Industrial PC Platform
NY-series
IPC Programmable Multi Axis Controller
Industrial Box PC

Hardware User's Manual

NY512-A6001XX21391X
Thank you for purchasing the IPC Programmable Multi Axis Controller. This manual contains information that is necessary to use the IPC Programmable Multi Axis Controller (hereafter also named as Box PC). Please read this manual and make sure you understand the functionality and performance of the Box PC before attempting to use it. Keep this manual in a safe place where it will be available for reference during operation.

**Intended Audience**

This manual is intended for the following personnel, who must also have knowledge of electrical systems (an electrical engineer or the equivalent).

- Personnel in charge of introducing Factory Automation systems.
- Personnel in charge of designing Factory Automation systems.
- Personnel in charge of installing and maintaining Factory Automation systems.
- Personnel in charge of managing Factory Automation systems and facilities.

**Applicable Products**

This manual covers following IPC Programmable Multi Axis Controller product:

- NY512-A6001XX21391X

**Additional Information**

Refer to 1-5 *Product Configuration* on page 1-6 for configuration details.

Index
This section provides information about this manual.

### Page Structure

The following page structure is used in this manual.

#### 5-1 Unpack

This section provides details on how to unpack the Industrial Panel PC.

##### 5-1-1 Unpack Procedure

1. Check the package for damage.
   - If there is any visible damage:
     - Take photos of the package and save them.
     - Inform your supplier immediately.
   - Ensure not to damage the contents.
2. Ensure that all items are present.

**Additional Information**

Refer to 5-1-2 Items Supplied with the Product for the items supplied.

---

**Note:** This illustration is provided as a sample. It will not literally appear in this manual.

Special Information

Special information in this manual is classified as follows:

- **Precautions for Safe Use**
  Precautions on what to do and what not to do to ensure safe usage of the product.

- **Precautions for Correct Use**
  Precautions on what to do and what not to do to ensure proper operation and performance.

- **Additional Information**
  Additional information to read as required. This information is provided to increase understanding or make operation easier.

- **Version Information**
  Information on differences in specifications and functionality between different versions.
Warranties

- **Exclusive Warranty**
  Omron’s exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

- **Limitations**
  OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

  Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

- **Buyer Remedy**
  Omron’s sole obligation hereunder shall be, at Omron’s election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron’s analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

  See http://www.omron.com/global/ or contact your Omron representative for published information.
Limitation on Liability; Etc

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Application Considerations

Suitability of Use

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer’s application or use of the Product. At Buyer’s request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer’s application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products

• Omron Companies shall not be responsible for the user’s programming of a programmable Product, or any consequence thereof.
• Omron Companies shall not be responsible for the operation of the user accessible operating system (e.g. Windows, Linux), or any consequence thereof.
Disclaimers

Performance Data
Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron’s test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron’s Warranty and Limitations of Liability.

Change in Specifications
Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron’s representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions
Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
Safety Precautions

Definition of Precautionary Information

The following notation is used in this manual to provide precautions required to ensure safe usage of the IPC Programmable Multi Axis Controller. The safety precautions that are provided are extremely important to safety.

Always read and heed the information provided in all safety precautions.

The following notation is used.

<table>
<thead>
<tr>
<th>SYMBOL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="168x575" alt="WARNING" /></td>
<td>Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Additionally, there may be severe property damage.</td>
</tr>
<tr>
<td><img src="247x576" alt="Caution" /></td>
<td>Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury, or property damage.</td>
</tr>
</tbody>
</table>

Symbols

- The circle and slash symbol indicates operations that you must not do. The specific operation is shown in the circle and explained in text. This example indicates prohibiting disassembly.
- The triangle symbol indicates precautions (including warnings). The specific operation is shown in the triangle and explained in text. This example indicates a precaution for electric shock.
- The triangle symbol indicates precautions (including warnings). The specific operation is shown in the triangle and explained in text. This example indicates a general precaution.
- The filled circle symbol indicates operations that you must do. The specific operation is shown in the circle and explained in text. This example shows a general precaution for something that you must do.
Warnings

**WARNING**

**Disassembly and Dropping**

Do not attempt to disassemble, repair, or modify the product in any way. Doing so may result in malfunction or fire. In particular, high-voltage parts are present in the Controller while power is supplied or immediately after power is turned OFF. Touching any of these parts may result in electric shock. There are also sharp internal parts that may cause injury.

**Installation**

Always connect to a ground of 100 Ω or less when installing the product.

Ensure that installation and post-installation checks of the product are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

**Fail-safe Measures**

Provide safety measures in external circuits to ensure safety in the system if an abnormality occurs due to malfunction of the product or due to other external factors affecting operation. Not doing so may result in serious accidents due to incorrect operation.

Emergency stop circuits, interlock circuit, limit circuits, and similar safety measures must be provided in external control circuits.

The product will turn OFF all outputs from Output Units in the following cases. The slaves will operate according to the settings in the slaves.

- If an error occurs in the power supply
- If a controller error occurs
- While the product is in Standby until EtherCAT communication is started after the power is turned ON

External safety measures must be provided to ensure safe operation of the system in such cases.

If external power supplies for slaves or other devices are overloaded or short-circuited, the voltage will drop, outputs will turn OFF, and the system may be unable to read inputs. Provide external safety measures in controls with monitoring of external power supply voltage as required so that the system operates safely in such a case.

Unintended behavior may occur when an error occurs in internal memory of the product. As a countermeasure for such problems, external safety measures must be provided to ensure safe operation of the system.
Actual Operation

Check the user program, data, and parameter settings for proper execution before you use them for actual operation.

Security setting adjustments should only be performed by the engineer in charge that possesses a thorough understanding of the security settings. Selecting non-recommended security settings can put your system at risk.

Changing BIOS information is only allowed for the engineer in charge that possesses a thorough understanding of the BIOS settings because it can change the behavior of the product.

Transferring

Always confirm the safety status at the destination before you transfer a user program, configuration data, or setup data from POWER PMAC IDE. The devices or machines may perform unexpected operations regardless of the operating mode of the Controller.

Test Run

Before you start a Test Run, make sure that the operation parameters are set correctly.
Cautions

The product has an internal non-isolated DC power supply. Circuit ground (0 VDC) and frame ground are connected together. When connecting a non-isolated device or a non-isolated interface to the product, take appropriate actions to avoid communication failures or damage to the mentioned ports.

Never ground the 24 VDC side of the power supply. This may cause a short circuit.
Precautions for Safe Use

Disassembly, Dropping, Mounting, Installation and Storage

- Do not drop the product or subject it to abnormal vibration or shock. Doing so may result in product malfunction or burning.
- When unpacking, check carefully for any external scratches or other damages. Also, shake the product gently and check for any abnormal sound.
- Always use the devices specified in the relevant manual.
- The product must be installed in a control panel.
- Always install equipment that is included in the product specifications. Not doing so may result in failure or malfunction.
- If the storage period exceeds 6 months, check the performance of the Fan Unit before production starts.
- Install the product in the correct orientation and temperature according to the specifications in the manual to prevent overheating. Not doing so may result in malfunction.
- When connecting peripheral devices to the product, ensure sufficient countermeasures against noise and static electricity during installation of the peripheral devices.

Wiring

- Follow the instructions in the manual to correctly perform connector wiring and insertion. Double-check all wiring and connector insertion before turning ON the power supply.
- Always ensure connectors, cables, PCIe Cards and Storage devices are completely locked in place to prevent accidental disconnection.
- Before you connect a computer to the product, disconnect the power supply plug of the computer from the AC outlet. Also, if the computer has an FG terminal, make the connections so that the FG terminal has the same electrical potential as the product. A difference in electrical potential between the computer and the product may cause failure or malfunction.
- Do not bend or pull the cables beyond normal limit. Do not place heavy objects on top of the cables or other wiring lines. Doing so may break the cables.
- Always use power supply wires with sufficient wire diameters to prevent voltage drop and burning. Make sure that the current capacity of the wire is sufficient. Otherwise, excessive heat may be generated. When cross-wiring terminals, the total current for all the terminals will flow in the wire. When wiring cross-overs, make sure that the current capacity of each of the wires is not exceeded.
- Be sure that all mounting bracket screws and cable connector screws are tightened to the torque specified in the relevant manuals. The loose screws may result in fire or malfunction.
- Use crimp terminals for wiring.
- For an NY Monitor Link connection, always follow the cable type and connection method specifications in the manual. Otherwise, communications may be faulty.

