This series redefines safety at manufacturing sites

Manufacturers now need to manage globalization and flexible production. That's why we have developed our F3SG-SR/PG Series. This series offers a complete lineup of light curtains that comply with global safety standards and a wide range of functionality that covers all aspects from design through to maintenance. The F3SG-SR/PG Series helps manufacturers build safety systems.

Helps build safety systems for machines all over the world

This series conforms to worldwide safety standards.

PNP/NPN selection by changing the wiring allows you to easily bring and install the light curtain across the world.

The unique tightly sealed structure meets IP67G water and oil resistance and IP69K*.

Omron's unique compact design

The F3SG-PG Safety Multi-Light Beam has the same compact housing as the F3SG-SR Safety Light Curtain. This makes mechanical design more flexible.

* Compared with OMRON Robotics and Safety Technologies, Inc's PA46 Perimeter Access Guarding Device. (Based on Omron investigation in June 2018)

Easy line layout changes

Simply replace a light curtain using the same accessories because the F3SG-SR Series and F3SG-PG Series share the same housing. There is no need to select and install optional accessories for a new light curtain.

Example : In order to install the light curtain closer to the machine, the perimeter guarding model is replaced with the hand protection model.

Just replace the light curtain with the same protective height*

Flexible installation

Perfect fit

Protective heights are available in increments of 40 mm up to 1,000 mm*. The perfect protective height for any protected area ensures safety without the need for additional measures.

Problem

The light curtain that does not completely fit the protected area requires additional measures (e.g., adding a protection cover).

F3SG-SR*

The flexible height model requires no additional measures.

* F3SG-SR Finger and Hand Protection models only.

Protection without dead space

The F3SG-SR Series eliminates dead space that previously existed even when light curtains are series-connected or U-shape connected. Safer systems can be designed.

Problem

Dead space exists at the joint.

F3SG-SR*

Eliminates dead space and ensures safety.

* Except for F3SG-SR Finger Protection models.

Simple wiring for flexible design

The F3SG-PG-C Perimeter Guarding Passive Mirror requires wiring of only the emitter/receiver. The use of an optional mirror column allows wiring at one location for protection around perimeters of equipment. They reduce wiring duct design and wiring time.

Wiring only the emitter/receiver (F3SG-PG-C)

Wiring at one location for protection around perimeters of equipment (Other than F3SG-PG-C)

Two different synchronization methods

Choose from two different methods of synchronization between the emitter and receiver to suit your equipment.

Optical synchronization

No sync lines are required.
Connect emitter only to power supply.

Mutual interference prevention : Up to 2 sets

Wired synchronization

Mutual interference prevention : Up to 3 sets

Color indication of beam status for quick and easy beam adjustment

Reduce beam adjustment time.

Area Beam Indicator (ABI) for an at-a-glance check of beam status

PATENTED

The ON or OFF state of the light curtain and low light intensity can be checked.

The ABI also facilitates fine adjustment of beams for long-distance sensing.

Easy to see

Stable state

Green :
Safety outputs ON

Red :
Safety outputs OFF*

The beams in the area are blocked.

* The indicator of an unblocked area is OFF.

Note : Factory default setting.

The images of indicator illumination may vary somewhat from the actual products.

Laser Alignment Pointer

F39-PTS

F39-PTG

Assists with beam adjustment.

Easy-to-see laser beam shows the sensor orientation. It can be attached on the spatter protection cover.

A variety of optional accessories for easy installation and angle adjustment

Reduce installation time and easily adjust beams after installation without relying on the expertise of experienced engineers.

Easy beam adjustment after installation

Problem

It is difficult to adjust beams after the light curtain and protective components are installed.

F3SG-SR/PG

The rugged metal housing does not need protective components. Beams can be adjusted using brackets.

Adjustable Top / Bottom Bracket
F3SJ, F3SN Adapter
F39-LSGTB-SJ

This bracket used at the top and bottom of the light curtain provides horizontal adjustment of $\pm 22.5^\circ$.

Adjustable Side-Mount Bracket
(Intermediate Bracket)
F39-LSGA

This bracket provides horizontal adjustment of $\pm 15^\circ$ as well as vertical position adjustment.

Floor Mount Column
F39-ST

This column can be installed independently of equipment or fences, almost anywhere.

Setting without PC

Reduced wiring system for various equipment

Wiring work during line installation and maintenance can be greatly reduced.

Simple wiring around large equipment

Problem

The distance of wiring around large facilities to the control panel generally becomes long.

F3SG-SR/PG

The reduced wiring system reduces the number of cables and terminal blocks and wiring time.

Reduced wiring connector

Y-Joint Plug /
Socket Connector
F39-GCNY2

Note: Refer to the User's Manual (Cat. No. Z405) for more information on cable extension.

One cable connection to control panel

Options provide simple wiring for muting.

Problem

In order to maintain productivity, the light curtains are often used with muting sensors, which makes wiring in the control panel more complicated.

