	1024/Logical ports (total of 2048 with two logical ports)
	Tag types	Network variables
	Number of tags per connection (=1 tag set)	32 (31 tags if Controller status is included in the tag set.)
	Maximum link data size per node	46,208 bytes/Logical ports 92,416 bytes total
	Maximum data size per connection	1,444 bytes ∗3
	Number of registrable tag sets	Data concurrency is maintained within each connection.
		32 per port (1 connection = 1 tag set) (total of 40 with two logical ports) ∗4
	Maximum size of 1 tag set	1,444 bytes (Two bytes are used if Controller status is included in the tag set.)
	Multi-cast packet filter ∗5	Supported.
CIP message service: Explicit messages ∗6	Class 3 (number of connections)	Connections: 16/Logical ports (total of 32 with two logical ports) (server only)
	UCMM (unconnected)	Maximum number of clients that can communicate at one time: 16 per port (total of 32 with two logical ports) Maximum number of servers that can communicate at one time: 16 per port (total of 32 with two logical ports)
TCP/UDP message service	Maximum number of clients that can communicate at one time	16 per port (total of 32 with two logical ports)
	Maximum message size	Request: 492 bytes Response: 496 bytes
SNMP	Agent	SNMPv1, SNMPv2c
	MIB	MIB-II
EtherNet/IP conformance test		Conforms to CT14
Ethernet interface		10BASE-T or 100BASE-TX Auto negotiation or fixed settings

∗1. If tag data links are being used, use 100Base-TX.
∗2. Here, pps means "packets per second" and indicates the number of packets that can be processed in one second.
∗3. To use a data size of 505 bytes or higher, the system must support a large forward open (an optional CIP specification).
The CS, CJ, NJ, and NX-series Units support a large forward open, but before connecting to nodes of other companies, confirm that those devices also support it.
∗4. If more than 40 tag sets are registered in total, the *Tag Data Link, Too Many Tag Sets Registered (840E0000 hex)* event will occur.
∗5. Because the built-in EtherNet/IP port is equipped with an IGMP client (version 2), unnecessary multicast packets can be filtered out by an Ethernet switch that supports IGMP Snooping.

∗**6.** The built-in EtherNet/IP port uses the TCP/UDP port numbers shown in the following table.
Do not set the same port number for more than one TCP/UDP service.

Service	Type	Port number	Remarks
Tag data links	UDP	2222	Fixed values
Used by system	UDP	2223, 2224	
	TCP	9610	
CIP messages	TCP	44818	
FTP client (Data transfer port)	TCP	20	
DNS client	TCP/UDP	53	
BOOTP client	UDP	68	
HTTP server	TCP	80	
Used by system, other	TCP/UDP	9600	You can change the port number in the Unit Settings on the Sysmac Studio.
FTP client (Control port)	TCP	21	
TCP/UDP message service	TCP/UDP	64000	
NTP client	UDP	123	
SNMP agent	UDP	161	
SNMP trap	UDP	162	

Safety Control Units

Safety CPU Units NX-SL5500/SL5700
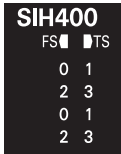

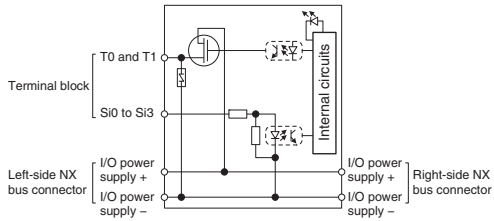

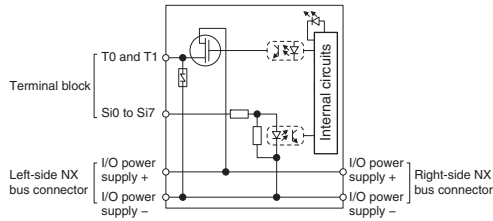

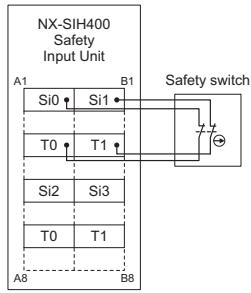

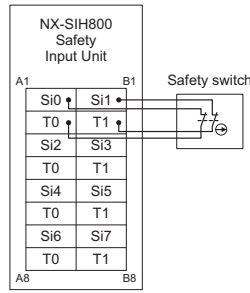

Unit name	Safety CPU Unit	
Model	NX-SL5500	NX-SL5700
Maximum number of safety I/O points	1024 points	2032 points
Program capacity	2048 KB	4096 KB
Number of safety master connections ∗1	128	254
Number of CIP Safety originator connections	128	254
Number of CIP Safety target connections	4	4
Number of originators that can be connected with a multi-cast connection	8	8
Number of FSoE master connections	128	254
I/O refreshing method	Free-Run refreshing	
External connection terminals	None	
Indicators	[TS] indicator, [NS] indicator, [FS] indicator, [P ERR] indicator, [RUN] indicator, [VALID] indicator, [DEBUG] indicator, seven-segment indicator 	[TS] indicator, [NS] indicator, [FS] indicator, [P ERR] indicator, [RUN] indicator, [VALID] indicator, [DEBUG] indicator, seven-segment indicator
Hardware switch settings	[SERVICE] switch, [SETTING] switch 	[SERVICE] switch, [SETTING] switch
Dimensions	30 × 100 × 71 mm (W × H × D)	
I/O power supply method	Not supplied.	
Current capacity of I/O power supply terminals	No I/O power supply terminals	
NX Unit power consumption	3.35 W max. ∗2	
Current consumption from I/O power supply	No consumption	
Weight	130 g max.	
Installation orientation and restrictions	Installation orientation: Upright installation Restriction ∗3: None.	