Power Supply Design and Turning ON/OFF the Power Supply

- Always use a power supply that provides power within the rated range.
- Do not perform a dielectric strength test.
• Always use the recommended uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption. Back up the system files in the planned way to prevent data loss and other system file integrity issues caused by incorrect operation.
• Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
• Power ON after the DVI cable is connected between the product and an external monitor.
• Always check the power supply and power connections before applying power. Incorrect power connections can damage the product or cause burning.
• Always turn OFF the power supply to system before you attempt any of the following.
  • Inserting or removing PCIe Cards
  • Connecting cables
  • Connecting or disconnecting the connectors
  • Wiring the system
  • Replacing or removing the HDD/SSD
  • Replacing the Battery
  • Replacing the Fan Unit
• Do not turn off the power supply or remove the USB memory device while the Controller is accessing the USB memory device. Data may become corrupted, and the Controller will not operate correctly if it uses corrupted data.
• Always turn OFF the power supply before you attempt any of the following. Connecting cables or wiring the system Connecting or disconnecting the connectors.
• Do not disconnect the cable or turn OFF the power supply to the Controller when downloading data or programs from Support Software. Doing so interrupts the data transfer, and a malfunction may occur.

Actual Operation

• Choose a OS password that is not obvious to prevent unauthorized access.
• Remember the OS user name and password. The product is inaccessible without it.
• Before operating the system, please make sure the appropriate software is installed and configured. Doing so may prevent unexpected operation.
• Install all updates and ensure the browser stays up-to-date.
• Install all updates and ensure the firewall stays up-to-date.
• Make sure that your OS environment is protected against malicious software and viruses.
• Install all updates and ensure virus definitions stay up-to-date.
• Do not remove the fan cover while the power is ON. Contact with a rotating fan may result in injury.
• Virtual memory settings can affect the performance of the system. Disable the paging file after installation of applications or updates.
• Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.
• The task execution times in the physical Controller depends on load of operating system applications. Before starting actual operation, you must test performance under all foreseeable conditions on the actual system.

Operation

• Do not carry out the following operations when accessing a USB device or an SD Memory Card.
  • Turn OFF the power supply of the product.
• Press the Power Button of the product.
• Do not attempt to remove or touch the fan unit while the product is powered ON or immediately after the power supply is turned OFF. If you attempt to replace the fan unit then, there is a risk of personal injury due to hot or rotating parts.
• Press the power button for several seconds to force the product shutdown. Always back up files in the planned way to prevent data loss or system file corruption.
• Do not attempt to remove or touch the fan unit while the product is powered ON or immediately after the power supply is turned OFF. If you attempt to replace the fan unit then, there is a risk of personal injury due to hot or rotating parts.
• Press the power button for several seconds to force the product shutdown. Always back up files in the planned way to prevent data loss or system file corruption.

General Communications

• Separate the machine network segment from the office network to avoid communication failures.

Battery Replacement

• Dispose of any Battery that has been dropped on the floor or otherwise subjected to excessive shock. Batteries that have been subjected to shock may leak if they are used.
• UL standards require that only an experienced engineer replace the Battery. Make sure that an experienced engineer is in charge of Battery replacement.
• The Battery may leak, rupture, heat, or ignite. Never short-circuit, charge, disassemble, heat, or incinerate the Battery or subject it to strong shock.

EtherCAT Communications

• Make sure that the communications distance, number of nodes connected, and method of connection for EtherCAT are within specifications. Do not connect EtherCAT communications to a standard in-house LAN, or other networks. An overload may cause the network to fail or malfunction.
• If noise occurs or an EtherCAT slave is disconnected from the network, any current communications frames may be lost. If frames are lost, slave I/O data is not communicated, and unintended operation may occur. The slave outputs will behave according to the slave specifications.
• EtherCAT communications are not always established immediately after the power supply is turned ON. Use the ECAT Network General Configuration Elements in the user program to confirm that communications are established before attempting control operations.
• When an EtherCAT slave is disconnected or disabled, communications will stop and control of the outputs will be lost not only for the disconnected slave, but for all slaves connected after it. Confirm that the system will not be adversely affected before you disconnect or disable a slave.
• You cannot use standard Ethernet hubs or repeater hubs with EtherCAT communications. If you use one of these, a major fault level error or other error may occur.
• If you need to disconnect the cable from an EtherCAT slave during operation, change to Init Status the EtherCAT slave and all of the EtherCAT slaves that are connected after it.
• For EtherCAT and EtherNet, use the connection methods and cables that are specified in this man-
ual. Otherwise, communications may be faulty.
• It takes up to approximately 30 to 40 s to start EtherCAT communication after the power is turned
ON. The outputs during this time behave according to the slave or Output Unit specifications. Imple-
ment fail-safe circuits so that external devices do not operate incorrectly.

Motion Control

• The motor is stopped if communications are interrupted between the Power PMAC IDE and the
product during a Test Run. Connect the communications cable between the computer and product
securely and confirm that the system will not be adversely affected before you perform a Test Run.
• Confirm the axis number carefully before you perform a Test Run.

Product Replacement

• Make sure that the required data, including the user program, configurations, settings and variables
is transferred to a product that was replaced and to externally connected devices before restarting
operation.

Cleaning, Maintenance and Disposal

• Do not use corrosive substances to clean the product. Doing so may result in the failure or malfun-
tion.
• Dispose of the product and batteries according to local ordinances as they apply.

• The following information must be displayed for all products that contain primary lithium batteries
with a perchlorate content of 6 ppb or higher when shipped to or transported through the State of
California, USA.
  Perchlorate Material - special handling may apply.
• The product contains a lithium battery with a perchlorate content of 6ppb or higher. When exporting
an end product containing the product to or shipping through California, USA, label all packing and
shipping containers appropriately.
Precautions for Correct Use

Storage, Installation and Mounting

• Do not operate or store the product in the following locations. Operation may stop or malfunctions may occur.
  • Locations subject to direct sunlight
  • Locations subject to temperatures or humidity outside the range specified in the specifications
  • Locations subject to condensation as the result of severe changes in temperature
  • Locations subject to corrosive or flammable gases
  • Locations subject to dust (especially iron dust) or salts
  • Locations subject to exposure to water, oil or chemicals
  • Locations subject to shock or vibration
  • Locations outdoors subject to direct wind and rain
  • Locations subject to strong ultraviolet light
• Always install the product with sufficient surrounding space to allow for adequate heat dissipation and cooling effect.
• Take appropriate and sufficient countermeasures when installing the product in the following locations
  • Locations subject to strong, high-frequency noise
  • Locations subject to static electricity or other forms of noise
  • Locations subject to strong electromagnetic fields
  • Locations subject to possible exposure to radioactivity
  • Locations close to power lines
• Always touch a grounded piece of metal to discharge static electricity from your body before starting an installation or maintenance procedure.
• Insert USB devices and PCIe devices correctly to avoid the burning, failure or malfunction.
• Execute a backup of the product before PCIe addition or replacement. Be sure that the PCIe device works correctly before you use them for actual operation. PCIe devices and their related software may cause an OS boot failure or crash.
• Ensure the selected operating system supports ACPI to enable operating system shutdown using the power button.
• Download the enhanced Video Driver from the OMRON Download Center and install it on the Industrial PC.