F3SG-SR/PG

Options to reduce wiring simplify wiring and installation of muting sensors.

Muting Sensor Arm Mounter F39-FMA

The muting sensor arm mounter facilitates installation of a muting sensor.

Muting Sensor Connection Box F39-GCN5

The connection box simplifies wiring required for muting, and only one cable is used to connect to the control panel.

Note : The E3Z Muting Sensor is sold separately.

Easy and secure connection

Robustness for operation in harsh environments

Specifications suitable for use in any environment contribute to stable operation.

Designed for reliable use in harsh environments
where light curtains are prone to malfunction

Cold storage warehouse

Safety measures cannot be implemented because there is no light curtain that can be used in cold environments.

Metal working process

Oil that gets inside the light curtain causes failure at locations where oil mist is present.

Food processing line

Cleaning solution that gets inside the light curtain during machine wash-down causes failure.

Use in harsh environments

The spattered or dusty optical surface of the light curtain causes a malfunction or an unplanned machine stop.

IEC 60529

JIS C 0920 Annex 1

Tightly sealed structure improved environmental resistance

The unique structure firmly presses the optical surface. Stable sealing performance resists penetration of liquid inside the light curtain, which improves environmental resistance.

Technology 2 to tightly seal the housing

High-power optical system provides stable detection

The maximum operating range of the F3SG-SR Safety Light Curtain is 20 m and of the F3SG-PG Safety Multi-Light Beam 70 m. The high-power beam is robust in harsh environments.

Metal housing increases ruggedness

Laser marked product information withstands harsh environments

Easy maintenance

Even inexperienced operators can easily check status and replace light curtains.

Easy error diagnosis with clear color indicators

The light curtain status can be checked at a glance.

Status indicator

Clear LED indicators with labels provide information about dirt detection for predictive maintenance and about LOCKOUT state for recommending replacement.

Colors and patterns indicate the status

Status indicator*	Color	Status
	Red/Illuminated	LOCKOUT state due to a recoverable error
	Red/Blinking	LOCKOUT state due to a replacement-recommended error
	Orange/Illuminated	Safety outputs are instantaneously turned OFF due to ambient light, vibration, or noise
	Orange/Blinking	The Intelligent Tap is in LOCKOUT state

* The status indicator is used for the 14-mm detection capability model.

Lamp

Output status can be checked at a glance.

F39-SGLP

Output information can be assigned to the lamp as well as ABL.

Status, such as light intensity drop, can be checked from a distance.

For information on other indicators, refer to the F3SG-SR/PG Datasheet (Cat. No. F117) *Indicator* or *Troubleshooting*.

Back up and restore settings with intelligent tap

Replacement and setting time during maintenance can be reduced to 1/10 or less*.

Plug & Work for quick replacement

Install the intelligent tap to automatically copy the settings of the replaced light curtain to a new one. Virtually anyone can easily replace light curtains and immediately restart the machine.

Preventive maintenance

The status of the light curtain is monitored, and the abnormal state is displayed. This helps minimize machine downtime.

Visualization of status

Various devices can be connected via IO-Link.*1

Low light intensity due to dirt on the light curtain can be displayed on the monitor, which is useful for preventive maintenance prior to erroneous detection.

Manually loaded machining : PSDI

PSDI*, provided as standard, reduces operator effort and increases productivity

There is no need for the operator to press a two-hand control switch, saving operating time and increasing operating efficiency.

Single break

The machine restarts when the light curtain is interrupted and reset once.

Example : Manual loading and automatic unloading press

Double break

The machine restarts when the interruption and reset are repeated twice.

Example : Manual loading and manual unloading press

* PSDI : Presence Sensing Device Initiation

Read the *User's Manual* (Cat. No. Z405) before using.

Note: Comply with laws and regulations in the countries where the machine operates.

Dangerous restart prevention : Pre-Reset

The Pre-Reset function prevents possible accidents

This function prevents the restart of equipment while an unseen worker remains near the robot, ensuring operators' safety.

- 1 Press the pre-reset switch inside the hazardous zone.
- 2 Get out of the hazardous zone.
- 3 Press the reset switch outside the hazardous zone to restart the light curtain.

The equipment cannot be restarted until the pre-reset conditions are met and the light curtain is reset.

Change of detection capability: Reduced Resolution

Reduced Resolution changes the detection capability according to the specified number of interrupted beams

Even when objects (with a size of 1 to 3 beams) are present discontinuously, this function ignores them and keeps the safety outputs ON. This allows objects to move within the detection area or workers to interrupt some beams, helping maintain productivity.

Example : Arm and body protection

Safety output is kept ON even if worker's finger and an object interrupt 2 beams because they are allowed to enter.

When worker's arm or body, which interrupts 3 beams is detected, safety output is turned OFF.

Note : Ensure that the desired safety distance is maintained.