∗**1.** This is the maximum number of Safety I/O connections that can be set to this Unit. The value is the total number of CIP Safety originator connections, CIP Safety target connections, and FSoE master connections.
∗**2.** The cable length for the Units (Communication Control Unit and Power Supply Unit for NX Units) that supply power to the corresponding Unit must be up to 20 m.
∗**3.** Only NX102 CPU Units and Communication Control Units can be connected. NX1P2 CPU Units or Communications Coupler Units cannot be connected.
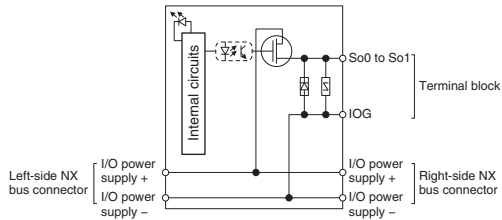

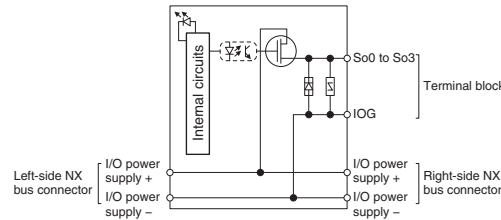

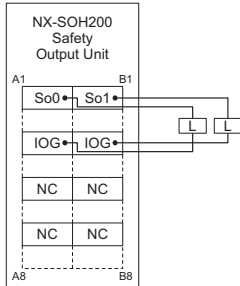

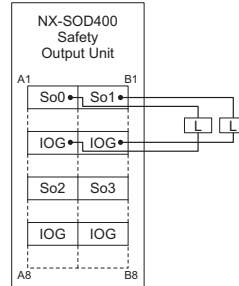

Safety Input Units NX-SIH400/SID800

| Unit name	Safety Input Unit	
Model	NX-SIH400	NX-SID800
Number of safety input points	4 points	8 points
Number of test output points	2 points	2 points
Internal I/O common	PNP (sinking inputs)	
Rated input voltage	24 VDC (20.4 to 28.8 VDC)	
OMRON special safety input devices	Can be connected.	Cannot be connected.
Number of safety slave connections	1	
I/O refreshing method	Free-Run refreshing	
External connection terminals	Screwless clamping terminal block (8 terminals)	Screwless clamping terminal block (16 terminals)
Indicators	[TS] indicator, [FS] indicator, [IN] indicator, [IN ERR] indicator SIH400 FS☐ ☐TS 0 1 2 3 0 1 2 3	[TS] indicator, [FS] indicator, [IN] indicator, [IN ERR] indicator SID800 FS☐ ☐TS 0 1 0 1 2 3 2 3 4 5 4 5 6 7 6 7
Safety input current	4.5 mA TYP.	3.0 mA TYP.
Safety input ON voltage	11 VDC min.	15 VDC min.
Safety input OFF voltage/OFF current	5 VDC max., 1 mA max.	
Test output type	Sourcing outputs (PNP)	
Test output load current	25 mA max.	50 mA max.
Test output residual voltage	1.2 V max. (Between IOV and all output terminals)	
Test output leakage current	0.1 mA max.	
Dimensions	12 × 100 × 71 mm (W × H × D)	
Isolation method	Photocoupler isolation	
Insulation resistance	20 MΩ min. between isolated circuits (at 100 VDC)	
Dielectric strength	510 VAC for 1 min between isolated circuits, leakage current: 5 mA max.	
I/O power supply method	Power supplied from the NX bus	
Current capacity of I/O power supply terminals	No applicable terminals.	
NX Unit power consumption	• Connected to a CPU Unit or a Communication Control Unit 1.10 W max. • Connected to a Communications Coupler Unit 0.70 W max.	• Connected to a CPU Unit or a Communication Control Unit 1.10 W max. • Connected to a Communications Coupler Unit 0.75 W max.
Current consumption from I/O power supply	20 mA max.	
Weight	70 g max.	
Circuit layout

Unit name	Safety Output Unit	
Model	NX- SOH200	NX- SOD400
Installation orientation and restrictions	Installation orientation: • Connected to a CPU Unit or a Communication Control Unit ✲ Possible in the upright installation orientation. • Connected to a Communications Coupler Unit 6 possible orientations Restrictions: For upright installation, the ambient temperature is restricted as shown below depending on the total Unit load current. For all installation orientations other than upright installation, the ambient temperature is restricted as shown below according to the total Unit load current. 	Installation orientation: • Connected to a CPU Unit or a Communication Control Unit ✲ Possible in the upright installation orientation. • Connected to a Communications Coupler Unit 6 possible orientations. Restrictions: None
Protective functions	Overvoltage protection circuit and short detection (test outputs)	

✲ Only NX102 CPU Units and Communication Control Units can be connected. NX1P2 CPU Units cannot be connected.

Function Specifications

Refer to your local OMRON website for function specifications of the Communication Control Unit and Safety Control Unit.

NX-CSG/SL5/SI/SO

Version Information

Relationship between the Unit Versions of Safety Control Units and Sysmac Studio Versions

This section describes the combinations that can be used of the unit versions of the Safety Control Unit and the Communication Control Unit, and the version of the Sysmac Studio.