Wiring

• Always ensure the rated supply voltage is connected to the product.
• Do not allow wire clippings, shavings, or other foreign material to enter the product. Otherwise, burning, failure, or malfunction may occur. Cover the product or take other suitable countermeasures, especially during wiring work.
• Do not use cables exceeding the maximum specified length. Doing so may cause malfunction.
• Do not connect an AC power supply to the DC power connector.
• Observe the following precautions to prevent broken wires.
  • When you remove the sheath, be careful not to damage the conductor.
  • Connect the conductor without twisting the wires.
• Do not weld the conductors. Doing so may cause the wires to break with vibration.

## Actual Operation and Operation

- After an OS update or a peripheral device driver update for the product is executed, the product behavior might be different. Confirm that operation is correct before you start actual operation.
- Always create a Windows System Repair Disk using Windows Backup and Restore to recover the HDD/SSD configuration if necessary.
- Ensure the fan is operational to provide adequate cooling while the power is turned ON.
- HDD and SSD storage devices, SD Memory Cards, power buttons, fan units and batteries have finite lives and if those are exceeded, the product may fail or malfunction.
- Always monitor the fan status. If a fan is used beyond its service life, the Low Revolution Speed warning message is displayed and the product overheating may occur.
- Always monitor the battery warning message. When a battery has low voltage, the system time will be lost.
- If the product experiences a sudden loss of power or disconnecting the cable while saving a setting or transfer of data is underway, the changes may not be stored and unexpected behavior may occur.
- Ensure that available software checks are performed by personnel in charge who possess a thorough understanding of the software.
- Do not disconnect the communications cable while the system is running. Doing so may result in a failure or malfunction of the system.
- Do not reset or power OFF the product while the password is being changed.
- If you fail to save the password there is a possibility that the project will not work.

## Battery Replacement

- Turn ON the power after replacing the battery for a product that has been unused for an extended period of time. Leaving the product unused without turning ON the power even once after the battery is replaced may result in a shorter battery life.
- Make sure to use a battery of the correct type, install the battery properly.
- Apply power for at least five minutes before changing the battery. Mount a new battery within five minutes after turning OFF the power supply. If power is not supplied for at least five minutes, the clock data may be lost. Check the clock data after changing the battery.

## SD Memory Cards

- Insert an SD Memory Card completely and ensure it is in place.

## USB Flash Drives

- Always use USB memory devices that comply with the USB standards.

## Motion Control

- Do not download motion control settings during a Test Run.
EtherCAT Communications

- Set the Servo Drives to stop operation if an error occurs in EtherCAT communications between the Controller and a Servo Drive.
- Always use the specified EtherCAT slave cables. If you use any other cable, the EtherCAT master or the EtherCAT slaves may detect an error and one of the following may occur.
  - Continuous refreshing of process data communications will not be possible.
  - Continuous refreshing of process data communications will not end during the set cycle.
Conformance to EU Directives

The IPC Programmable Multi Axis Controller complies with EU Directives. To ensure that the machine or device in which the IPC Programmable Multi Axis Controller is used complies with EU Directives, the following precautions must be observed:

• The IPC Programmable Multi Axis Controller must be installed within a control panel.
• The IPC Programmable Multi Axis Controller that complies with EU Directives also conforms to the Common Emission Standard. Radiated emission characteristics (10-m regulations) may vary depending on the configuration of the control panel used, other devices connected to the control panel, wiring, and other conditions. You must therefore confirm that the overall machine or equipment in which the IPC Programmable Multi Axis Controller is used complies with EU Directives.
• This is a Class A product (for industrial environments). In a residential environment, it may cause radio interference. If radio interference occurs, the user may be required to take appropriate measures.

Applicable Directive

EMC Directive

EMC Directive

OMRON devices that comply with EU Directives also conform to the related EMC standards so that they can be more easily built into other devices or the overall machine. The actual products have been checked for conformity to EMC standards.

Applicable EMC (Electromagnetic Compatibility) standards are as follows:

• EMS (Electromagnetic Susceptibility): EN 61131-2
• EMI (Electromagnetic Interference): EN 61131-2 (Radiated emission: 10-m regulations)

Whether the products conform to the standards in the system used by the customer, however, must be checked by the customer. EMC-related performance of the OMRON devices that comply with EU Directives will vary depending on the configuration, wiring, and other conditions of the equipment or control panel on which the OMRON devices are installed. The customer must, therefore, perform the final check to confirm that devices and the overall machine conform to EMC standards.
Conformance to KC Standards

When you use this product in South Korea, observe the following precautions.

<table>
<thead>
<tr>
<th>사용 자 안내 문</th>
</tr>
</thead>
<tbody>
<tr>
<td>이 기기는 업무용 환경에서 사용할 목적으로 적합성평가를 받은 기기로서 가정용 환경에서 사용하는 경우 전파간섭의 우려가 있습니다.</td>
</tr>
</tbody>
</table>

This product meets the electromagnetic compatibility requirements for business use. There is a risk of radio interference when this product is used in home.

Conformance to UL and CSA Standards

Some Industrial PC Platform products comply with UL and CSA standards. If you use a product that complies with UL or CSA standards and must apply those standards to your machinery or devices, refer to this manual. This manual provides the application conditions for complying with the standards. If the product is used in a manner not specified in the Instruction Sheet or in the product manuals then the protection provided by the equipment may be impaired.

Software Licenses and Copyrights

This product incorporates certain third party software. The license and copyright information associated with this software is available at http://www.fa.omron.co.jp/nj_info_e/.

   1-6-1 Industrial Monitor .................................................... 1-7
   1-6-2 Industrial Box PC ..................................................... 1-8
1-1 Intended Use

The IPC Programmable Multi Axis Controller (also indicated as Box PC) is an industrial-grade PC intended for use within factory automation environments. This Box PC simultaneously uses the standard Windows operating system and Linux running the Programmable Multi Axis Controller kernel to serve as a powerful PC based motion control platform. The Programmable Multi Axis Controller kernel offers all of the intelligence and capabilities of the IPC Programmable Multi Axis Controller. With its built-in motion programs, software PLCs and basic I/O support, the Box PC offers complete machine logic control over EtherCAT.

The IPC Programmable Multi Axis Controller has a compact design that offers flexibility, expandability and easy maintenance for applications in factory automation environments.
The IPC Programmable Multi Axis Controller provides the following hardware features:

- **Compact design with two mounting orientation options**
  The Box PC has a compact design to minimize panel space while allowing for two mounting orientations.

- **Powerful CPU**
  A powerful CPU provides high performance for various applications.

- **Parallel Execution of Tasks with a Multi-core Processor**
  With a multi-core processor, the IPC Programmable Multi Axis Controller can execute the task and system services in parallel. This enables high-speed control of even large-scale devices.

- **Easy access to storage devices and the PCI Express Card**
  Adding or changing storage devices (HDD, SSD) and the PCI Express Card is fast and simple.

- **DVI visual interface**
  The video interface for the Box PC is provided with a DVI connector for connection to a monitor.

- **3 Ethernet ports 1Gb/s**
  Three ports support EtherCAT, EtherNet/IP, and Ethernet (for Windows) for interfacing with multiple network types.

- **EtherCAT Control Network Support**
  The IPC Programmable Multi Axis Controller provides an EtherCAT master port for EtherCAT communications. EtherCAT is an advanced industrial network system that achieves faster, more-efficient communications. It is based on Ethernet. Each node achieves a short fixed communications cycle time by transmitting Ethernet frames at high speed. The standard-feature EtherCAT control network allows you to connect all of the devices required for machine control (e.g., I/O systems, Servo Drives, Inverters, and machine vision) to the same network.

- **Support for EtherCAT Slave Terminals**
  You can use EtherCAT Slave Terminals to save space. You can also flexibly build systems with the wide variety of NX Units.

- **Achieving a Safety Subsystem on EtherCAT**
  You can use NX-series Safety Control Units to integrate safety controls in a sequence and motion control system as a subsystem on EtherCAT.

- **Built-in I/O**
  Built-in I/O for UPS status and Box PC shutdown control are provided.

- **4 USB ports**
  2 USB2.0 ports and 2 USB3.0 ports are provided for connection to external USB devices such as keyboards, memory sticks, or other peripheral hardware.

- **Built-in SD Memory Card slot**
  An SD Memory Card slot is provided for removable memory.
1-3 Software Features

The IPC Programmable Multi Axis Controller provides the following software features:

• Fast Multi-Axis Control
  The Programmable Multi-Axis Controller is developed by Delta Tau Data Systems, Inc., a manufacturer specializing in motion controllers. It allows for multi-axis control of up to 64 axes per unit (when CK3E-1500 is used), and the fast control of 250 μs/8-axis and 500 μs/64-axis.

• CNC Function
  The Controller has CNC functionality and supports G-code. This allows for high precision machining on curved surfaces and lines.

• Constructing Systems with Greater Flexibility
  Programs can be written in G-code, C language, or PMAC script for the Controller. Such function design flexibility allows you to create functions that are optimized for your equipment. Various EtherCAT-compatible products such as vision sensors and I/O as well as motion controls can be connected, allowing you to construct custom systems for your equipment.

1-6 Industrial PC Platform Overview

The Industrial PC Platform is an integrated range of products designed for use in a variety of industrial applications that will benefit from advanced PC technology. The range is scalable, robust and reliable, and is suitable for use with both standard operating system software and proprietary programs for machine control and automation.

In line with OMRON’s established quality standards, each element in the Industrial PC Platform, ranging from the standalone Industrial Box PC to the touchscreen Industrial Monitor, is engineered with long-life components and built to the most advanced design standards.

The following sections introduce Industrial PC Platform products.

1-6-1 Industrial Monitor

The Industrial Monitor is of key importance at the interface between operator and system. The Industrial Monitor is efficient, effective and highly visible with an attractive design.

Using smart algorithms, the touch controller determines the exact location of each touch for precise control as well as detecting abnormal or illegal actions to protect misuse or false touches.
1-6-2 Industrial Box PC

The Industrial Box PC is designed to meet the specific needs of the industrial environment. Design simplification and future-proof architecture minimize the risk of failure. In addition, new PC features can be seamlessly incorporated, without the need for wholesale redesign.
# Hardware

</table>
The IPC Programmable Multi Axis Controller supports the following system configuration:

- **Real-time Operating System**
- **NY-series IPC Machine Controller**
- **Ethernet**
- **Modbus-TCP**
- **PLC**
- **HMI**
- **Programmable Multi Axis Controller kernel (Controller)**
- **Windows**
- **SD Memory Card**
- **PCIe Card**
- **HDD / SSD**
- **RS-232C**
- **DVI**
- **USB**
- **Port 1**
- **Port 2**
- **Port 3**
- **EtherCAT**
- **Servo Drives and Inverters**
- **Machine vision**
- **Servo Drives and Inverters**
- **I/O controls**

The Windows operating system has all interfaces an Industrial PC requires:

- 1 Ethernet port to connect with regular Ethernet networks and to be able to connect with databases, MES- and ERP systems and other IIoT applications.
- 4 USB ports to connect peripheral devices.
- 1 DVI port to connect a monitor
- 1 RS-232C port to connect (legacy) peripheral devices and factory automation devices
- 2 slots for HDD and/or SSD storage devices
- 1 SD Memory Card slot for removable storage
- 1 PCIe Card Slot to add support for other (industrial) networks or peripheral ports

The Programmable Multi Axis Controller kernel has 2 Ethernet ports assigned.

- 1 EtherCAT port for (real-time) communication with EtherCAT Slaves, like servo drives and I/O devices.

  By using the EtherCAT master communications port on the Programmable Multi-Axis Controller, EtherCAT slaves such as servo drives, frequency inverters, machine vision systems, digital and analog I/O, and other general-purpose slaves can be connected.

- 1 Modbus-TCP port for communication with other Modus-TCP devices.

  The Ethernet communications port on the Programmable Multi-Axis Controller supports the Modbus-TCP protocol. It can be connected to devices such as a PLC or a programmable terminal that supports the Modbus-TCP protocol.
2-2  Component Names and Functions

This section shows views of the IPC Programmable Multi Axis Controller with information about all items.

2-2-1  Front and Top of the Industrial Box PC

This section shows the component names and functions for the front and top of the Box PC.

<td>Lit</td>
<td>• Thermal shutdown</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Watchdog Error</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Power Supply undervoltage error</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Power Supply overvoltage error</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Power supply defective</td>
</tr>
</tbody>
</table>

#### Additional Information
- Refer to 7-2 Corrective Maintenance on page 7-8 for actions to solve errors.
- For a Box PC with a Windows operating system the status of this LED can be defined by users using the Industrial PC System API. Refer to NY-series Industrial Box PC User’s Manual (Cat. No. W553) for Industrial PC System API details.

### 2-3-3 HDD LED Indicator

The Hard Disk Drive LED (HDD) indicates activity of the HDD or SSD.

<table>
<thead>
<tr>
<th>Color</th>
<th>Status</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yellow</td>
<td>Flickering</td>
<td>The HDD or SSD is active.</td>
</tr>
</tbody>
</table>

### 2-3-4 RUN LED Indicator

The RUN LED has no functionality and will not be lit.

#### Additional Information
For a Box PC with a Windows operating system the status of this LED can be defined using the Industrial PC System API. Refer to NY-series Industrial Box PC User’s Manual (Cat. No. W553) for Industrial PC System API details.
The power button is used to manually switch the Box PC ON and OFF.

Additional Information

- Refer to 6-1 Power ON on page 6-2 for ON details.
- Refer to 6-2 Power OFF on page 6-3 for OFF details.
2-5 Drive Bays

The drive bays in the IPC Programmable Multi Axis Controller accept 2.5 inch Hard Disk Drives (HDD) or Solid State Drives (SSD). Depending on the model one or two drives are supported.

Additional Information

- Refer to 4-1-4 CPU Specifications on page 4-5 for the number of supported drives.
- Refer to 4-1-6 Storage Device Specifications on page 4-6 for storage device specifications.
- Refer to 5-2-1 Install a Drive on page 5-6 for install information.
- Refer to 7-2-5 Replace a Drive on page 7-15 for maintenance information.
2-6 SD Memory Card Slot

The SD Memory Card slot on the IPC Programmable Multi Axis Controller accepts SD Memory Cards with the following specifications.

- SDHC type (SD 2.0 specification)
- Up to 32 GB capacity

**Additional Information**

Refer to 2-10-2 SD Memory Cards on page 2-19 for SD Memory Card details.
2-7 PCIe Card Slot

The PCI Express (PCIe) Card slot of the IPC Programmable Multi Axis Controller accepts various PCIe Cards for specific hardware needs.

The PCIe Card connectors are available behind the cover A and the PCIe Card is mounted in the PCIe drawer B.

Additional Information

- Refer to 4-1-7 PCIe Card Specifications on page 4-7 for specifications.
- Refer to 5-2-2 Install the PCIe Card on page 5-10 for install information.
- Refer to 7-2-6 Replace the PCIe Card on page 7-20 for maintenance information.
2-8 Connectors

This section gives an overview of the available connectors for the IPC Programmable Multi Axis Controller.

2-8-1 Power Connector

The power connector on the Box PC is used to supply 24 VDC power to the Box PC. The power connector is supplied with the Box PC.

Additional Information

- Refer to 4-2-1 Power Connector Specifications on page 4-9 for specifications.
- Refer to 5-4-3 Wire the Power Connector on page 5-35 for wiring details.
- Refer to 5-5 Connect on page 5-41 for connection details.

2-8-2 I/O Connector

The I/O connector on the IPC Programmable Multi Axis Controller provides discrete signals with the following functions.
- Input signal to the Box PC when a connected UPS switches to battery power.
- Input signal to the Box PC to perform a shutdown or power ON when the signal turns ON.
- Output signal from the Box PC to indicate the power status of the Box PC.