Safety Control Units

NX Unit		Corresponding unit version/version	
Model	Unit version	Communication Control Unit	Sysmac Studio
NX-SL5500	Ver. 1.3	Ver. 1.01	Ver. 1.24 *1
NX-SL5700	Ver. 1.3	Ver. 1.01	Ver. 1.24 *1
NX-SIH400	Ver. 1.0	Ver. 1.00	Ver. 1.24 *2
NX-SIH400	Ver. 1.1	Ver. 1.00	Ver. 1.24 *2
NX-SID800	Ver. 1.0	Ver. 1.00	Ver. 1.24 *2
NX-SOD400	Ver. 1.0	Ver. 1.00	Ver. 1.24 *2
NX-SOH200	Ver. 1.0	Ver. 1.00	Ver. 1.24 *2

*1. The data types in the following table are supported for communications between NX Units.

Supported data types
BOOL
BYTE
INT
WORD
DINT

*2. Communications between NX Units are not supported.

Configuration Unit

Refer to the user's manuals for information on the NX Units that can be connected to the NX-series Communication Control Unit.

Communication Control Unit

System Units

Unit	Model
Additional NX Unit Power Supply Unit	NX-PD1000
Additional I/O Power Supply Unit	NX-PF0630, NX-PF0730
I/O Power Supply Connection Unit	NX-PC0010, NX-PC0020, NX-PC0030
Shield Connection Unit	NX-TBX01

External Interface

Communication Control Unit NX-CSG320
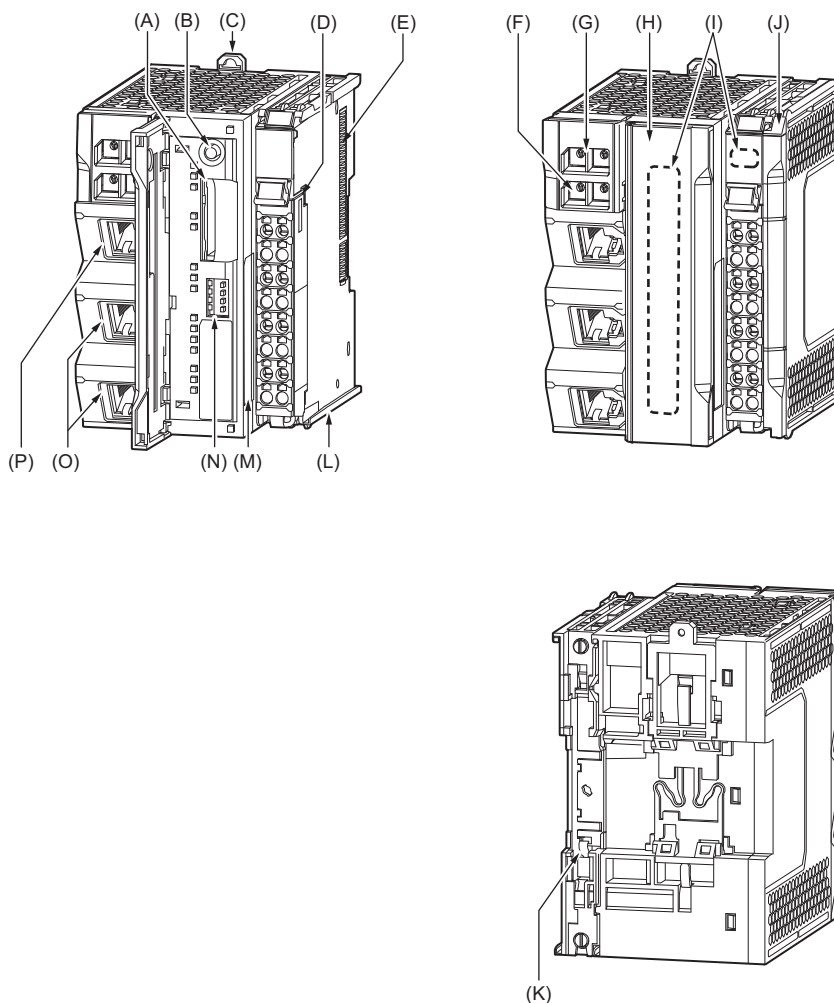

| Letter	Name	Function
(A)	SD Memory Card connector	Connects the SD Memory Card to the Communication Control Unit.
(B)	SD Memory Card power supply switch	Turns OFF the power supply so that you can remove the SD Memory Card.
(C)	DIN Track mounting hooks	These hooks are used to mount the Unit to a DIN Track.
(D)	Terminal Block	Used for wiring the power supply and functional grounding wire.
(E)	NX bus connector	This connector is used to connect the Communication Control Unit to the NX Unit on the right of the Communication Control Unit.
(F)	IP Address Switch 2 (x16, x1)	Used for setting an IP address for the built-in EtherNet/IP port (PORT2A and PORT2B). Use the rotary switches and specify a two-digit hexadecimal number.
(G)	IP Address Switch 1 (x16, x1)	Used for setting an IP address for the built-in EtherNet/IP port (PORT1). Use the rotary switches and specify a two-digit hexadecimal number.
(H)	SD Memory Card cover	A cover for the SD Memory Card DIP switch area. It opens in the horizontal direction.
(I)	Operation Status Indicators	Show the operation status of Communication Control Unit by multiple indicators.
(J)	End Cover	A cover to protect the Communication Control Unit and NX Unit. One End Cover is provided with the Communication Control Unit as a standard accessory.
(K)	DIN Track contact plate	This plate is used to contact the functional ground terminal with a DIN Track.
(L)	Unit hookup guides	These guides are used to mount NX Units or End Cover.
(M)	ID Information Indication	Shows the ID information of the Unit.
(N)	DIP Switch	Used for backups. Normally, turn OFF all of the pins.
(O)	Built-in EtherNet/IP Port (PORT2)	Connects the built-in EtherNet/IP with an Ethernet cable. PORT2 consists of two RJ45 connectors (PORT2A and PORT2B) and has a built-in Ethernet switch.
(P)	Built-in EtherNet/IP Port (PORT1)	Connects the built-in EtherNet/IP with an Ethernet cable.