The I/O connector is supplied with the Box PC.
2-8-3 USB Connectors

The USB connectors support USB 2.0 and USB 3.0 specifications.
All USB interfaces are protected against overcurrent and all ports support Wake-on-USB.

Additional Information

- Refer to 4-2-3 USB Connector Specifications on page 4-14 for specifications.
- Refer to 5-5 Connect on page 5-41 for connection details.
2-8-4 Ethernet Connectors

The Ethernet connectors provide 3 individual Ethernet ports on the IPC Programmable Multi Axis Controller.
Each port offers 10BASE-T/100BASE-TX/1000BASE-T Ethernet speeds.

Additional Information

- Refer to 4-2-4 Ethernet Connector Specifications on page 4-15 for specifications.
- Refer to 5-5 Connect on page 5-41 for connection details.

2-8-5 DVI Connector

The DVI interfaces supported on this connector are dependent on the configuration of the IPC Programmable Multi Axis Controller.

Additional Information

- Refer to 1-5 Product Configuration on page 1-6 for configuration details.
- Refer to 4-2-5 DVI Connector Specifications on page 4-18 for specifications.
- Refer to 5-5 Connect on page 5-41 for connection details.
2-8-6 RS-232C Connector (Optional)

Depending on the product configuration an optional RS-232C connector is available.

Additional Information

- Refer to 1-5 Product Configuration on page 1-6 for configuration details.
- Refer to 4-2-6 RS-232C Connector Specifications on page 4-19 for specifications.
- Refer to 5-5 Connect on page 5-41 for connection details.
2-9 Spare Parts

The following spare parts for the IPC Programmable Multi Axis Controller are available.

2-9-1 Battery

One battery is supplied with the Box PC. The battery supplies power to the real-time clock. The battery is located inside the Box PC.

<table>
<thead>
<tr>
<th>Model</th>
<th>Appearance</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>CJ1W-BAT01</td>
<td>![Battery Image]</td>
<td>Service life: 5 years at 25°C</td>
</tr>
</tbody>
</table>

Additional Information

Refer to 7-2-4 Replace the Battery on page 7-13 for the replacement procedure.

2-9-2 Fan Unit

The Fan Unit is available for the Box PC that has active cooling.

<table>
<thead>
<tr>
<th>Model</th>
<th>Appearance</th>
<th>Specifications</th>
</tr>
</thead>
</table>
| NY000-AF00 | ![Fan Unit Image] | • Service life: 70,000 hours of continuous operation at 40°C with 15% to 65% relative humidity  
|            |            | • Shelf life: 6 months  
|            |            | This is the storage limitation with no power supplied. We highly recommend performance testing if the Fan Unit has been stored over 6 months. |

Additional Information

Refer to 7-2-3 Replace the Fan Unit on page 7-11 for the replacement procedure.
2-9-3 Accessory Kit

The accessory kit for the Box PC.

<table>

<td></td>
<td></td>
<td>128 GB</td>
</tr>
</tbody>
</table>

Additional Information

Refer to 4-1-6 Storage Device Specifications on page 4-6 for storage device specifications.

Storage Device Considerations

For a storage device that is not an OMRON NY000-A consider the following:
• OMRON is not responsible for the operation, performance or write life of any storage device other than those supplied by OMRON.
• Test and measure the environmental performance of the intended storage device before actual operation, using the SMART monitoring feature of the selected storage device.
• Ensure the temperature and vibrations of the storage device are within the operating temperature specifications and vibration specifications during actual operation.
• Using a storage device with maximum power consumption exceeding 2W is not advised. Ensure that the SMART monitor features of the storage device are used to detect overheating.

Additional Information

• Refer to 4-1-6 Storage Device Specifications on page 4-6 for storage device specifications.
• Refer to 4-4-1 Operation Environment Specifications on page 4-21 for environment specifications, specifically temperature and vibration specifications.
2-10-5  DVI Cables

DVI cable details are provided below.
OMRON is not responsible for the operation or performance of any other brand of DVI cable.

<table>
<thead>
<tr>
<th>Model</th>
<th>Appearance</th>
<th>Cable length</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>NY000-AC00 2M</td>
<td>![DVI Cable Image]</td>
<td>2 m</td>
<td>• Supports DVI-D</td>
</tr>
<tr>
<td>NY000-AC00 5M</td>
<td>![DVI Cable Image]</td>
<td>5 m</td>
<td>• Minimum bend radius: 36 mm</td>
</tr>
</tbody>
</table>

**DVI Cable Clearance**

The DVI cable requires a minimum clearance of 90 mm from the connector entry to prevent excessive strain on the connector and cable assembly.

2-10-6  USB Type-A to USB Type-B Cables

USB Type-A to USB Type-B cable details are provided below.
OMRON is not responsible for the operation or performance of any other brand of USB Type-A to USB Type-B cable.

<table>
<thead>
<tr>
<th>Model</th>
<th>Appearance</th>
<th>Cable length</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>FH-VUAB 5M</td>
<td>![USB Cable Image]</td>
<td>5 m</td>
<td>• Minimum bend radius: 25 mm</td>
</tr>
</tbody>
</table>

**USB Type-A to USB Type-B Cable Clearance**

The USB Type-A to USB Type-B cable requires a minimum clearance of 60 mm from the connector entry to prevent excessive strain on the connector and cable assembly.
2-10-7 Industrial Monitor

Details for the recommended monitor are provided below.
OMRON is not responsible for the operation or performance of any other monitor.

<table>
<thead>
<tr>

<tr>
<td></td>
<td>![Image]</td>
<td>• Programmable brightness control</td>
</tr>
</tbody>
</table>

Additional Information
Refer to the OMRON website for specifications and manuals.

2-10-8 Power Supply

Details for the recommended power supply are provided below.
OMRON is not responsible for the operation or performance of any other power supply.

<table>
<thead>
<tr>
<th>Model</th>
<th>Appearance</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>S8VK-G□□□24</td>
<td>![Image]</td>
<td>Output voltage: 24 VDC</td>
</tr>
</tbody>
</table>

Additional Information
- Refer to 4-1-3 Power Consumption Specifications on page 4-4 for power consumption details.
- Refer to the OMRON website for specifications and manuals of the S8VK-G.
  Note that the power consumption details of the Box PC determine the minimum power rating of your power supply.
2-10-9 UPS

Details for the recommended UPS are provided below. OMRON is not responsible for the operation or performance of any other UPS.

<table>
<thead>
<tr>
<th>Model</th>
<th>Appearance</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>S8BA with revision number 04 or higher. &quot;1&quot;</td>
<td>![Image of S8BA UPS]</td>
<td>Output voltage during backup operation: 24 VDC±5%</td>
</tr>
</tbody>
</table>

*1. The revision number of the UPS can be retrieved from the serial number label on the product and the product packaging.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

<tr>
<td>2</td>
<td>Product period and sequential number</td>
</tr>
<tr>
<td>3</td>
<td>Revision number</td>
</tr>
<tr>
<td>4</td>
<td>RoHS status</td>
</tr>
</tbody>
</table>

Precautions for Safe Use

Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.

Additional Information

- Refer to 2-10-8 Power Supply on page 2-22 for power supply details.
- Refer to 4-1-3 Power Consumption Specifications on page 4-4 for power consumption details.
- Refer to the OMRON website for S8BA specifications or to the UPS S8BA User’s Manual (Cat. No. U702) for the UPS manual.
  Note that the power consumption details determine the output current/capacity of your UPS.

2-10-10 UPS Communication Cable

Communication cable details are provided below. OMRON is not responsible for the operation or performance of any other brand of communication cable.

<table>
<thead>
<tr>
<th>Model</th>

*1. Cables are available in the following lengths: 0.2, 0.3, 0.5, 1, 1.5, 2, 3, 5, 7.5, 10, 15, and 20 m. Refer to the XS5/XS6 Industrial Ethernet Connectors Catalog (Cat. No. G019) for details.

*2. Cable material LSZH. The lineup features Low Smoke Zero Halogen cables for in-cabinet use and PUR cables for out-of-cabinet use. Although the LSZH cable is single shielded, its communications and noise characteristics meet the standards. Cable colors available are blue, yellow and green.

*3. For details contact your local OMRON representative.

*4. We recommend to use the above cables and connectors together.

**Additional Information**

When making cables, connect the shield to the connectors at both ends.

The Production Data tab displays generic IPC Programmable Multi Axis Controller information. These are e.g. Model name, Lot number, Serial number, Hardware version, BIOS version, BMC version, and software versions (Industrial PC Support Utility and Industrial PC System API).

- Model Name is the configuration code of this model. Refer to 1-5 Product Configuration on page 1-6 for details.
- BMC Version is the firmware version of the Board Management Controller.

Values are not updated automatically. Select the Update Screen Button to display the latest values.
## System Status Tab

The System Status tab displays actual states and diagnostic information like internal temperature, fan revolution, battery and power supply status.

A status that requires attention is indicated with a red bar.

### Item Description

<table>
<thead>
<tr>
<th>Item</th>

<tr>
<td><strong>Fan Revolution</strong>&lt;sup&gt;<strong>2</strong>&lt;/sup&gt;</td>
<td>The actual rotation speed for each fan in revolutions per minute (r/min).</td>
</tr>
<tr>
<td></td>
<td>• First number = rotation speed of fan located closest to Power button.</td>
</tr>
<tr>
<td></td>
<td>• Second number = rotation speed of fan located closest to battery.</td>
</tr>
<tr>
<td><strong>Fan Status</strong>&lt;sup&gt;<strong>3</strong>&lt;/sup&gt;</td>
<td>The target speed for the fans is dynamically set based on the CPU temperature. The target speed is compared with the actual fan speed.</td>
</tr>
<tr>
<td></td>
<td>• <strong>OK</strong> indicates both fans are running on the target speed.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Low revolution speed</strong> indicates one or both fans do not reach the target speed. Clean the fans and replace the Fan Unit if the problem persists. Refer to 7-2-3 Replace the Fan Unit on page 7-11 for replacement details.</td>
</tr>
<tr>
<td><strong>Battery Status</strong></td>
<td>The battery status.</td>
</tr>
<tr>
<td></td>
<td>• <strong>OK</strong> indicates the battery is full.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Low</strong> indicates the battery voltage is low. Replace the battery.</td>
</tr>
<tr>
<td></td>
<td>Refer to 7-2-4 Replace the Battery on page 7-13 for replacement details.</td>
</tr>
<tr>
<td><strong>Power Supply</strong></td>
<td>The power supply status is determined by the UPS and reported to the Box PC via the I/O connector.</td>
</tr>
<tr>
<td></td>
<td>• <strong>NormalPowerSupply</strong> indicates the Box PC is powered by the 24V power supply.</td>
</tr>
<tr>
<td></td>
<td>• <strong>UPS Power Supply</strong> indicates that there is no power from the 24V power supply and the Box PC runs on battery power from the UPS.</td>
</tr>
</tbody>
</table>

<sup>*</sup>1. Not for products NY512-A£

Refer to 1-5 Product Configuration on page 1-6 for configuration details.

<sup>2</sup> The Fan Revolution will always show 0 (r/min) / 0 (r/min) for fanless models.
Refer to 1-5 Product Configuration on page 1-6 for fan details.

*3. The Fan Status will always show OK for fanless models.

Values are not updated automatically. Select the **Update Screen** Button to display the latest values.

**Installation**

The Industrial PC Support Utility is pre-installed on the Industrial Box PC and Industrial Panel PC. Download the Industrial PC Support Utility from the OMRON download website if reinstallation is required.

**Startup**

The Industrial PC Support Utility can be started from:

- Windows Start Menu
  Select **OMRON** and then **Industrial PC Support Utility**.
- Industrial PC Tray Utility
- Windows desktop shortcut

**Messages**

The Industrial PC Support Utility does not display messages in the Industrial PC Tray Utility. A battery warning and a fan warning are not displayed in the Industrial PC Tray Utility.

**Logging**

The Industrial Monitor Utility and the Industrial PC Support Utility record the operation history in the Windows event log.

Refer to 7-2-9 **Windows Event Viewer** on page 7-30 for the logged messages.
This section provides an overview of the Industrial PC Tray Utility.

**Industrial PC Tray Utility Overview**

The Industrial PC Tray Utility is a software utility that provides information about the current state of the Industrial PC, its related devices, and associated software.

When running, the Industrial PC Tray Utility is always present as a status icon in the system tray area of Windows.

**Features**

The Industrial PC Tray Utility provides the following features:

- Display the overall state of all installed OMRON utilities in the icon in the system tray area.
- Display a menu that can start all installed utilities and show the state of each installed utility.
- Display notification messages in popup windows that inform the user about the state of applications or hardware. The Industrial PC Tray Utility displays the messages provided by installed OMRON utilities. Refer to the OMRON utilities information for the messages that can be displayed.

**Menu**

Select the Industrial PC Tray Utility icon to display the menu.

- The application displays the available utilities.
- Select an entry to launch the associated utility, if applicable.
• The icons of menu items in the Industrial PC Tray Utility menu will have a warning or error symbol when applicable.

• The Industrial PC Support Utility is available in the menu when installed.

• The Industrial Monitor Utility is available in the menu when installed.

• The application area can be configured to show and launch both OMRON and third party utilities.

• The About entry shows details of the Industrial PC Tray Utility. Refer to About the Industrial PC Tray Utility on page 3-11 for details.

• The Exit entry closes the utility.

### About the Industrial PC Tray Utility

The About window shows the version of the Industrial PC Tray Utility and copyright information.

### Status Indicators on Icons

The following table provides the indicator details of the Industrial PC Tray Utility.

<table>
<thead>
<tr>
<th>Overlay type</th>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td><img src="null" alt="Icon" /></td>
<td>No OMRON utility has issued warning or error notifications.</td>
</tr>
<tr>
<td>Warning sign</td>
<td><img src="null" alt="Icon" /></td>
<td>At least one OMRON utility has issued a warning notification.</td>
</tr>
<tr>
<td>Error sign</td>
<td><img src="null" alt="Icon" /></td>
<td>At least one OMRON utility has issued an error notification.</td>
</tr>
</tbody>
</table>

### Installation

The Industrial PC Tray Utility is pre-installed on an Industrial Box PC and an Industrial Panel PC. The Industrial PC Tray Utility is included in the installers of the Industrial PC Support Utility and Industrial Monitor Utility. Install the Industrial PC Support Utility or Industrial Monitor Utility to install the Industrial PC Tray Utility.
Compatibility

This software utility can be used on PCs with Windows 7 and Windows 10.

Startup

By default the Industrial PC Tray Utility is configured to start automatically at Windows startup.

To manually start the Industrial PC Tray Utility:

1. Locate the Industrial PC Tray Utility using the Windows Start menu or the Windows search box.

2. Use the option Run as administrator to activate the Industrial PC Tray Utility.

Additional Information

The procedure to use Run as administrator is:

- For Windows 10 using the Start menu:
  Rightclick the Industrial PC Tray Utility, select More and then Run as administrator.

- For Windows 10 using Search:
  Rightclick the Industrial PC Tray Utility in the search results and select Run as administrator.

- For Windows 7 using the Start menu or Search:
  Rightclick the Industrial PC Tray Utility and select Run as administrator.

The Industrial PC Tray Utility started.
3-2-6 Power Attendant Lite Utility

This section provides an overview of the Power Attendant Lite Utility (PAL).

### Power Attendant Lite Utility Overview

The Power Attendant Lite Utility is a software utility that constantly monitors the status of the UPS that is connected to the Box PC.

When the Power Attendant Lite Utility discovers a power interruption it will send a signal to the Box PC to shut down.

Refer to the *UPS Power Attendant Lite for Windows User’s Manual* for details.