Terminal Blocks

NX-TBC082

8-terminal type

Letter	Name	Function
(A)	Terminal number indications	The terminal numbers are given by column letters A and B, and row numbers 1 to 8. The combination of the "column" and "row" gives the terminal numbers from A1 to A8 and B1 to B8. The terminal number indicators are the same regardless of the number of terminals on the terminal block, as shown above.
(B)	Release hole	Insert a flat-blade screwdriver into these holes to connect or remove the wires.
(C)	Terminal hole	The wires are inserted into these holes.
(D)	Ground terminal mark	This mark indicates the ground terminals.

Terminal Blocks come in three types depending on the number of terminals that can be used. There are 8-terminal, 12-terminal, and 16-terminal Terminal Blocks.
Only the 8-terminal type terminal block is compatible with Communication Control Unit.
To prevent incorrect insertion, terminal blocks in any other types besides the 8-terminal type cannot be mounted.

Applicable Terminal Blocks for Each Model

Current capacity of power supply terminals and applicable terminal blocks for each model of Communication Control Unit are shown in the following table.

Unit model number	Current capacity of power supply terminal for the Unit		Terminal block			
	Unit power supply	I/O power supply	Terminal block model	Number of terminals	Ground terminal mark	Terminal current capacity
NX-CSG320	4 A		NX-TBC082	8	Provided	10 A

Indicators
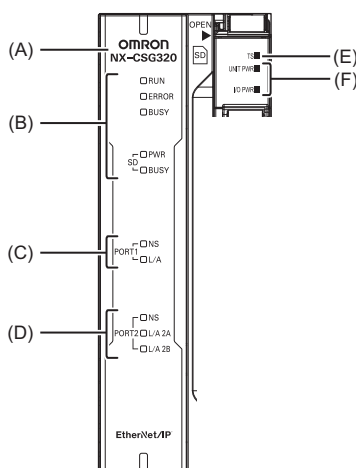

Letter	Name	Function
(A)	Model number display	Displays the model information of Communication Control Unit.
(B)	Communication Control Unit Status Indicators	The indicators show the current operating status of Communication Control Unit.
(C)	Built-in EtherNet/IP Status Indicators (PORT1)	The indicators show the communications status of Built-in EtherNet/IP Port (PORT1).
(D)	Built-in EtherNet/IP Status Indicators (PORT2)	The indicators show the communications status of Built-in EtherNet/IP Port (PORT2).
(E)	NX Bus Status Indicators	These indicators show the communications status with Communication Control Unit and NX Units.
(F)	Power Status Indicators	Show the power supply status of the Unit and I/O power supply.

Safety Control Units
Safety CPU Units NX-SL5500/SL5700
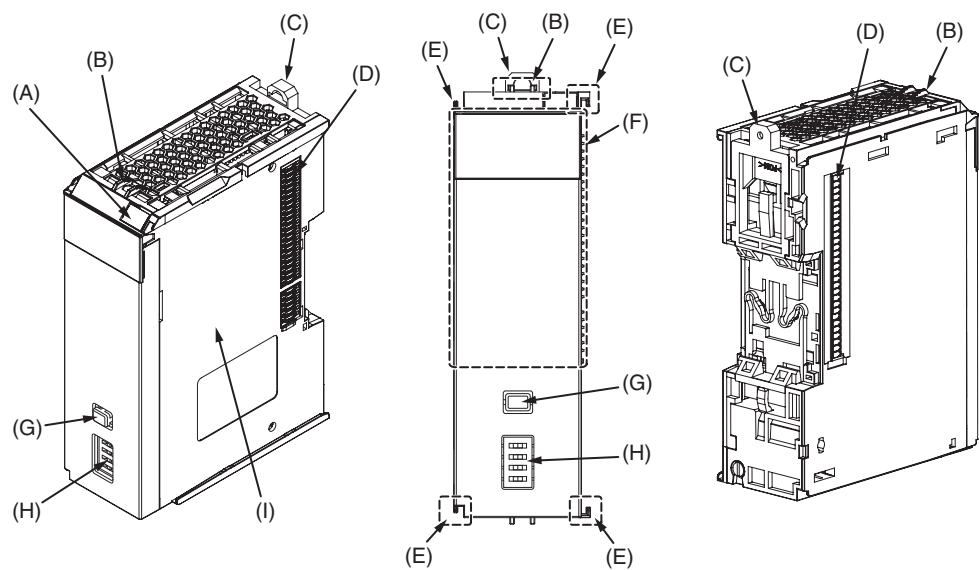

Letter	Name	Function
(A)	Marker attachment locations	The locations where markers are attached. The markers made by OMRON are installed for the factory setting. Commercially available markers can also be installed.
(B)	Protrusions for removing the Unit	The protrusions to hold when removing the Unit.
(C)	DIN Track mounting hook	This hook is used to mount the NX Unit to a DIN Track.
(D)	NX bus connector	This is the NX-series bus connector.
(E)	Unit hookup guides	These guides are used to connect two Units.
(F)	Indicators	The indicators show the current operating status and power supply status of the Safety CPU Unit.
(G)	Service switch	This switch is used for the start trigger of various functions.
(H)	DIP switch	This switch is used for the Safety Unit Restore and the safety data logging function.
(I)	Unit specifications	The specifications of the Safety CPU Unit are given.