### Features

The Power Attendant Lite Utility provides the following features:

- Signal the Box PC to shut down when a power interruption is detected.
- Configure the shutdown conditions when a power interruption is detected.
- Display the state of the connected UPS using the icon in the system tray area.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Normal operation" /></td>
<td>Normal operation</td>
</tr>
<tr>
<td><img src="image" alt="Power Attendant Lite service stopped" /></td>
<td>Power Attendant Lite service stopped</td>
</tr>
<tr>
<td><img src="image" alt="UPS is supplying power from the internal battery" /></td>
<td>UPS is supplying power from the internal battery</td>
</tr>
<tr>
<td><img src="image" alt="Communication error" /></td>
<td>Communication error</td>
</tr>
</tbody>
</table>

### Compatibility

The Power Attendant Lite Utility can be used on a Box PC with one of the following operating systems:

- Windows 10
- Windows 7

### Installation

The Power Attendant Lite Utility is not pre-installed on a Box PC.

The Power Attendant Lite Utility installer is included in the installers directory (D:\OMRON-NY\Installers). Download the installer from the OMRON download website if required.

To install the Power Attendant Lite Utility:

1. Ensure the revision number of the UPS is correct.
Refer to 2-10-9 UPS on page 2-23 for details.

2 Ensure the UPS is connected to the Box PC with a USB cable.
Refer to 5-8-1 Connect UPS Using the USB Connector on page 5-53 for details.

3 Open the Power Attendant Lite Utility installer folder and activate the installer file setup.exe.

4 Follow the installer steps to complete the installation.
The Power Attendant Lite Utility is installed.

Configuration

Configure the Power Attendant Lite Utility before using the Box PC with a UPS connected using USB.

To configure the Power Attendant Lite Utility:

1 Activate the icon of the Power Attendant Lite Utility to start the software.

A UPS selection window will be displayed.

2 Select the connected UPS.
A Login window will be displayed.

3 Login with ID Admin and password omron.
The Top window with UPS status information will be displayed.

4 Configure the parameters for your specific situation.
Refer to *UPS Power Attendant Lite for Windows User’s Manual* for details.

5 Select **Detailed Setting / Other Settings / Communication Setting / UPS Communication Port** to display the parameter **COM search to UPS detection**.

6 Set the parameter to **Do not search for COM ports** to prevent interference for the COM ports.

7 Select **Submit** to save the setting.

8 Select the close button in the right top corner to exit the Power Attendant Lite Utility software.

9 Select the restart behavior of the Box PC with the BIOS Boot Menu parameter **Power Loss Control**.
   Set this parameter to **Turn On** to restart automatically after a power down from the Power Attendant Lite Utility.
   Refer to **A-1-5 BIOS - Boot** on page A-9 for details.

10 Test the UPS shutdown behavior.
   1) Start the Box PC
   2) Start applications
   3) Create a power interruption
   4) Monitor the shutdown sequence and confirm a correct shutdown
      When the shutdown sequence is not correct change parameters in the Power Attendant Lite Utility software and test the UPS shutdown behavior again.

The Power Attendant Lite Utility is configured.
The Box PC will shut down properly in case of a power supply interruption and restart automatically when the power is restored.
3-3  Software for Developers

This section provides information on the software that is available for developers.

3-3-1  Overview IPC Developer Software for Windows

This section gives an overview of the software available for developers for all Industrial PC Platform products with a Windows operating system.

<table>
<thead>
<tr>

<tr>
<td></td>
<td>Industrial PC System API</td>
</tr>
</tbody>
</table>

Select and download the software required from the OMRON download website.

3-3-2  Industrial PC System API

This section describes some of the Industrial PC System API functions.
The Industrial PC System API allows programmers to create programs that can retrieve information or set an indicator status of the product.
The API makes use of the included OMRON IPC System Service to manage the hardware.

Features

The Industrial PC System API can:
• Retrieve product information from the Industrial PC
• Retrieve system flags
• Retrieve maintenance information
• Configure and program the Watchdog*1
• Set the status of the Run LED Indicator and the ERR LED Indicator*1

*1 Only for
• Industrial Box PCs with a Windows operating system.
  These are:
  • NYB□□-□□□□1□□
  • NYB□□-□□□□2□□
  • NYB□□-□□□□3□□
  • Industrial Panel PCs with a Windows operating system.
  These are:
  • NYP□□-□□□□1□□□□□□□
  • NYP□□-□□□□2□□□□□□□
Installation

The Industrial PC System API is part of the SDK download. The Industrial PC System API is pre-installed on the Industrial Panel PC and the Industrial Box PC. Install the Industrial PC System SDK to use the Industrial PC System API on development PCs. Use the Merge Module to include the Industrial PC System API in the installer for custom applications. To use the Industrial PC System API the API needs to be referenced in your development project.

*1. Low profile cards, 2.536 inches (64.4 mm) are not supported.
4-1-8 Bracket Specifications

The metal mounting brackets mount your Box PC and they are the connection for the functional ground.

Use metal screws with a diameter of 4 mm or 5 mm to mount the brackets.

Mounting screw locations for book mount and wall mount orientation:

Additional Information

- Refer to 5-3-8 Book Mount Procedure on page 5-25 for book mount details.
- Refer to 5-3-9 Wall Mount Procedure on page 5-26 for wall mount details.
This section provides the Connector Specifications of the IPC Programmable Multi Axis Controller.

### 4-2-1 Power Connector Specifications

The power supply connector can be locked to prevent unintentional disconnection. The connector can only be inserted the correct way. The connector is a Phoenix Contact type SPC5/2-STCL-7.62 BK (1711708). The Box PC provides protection against reverse polarity.

The pin layout represents the power connector on the Box PC.

<table>

- Refer to 5-4-2 Ground on page 5-28 for grounding details.
Locking and Removing the Power Connector

The power connector automatically locks into place when the black part of the connector is held and pushed in.

Pushing both orange sliders B towards the end of the connector A will release the lock when removing the connector.

4-2-2 I/O Connector Specifications

Details of the I/O connector are provided below.
The I/O connector can be locked to prevent unintentional disconnection.
The connector can only be inserted in the correct way.
The Lock-and-Release Latch connector is a Phoenix Contact type DFMC 1,5/ 3-ST-3,5-LR BK (1711658).

</thead>
</table>
| 1   | Power Status Output*1 | Contact output | • SPST-NO contact configuration  
• 24 VDC at 2A switching capacity (resistive load)  
• Operation lifetime 150,000 cycles at 2A max.  
• Connect to SELV | • Open: The Power Status Output is OFF when the Box PC is OFF or has been disconnected from the power supply.  
• Closed: The Power Status Output is ON when the Box PC has shutdown successfully and is connected to the power supply and has not been disconnected from that power supply since power OFF.  
Refer to I/O Connector Power Status Output Details on page 4-12 for details. |
| 2   | Power ON/OFF Input*2 | Isolated transistor input (sinking or sourcing) | • ON: 8.8 VDC min./5 mA min.  
• OFF: 1.1 VDC max./0.5 mA max.  
• Connect to SELV | If the signal changes from inactive to active, the Box PC will perform one of the following operations.  
• When powered ON, the Box PC will shut down and power OFF.  
• When powered OFF, the Box PC will power ON. |
| 3   | UPS Mode Input |   |   | This input is provided to allow monitoring the state of an external UPS unit that provides a compatible power state output signal. |

*1. Refer to I/O Connector Power Status Output Details on page 4-12 for Power Status Output details.  
*2. Refer to 6-1 Power ON on page 6-2 and 6-2 Power OFF on page 6-3 for Power ON/OFF Input details.

Additional Information

Refer to 5-4-4 Wire the I/O Connector on page 5-38 for I/O connector wiring details.
I/O Connector Power Status Output Details

This section provides details of the Power Status Output relay. The Power Status Output is a relay between pin 1 and 2 of the I/O Connector.