Indicators
The Safety CPU Unit has indicators that show the current operating status and communications status.
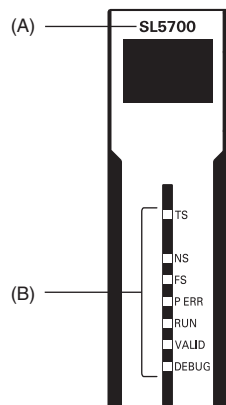

Letter	Name	Function
(A)	Model number display	Displays part of the model number of the Safety CPU Unit.
(B)	Indicators	Show the current operating status and communications status of the Safety CPU Unit.

Safety Input Units NX-SIH400/SID800
## Safety Output Units NX-SOH200/SOD400

Letter	Item	Specification
(A)	Marker attachment locations	The locations where markers are attached. The markers made by OMRON are installed for the factory setting. Commercially available markers can also be installed.
(B)	NX bus connector	This is the NX-series bus connector. Connect this connector to another Unit, such as the NX-series Safety CPU Unit or a Safety I/O Unit.
(C)	Unit hookup guides	These guides are used to connect two Units.
(D)	DIN Track mounting hooks	These hooks are used to mount the NX Unit to a DIN Track.
(E)	Protrusions for removing the Unit	The protrusions to hold when removing the Unit.
(F)	Indicators	The indicators show the current operating status of the NX Unit or signal I/O status. The number of indicators varies depending on the NX Unit.
(G)	Terminal block	The terminal block is used to connect to external devices. It connects the safety outputs. The number of terminals depends on the NX Unit.
(H)	Unit specifications	The specifications of the NX Unit are given here.

Terminal Blocks

8-terminal type   16-terminal type

Letter	Item	Specification
(A)	Terminal number indications	The terminal numbers are given by column letters A and B, and row numbers 1 to 8. The combination of the column and row gives the terminal numbers from A1 to A8 and B1 to B8. The terminal number indicators are the same regardless of the number of terminals on the terminal block, as shown above.
(B)	Release holes	Insert a flat-blade screwdriver into these holes to connect and remove the wires.
(C)	Terminal holes	The wires are inserted into these holes.

Applicable Terminal Blocks for Each Unit Model

Unit model number	Terminal Blocks				
	Model	No. of terminals	Terminal number indications	Ground terminal mark	Terminal current capacity
NX-SIH400	NX-TBA082	8	A/B	None	10 A
NX-SID800	NX-TBA162	16	A/B	None	10 A
NX-SOH200	NX-TBA082	8	A/B	None	10 A
NX-SOD400	NX-TBA082	8	A/B	None	10 A

Applicable Wires

Using Ferrules

If you use ferrules, attach the twisted wires to them.
Observe the application instructions for your ferrules for the wire stripping length when attaching ferrules.
Always use plated one-pin ferrules. Do not use unplated ferrules or two-pin ferrules.
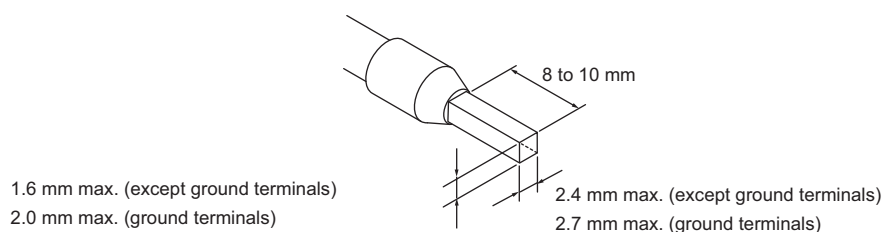

The applicable ferrules, wires, and crimping tool are given in the following table.

Terminal types	Manufacturer	Ferrule model number	Applicable wire (mm² (AWG))	Crimping tool
Terminals other than ground terminals	Phoenix Contact	AI0,34-8	0.34 (#22)	Phoenix Contact (The figure in parentheses is the applicable wire size.) CRIMPFOX 6 (0.25 to 6 mm², AWG24 to 10)
		AI0,5-8	0.5 (#20)	
		AI0,5-10		
		AI0,75-8	0.75 (#18)	
		AI0,75-10		
		AI1,0-8	1.0 (#18)	
		AI1,0-10		
		AI1,5-8	1.5 (#16)	
		AI1,5-10		
Ground terminals		AI2,5-10	2.0 *	
Terminals other than ground terminals	Weidmuller	H0.14/12	0.14 (#26)	Weidmuller (The figure in parentheses is the applicable wire size.) PZ6 Roto (0.14 to 6 mm², AWG 26 to 10)
		H0.25/12	0.25 (#24)	
		H0.34/12	0.34 (#22)	
		H0.5/14	0.5 (#20)	
		H0.5/16		
		H0.75/14	0.75 (#18)	
		H0.75/16		
		H1.0/14	1.0 (#18)	
		H1.0/16		
		H1.5/14	1.5 (#16)	
		H1.5/16		

* Some AWG 14 wires exceed 2.0 mm² and cannot be used in the screwless clamping terminal block.

When you use any ferrules other than those in the above table, crimp them to the twisted wires so that the following processed dimensions are achieved.

Finished Dimensions of Ferrules

8 to 10 mm

1.6 mm max. (except ground terminals)
2.0 mm max. (ground terminals)

2.4 mm max. (except ground terminals)
2.7 mm max. (ground terminals)

Using Twisted Wires/Solid Wires

If you use the twisted wires or the solid wires, use the following table to determine the correct wire specifications.

Terminals		Wire type				Wire size	Conductor length (stripping length)
		Twisted wires		Solid wire			
Classification	Current capacity	Plated	Unplated	Plated	Unplated		
All terminals except ground terminals	2 A max.	Possible	Possible	Possible	Possible	0.08 to 1.5 mm² AWG28 to 16	8 to 10 mm
	Greater than 2 A and 4 A or less		Not Possible	Possible *1	Not Possible		
	Greater than 4 A	Possible *1		Not Possible			
Ground terminals	---	Possible	Possible	Possible *2	Possible *2	2.0 mm²	9 to 10 mm

*1 Secure wires to the screwless clamping terminal block. Refer to the *Securing Wires* in the USER'S MANUAL (Cat. No. Z395) for how to secure wires.

*2 With the NX-TB□□□1 Terminal Block, use twisted wires to connect the ground terminal. Do not use a solid wire.
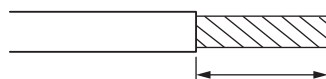

Conductor length (stripping length)

<Additional Information> If more than 2 A will flow on the wires, use plated wires or use ferrules.

Selecting the Network Devices

Recommended Ethernet Switches

We recommend products that have passed the ODVA's conformance tests for Managed Ethernet Switch Device Profile.
For more information, contact ODVA.
ODVA website: https://www.odva.org

Recommended Twisted-pair Cables and Connectors

Applicable EtherNet/IP communications cables and connectors vary depending on the used baud rate.
For 100Base-TX and 10Base-T, use an STP (shielded twisted-pair) cable of category 5 or higher.
You can use either a straight or cross cable.
Cabling materials used for EtherNet/IP communication cables are shown in the table below.
100Base-TX in the Product name column of the table below indicates that either 100Base-TX or 10Base-T can be used.

Product name			Manufacturer	Model
For 1000Base-T and 100Base-TX	Size and conductor pairs: AWG 24 × 4 pairs ✱	Cables	Hitachi Metals, Ltd.	NETSTAR-C5E SAB 0.5 × 4P CP
			Kuramo Electric Co., Ltd.	KETH-SB
			SWCC Showa Cable Systems Co., Ltd.	FAE-5004
		RJ45 Connectors	Panduit Corporation	MPS588-C
For 100Base-TX	Size and conductor pairs: AWG 22 × 2 pairs ✱	Cables	Kuramo Electric Co., Ltd.	KETH-PSB-OMR
			JMACS Japan Co., Ltd.	PNET/B
		RJ45 Assembly Connectors	OMRON	XS6G-T421-1

✱ We recommend that you use cables and connectors in above combinations.

Safety I/O Terminal GI-S Series
GI-SMD/SID

Safety I/O Terminals for CIP Safety™

- Support for CIP Safety on EtherNet/IP
- Standard-feature EtherNet/IP port
- Easy programming with Sysmac Studio

For the most recent information on models that have been certified for safety standards, refer to your local Omron website.

Features

- Memory cassette for quick replacement of terminal
- Removable terminal block for easy maintenance
- Push-In Plus (screwless clamping) terminal block

### Quick replacement of terminal

■**Memory cassette for quick replacement of terminal**

Remove the memory cassette from the old terminal and install it into the new one to inherit the settings. No software is required.

< Old terminal >   < New terminal >

Install the memory cassette removed from the old terminal
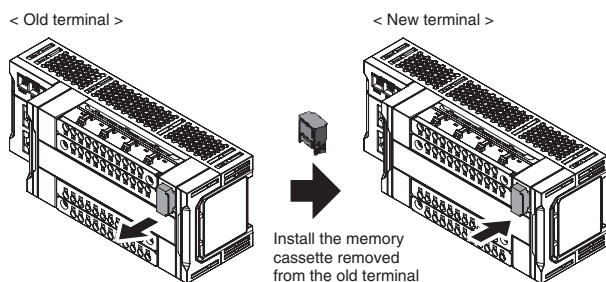

■**Removable terminal block**

Remove the wired terminal block from the old terminal and install it into the new one. No re-wiring is required.

< Old terminal >   < New terminal >

✽ Unscrew and remove the terminal block.

Specifications

Regulations and Standards
GI-S-series safety I/O terminals

Certification body	Standards
TÜV Rheinland	• EN ISO 13849-1 • IEC 61508 parts 1-7 • IEC/EN 62061 • IEC/EN 61131-2
UL	• NRAG (UL 61010-1, UL 61010-2-201 and UL 121201) • NRAG7 (CSA C22.2 No. 61010-1, CSA C22.2 No. 61010-2-201 and CSA C22.2 No. 213)

• The FSoE protocol was certified for applications in which OMRON FSoE devices are connected to each other.For compatibility with FSoE devices other than OMRON FSoE devices, the customer must validate FSoE communications.

By using GI-S-series safety I/O terminals, you can build a safety control system that meets the followings.
• Requirements for SIL 3 (Safety Integrity Level 3) in IEC 61508, IEC/EN 62061, (Functional Safety of Electrical/Electronic/Programmable Electronic Safety-related Systems)
• Requirements for PLe (Performance Level e) and for safety category 4 in EN ISO13849-1
Also, GI-S-series safety I/O terminals have been registered for conformity to RCM, EAC, and KC (Korean radio regulation).
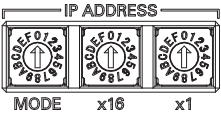

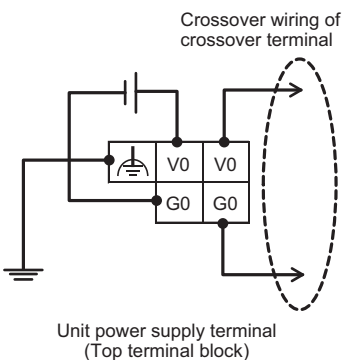

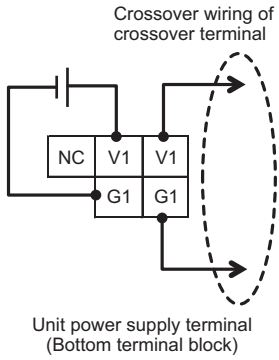

General Specifications

Item		Specification
Enclosure		Mounted in a panel (open type)
Operating environment	Ambient operating temperature	0 to 55°C
	Ambient operating humidity	10% to 95% (with no condensation or icing)
	Atmosphere	Must be free from corrosive gases
	Ambient storage temperature	−25 to 70°C (with no condensation or icing)
	Altitude	2,000 m max.
	Pollution degree	2
	Insulation class	CLASS III (SELV)
	Overvoltage category	II
	EMC immunity level	Zone B: IEC 61131-2
	Vibration resistance	Conforms to IEC 60068-2-6 5 to 8.4 Hz with amplitude of 3.5 mm 8.4 to 150 Hz, acceleration of 9.8 m/s^2 100 min. in each X, Y, and Z directions (10 sweeps of 10 min. each = 100 min. total)
	Shock resistance	Conforms to IEC 60068-2-27 147 m/s^2 3 times in each X, Y, and Z directions
	Insulation resistance	20 MΩ between isolated circuits (at 100 VDC)
	Dielectric strength	500 VAC between isolated circuits for 1 minute at a leakage current of 10 mA max.
Installation method		DIN Track mounting (IEC 60715 TH35-7.5/TH35-15)
Degree of protection		IP20

Individual Specifications

GI-SMD1624/GI-SID1224

Model	GI-SMD1624	GI-SID1224
Number of safety input points	12	
Number of safety output points	4	---
Number of test output points	12	
OMRON special safety input device *1	Connection unavailable

Model	GI-SMD1624	GI-SID1224
Inter-terminal connection diagram	**V0/G0 Unit power supply**	
	V1/G1 Output power supply	∗2
Installation direction and restriction	No restriction	
Protective function	Overvoltage protection, overcurrent protection	

∗1. OMRON special safety input devices are the following input devices:
  • Safety mat UMA/UM
  • Safety edge SGE
  • Single-beam safety sensor E3ZS
  • Non-contact door switch D40A/D40Z
∗2. GI-SID1224 has no output signal terminal and no output power supply is connected.
∗3. Projections are not included.
∗4. Inrush current when the supply power is turned ON from the static power-OFF state. Inrush current value may vary depending on conditions. For your selection of fuses, breakers, and external power supply units, take into account the conditions to be used to select those that have a margin in characteristics and capacity.
∗5. Current-carrying capacity allowed to continuously flow through the terminal. This current must not be exceeded in case crossover wiring is done for the unit power supply.

Built-in EtherNet/IP port specifications

This section describes the field bus specifications of the safety I/O terminal.

| Item		Specifications
		GI-SMD1624 / GI-SID1224
Communications protocol		TCP/IP, UDP/IP
Support services		Sysmac Studio connection, CIP message communication, DHCP (client)
Number of logical ports		2
Physical layer		100BASE-TX
Transmission specifications	Media access method	CSMA/CD
	Modulation	Baseband
	Transmission path	Star, daisy chain, mixed (star and daisy chain)
	Transmission rate	100M bit/s (100BASE-TX)
	Transmission media	Twisted-pair cable (shielded: STP): category 5/5e or higher
	Transmission distance	100m max. (distance between hub and node)
Number of daisy chain connections		8 units
CIP messaging service: Explicit message UCMM (non-connection type)		Maximum number of clients that can communicate simultaneously: 8/Logical ports
Implicit (I/O) connection	Exclusive Owner (EO) connection	1
EtherNet/IP conformance test		CT9 compliant
Ethernet interface		100BASE-TX Auto Negotiation Auto-MDI

GI-SMD/SID

Version Information

This section describes the combinations that can be used of the unit versions of the Safety CPU Unit and the Communication Control Unit, Machine Automation Controller, and the version of the Sysmac Studio.

Safety I/O terminal		Corresponding unit version/version			
Model	Unit version	Safety CPU Unit NX-SL5700 NX-SL5500	Communication Control Unit NX-CSG320	Machine Automation Controller NX102-□□□□	Sysmac Studio
GI-SMD1624	Ver. 1.0	Ver. 1.3	Ver. 1.01	Ver. 1.31	Ver. 1.24
GI-SID1224	Ver. 1.0	Ver. 1.3	Ver. 1.01	Ver. 1.31	Ver. 1.24

Component and Functions

This section describes the names and functions of the parts of the safety I/O terminal.
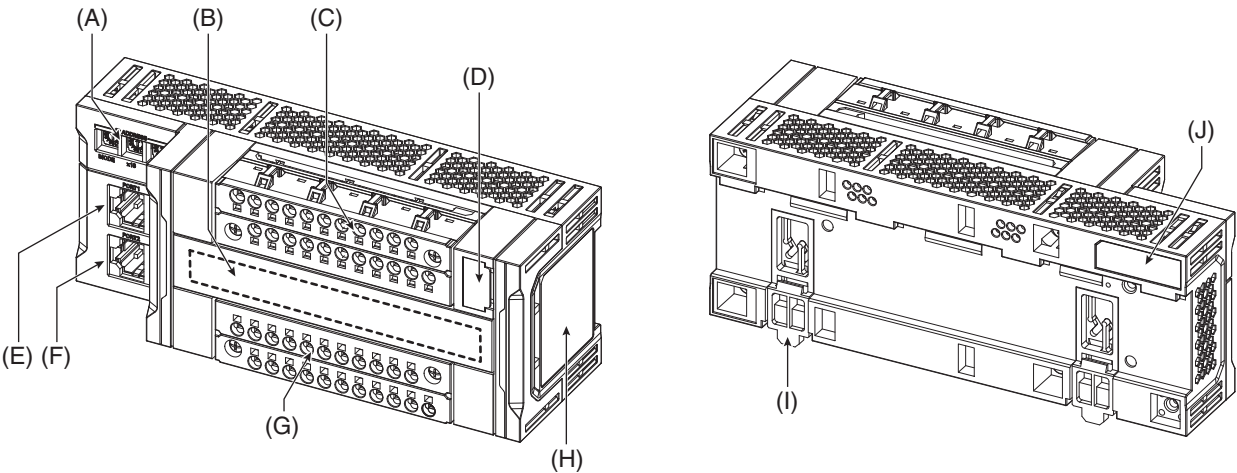

Symbol	Name	Description
A	Rotary switch	Used to set the mode switching and IP address of the built-in EtherNet/IP ports (PORT1/PORT2), in hexadecimal expression.
B	LED indicator	Shows the operation, signal, power supply and statuses of the safety I/O terminal itself by LED.
C	Top terminal block	Terminal block to connect unit power supply, grounding, and input devices.
D	Memory cassette slot	A memory cassette is set on delivery. The memory cassette allows a user to inherit the settings when replacing GI-S-series.
E	Built-in EtherNet/IP port (PORT1)	Connects the built-in EtherNet/IP with an Ethernet cable.
F	Built-in EtherNet/IP port (PORT2)	Connects the built-in EtherNet/IP with an Ethernet cable.
G	Bottom terminal block	Terminal block to connect output power supply and input/output devices. ✽
H	Unit specifications	Shows the product information, standards marking, and ID information (lot number/unit version) of the safety I/O terminal.
I	DIN Track mounting hooks	These hooks are used to mount the Unit to a DIN Track.
J	ID information indication	Shows the ID information (MAC address) of the safety I/O terminal.

✽ Connection of output device is for GI-SMD1624 only.

Wiring

## Terminal arrangement
Top terminal block

⏚	V0	V0	IN0	IN1	IN2	IN3	IN4	IN5	IN6	IN7	
	G0	G0	T0	T1	T2	T3	T4	T5	T6	T7	NC

Symbol	Terminal name	Description
⏚	Functional grounding	Functional grounding terminal to connect the grounding wire.
V0, G0	Unit power supply terminal	Terminal to connect the safety I/O terminal's power supply and to supply power to external devices. Power supply 24VDC is connected to V0 and 0VDC to G0, respectively. V0 and G0 terminals are internally connected.
IN0 - IN7	Input terminal	Terminal to connect a safety input device.
T0 - T7	Test output terminal	Terminal for test output.

Bottom terminal block
Arrangement differs for safety I/O terminal models.

a) GI-SMD1624
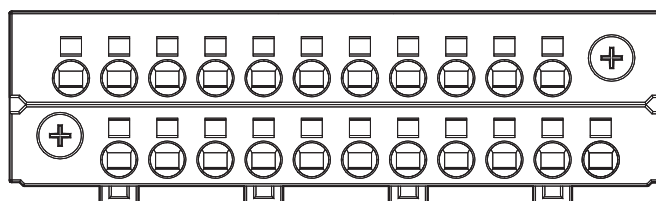

NC	V1	V1	G1	OUT0	OUT1	G1	IN8	IN9	IN10	IN11	
	G1	G1	G1	OUT2	OUT3	G1	T8	T9	T10	T11	NC

| Symbol	Terminal name	Description
V1, G1	Output power supply terminal	Terminal to supply power to internal output control circuit and external devices. V1 and G1 terminals are internally connected.
OUT0 - OUT3	Output terminal	Terminal to connect a safety output device.
IN8 - IN11	Input terminal	Terminal to connect a safety input device.
T8 - T11	Test output terminal	Terminal for test output.

b) GI-SID1224
The terminal block form is same as a).

| NC	V1	V1	G1	NC	NC	G1	IN8	IN9	IN10	IN11	
	G1	G1	G1	NC	NC	G1	T8	T9	T10	T11	NC

Symbol	Terminal name	Description
V1, G1	Output power supply terminal	V1 and G1 terminals are internally connected. GI-SID1224 is not connected to an output device and must not be wired.
NC	NC	Do not connect.
IN8 - IN11	Input terminal	Terminal to connect a safety input device.
T8 - T11	Test output terminal	Terminal for test output.

Safety Precautions

Be sure to read the *Common Precautions for Safety Warning* at the following URL: http://www.ia.omron.com/.
Be sure to read the following user's manual for other details required for correct use of the Safety I/O Terminals.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