- **Power ON Power Status Output Operation**
  
  This section provides power ON details of the Power Status Output operation. The Power Status Output turns ON to indicate that the system has been shut down and the power supply to the Box PC can be turned OFF. If power is not turned OFF, the Power Status output will turn OFF when the Box PC is turned ON.
  
  The Power Status Output is ON when the Box PC has been used and has not been disconnected from the power supply.
  
  The Power Status Output is OFF when the Box PC has been disconnected from the power supply.

![Diagram](https://via.placeholder.com/150)

- **Power OFF Power Status Output Operation**
  
  This section provides power OFF details of the Power Status Output operation. The Power Status Output turns ON to indicate that the system has been shut down and the power supply to the Box PC can be turned OFF.
  
  If power is not turned OFF, the Power Status output will stay ON. It will turn OFF when the Box PC is turned ON.
  
  If power is turned OFF, the Power Status Output will turn OFF.

**Additional Information**

Refer to 5-4-4 Wire the I/O Connector on page 5-38 for I/O connector wiring details.
## Lock and Remove the I/O Connector

The I/O connector locks into place when the black part of the connector is held and pushed in.

Tilting both levers \( B \) will release the I/O connector \( A \) from the Box PC.

---

**Additional Information**

Refer to 5-4-4 Wire the I/O Connector on page 5-38 for I/O connector wiring details.
4-2-3 USB Connector Specifications

The IPC Programmable Multi Axis Controller includes four USB connectors. Two connectors provide version 2.0 performance and two connectors provide version 3.0 performance. Details of the USB interface connectors are provided below.

The connector layout represents the USB connectors on the Box PC.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Additional Information

Refer to 5-4-2 Ground on page 5-28 for grounding details.
4-2-4 Ethernet Connector Specifications

Details of the RJ45 Ethernet connectors are provided below.
There are three Ethernet ports, each with a specific function.
The Ethernet connectors are designated in the following manner:

- Connector number 1: EtherCAT.
  This port is available for the Programmable Multi Axis Controller.
- Connector number 2: Ethernet.
  This port is available for the Programmable Multi Axis Controller and supports Modbus-TCP.
- Connector number 3: Ethernet.
  This port is available for Windows.

Additional Information

Refer to 2-10-11 Recommended EtherCAT Cables on page 2-24 for cable details.

The Ethernet connector locks automatically to prevent unintentional disconnection.

The view represents the Ethernet connector on the Box PC.
Ethernet Connector LED Indicators

Each connector has LED indicators for speed, link and activity.

DVI Connector Specifications

DVI is the standard video interface for the Box PC. The video interface depends on the model of the Box PC as specified below:

Additional Information

- Refer to 4-1-4 CPU Specifications on page 4-5 for graphics controller details.
- Refer to 5-4-2 Ground on page 5-28 for grounding details.
- Refer to A-3 DVI-I Connector Pin Details on page A-14 for pin details.

The following tables provide DVI details per CPU type.

DVI-I Connector Specifications with an Intel® Core™ i7-4700EQ CPU

4-2-6 RS-232C Connector Specifications

The optional RS-232C interface on the Box PC uses a standard SUBD9 connector. The RS-232C interface is not isolated from the internal Box PC's components.

Additional Information

• Refer to 5-4-2 Ground on page 5-28 for grounding details.
• Refer to A-4 RS-232C Connector Pin Details on page A-16 for pin details.
4-3 Software Specifications

This section provides the Software Specifications of the IPC Programmable Multi Axis Controller.

4-3-1 Available Windows Operating Systems

The available Windows Operating System is Windows Embedded Standard 7 SP1 - 64 bits.

4-3-2 Supported Languages

Languages default supported by the operating system are:

<table>
<thead>
<tr>
<th>Language</th>
<th>Windows 7</th>
<th>Windows 10</th>

</tr>
</tbody>
</table>
4-4-2 Temperature and Humidity Specifications

The allowed ambient operating temperature and ambient humidity depend on product type, CPU type, mounting orientation, and storage device type. The following sections provide temperature and humidity details per CPU type.

Temperature and Humidity Graphs

The maximum ambient operating temperature and ambient humidity are specified per CPU type, mounting orientation and storage device type. The following graphs provide ambient temperature and humidity details per storage device type and the conditions for storage.

- Operate the Box PC with a SSD within the general environmental specifications.
- Operate the Box PC with a HDD within the ambient temperature and humidity ranges as shown in the following graph.

Additional Information

Refer to the ambient temperature and humidity specifications per CPU type for specific limitations.
• Store the Box PC with a SSD within the general environmental specifications.

• Store the Box PC with a HDD within the ambient temperature and humidity ranges as shown in the following graph.

---

5-1 Unpack

This section provides details on how to unpack the IPC Programmable Multi Axis Controller.

5-1-1 Unpack Procedure

1. Check the package for damage.
   If there is any visible damage:
   - Take photos of the package and save them.
   - Inform your supplier immediately.

2. Open the package.
   Ensure not to damage the contents.

3. Ensure that all items are present.

Additional Information

Refer to 5-1-2 Items Supplied on page 5-3 for the items supplied.

5-1-2 Items Supplied

The Industrial Box PC is supplied with several items.

Additional Information

- Refer to Items Supplied with the Industrial Box PC on page 5-4 for more details.
- Refer to Items Supplied with the Brackets on page 5-5 for more details.
Items Supplied with the Industrial Box PC

This section describes the items supplied with your Industrial Box PC.

- Industrial Box PC
- Documentation:
  - Safety Precautions sheets (English and Japanese)
  - EU Compliance sheet
  - Standards and Certifications sheet
- Bag with:
  - Power connector
  - I/O connector
  - Drive bracket for drive installation
  - 4 Mounting screws for drive installation
  - PCIe Card support for PCIe Card installation
Items Supplied with the Brackets

This section describes the items supplied with the brackets for your Industrial Box PC.

Additional Information

- Refer to 2-10-1 Mounting Brackets on page 2-19 for bracket details.
- Refer to 5-3-8 Book Mount Procedure on page 5-25 for book mount installation.
- Refer to 5-3-9 Wall Mount Procedure on page 5-26 for wall mount installation.

- **Book Mount**
  
  Check if the content is complete.
  
  Supplied items:
  - 1 Book mount bracket
  - 6 Mounting screws
  - 1 Nut for the functional ground terminal connection
  - 2 Washers for the functional ground terminal connection

- **Wall Mount**
  
  Check if the content is complete.
  
  Supplied items:
  - 2 Wall mount brackets
  - 6 Mounting screws
  - 1 Nut for the functional ground terminal connection
  - 2 Washers for the functional ground terminal connection
This section describes the installable options for the IPC Programmable Multi Axis Controller.

5-2-1 Install a Drive

A drive is a storage device for the IPC Programmable Multi Axis Controller.

Additional Information

- Depending on the product configuration a drive is already installed. Refer to 1-5 Product Configuration on page 1-6 for storage details.
- Depending on the CPU type one or two drives are supported. Refer to 4-1-4 CPU Specifications on page 4-5 for the number of supported drives.
- Refer to 2-10-4 Storage Devices on page 2-20 for the recommended drive models.
- Refer to 4-1-6 Storage Device Specifications on page 4-6 for drive specifications.

Prepare the following items:

- The drive
  A drive is not supplied with the Box PC.
- The drive bracket with mounting screws
  These are supplied with the Box PC.

To install a drive:

1. Ensure the Box PC is OFF.

2. Remove the drive cover.

   1) Push the lock lever ①.
   2) Tilt the drive cover ②.
   3) Remove the drive cover ③.
3. Pull the metal shielding cover out of the Box PC.

4. Align the connectors of the drive as shown [A] on the bracket. Then insert the replacement drive [1] in the bracket and insert the 4 mounting screws [2]. Tighten these screws with a torque of 0.35 N·m.
5 Insert the bracket with the drive in the correct bay.
   • A drive for the operating system has to be inserted in bay A
   • The drive for additional storage can be inserted in bay B
   Ensure the bracket is completely in the Box PC with an extra push.

The drive bracket will lock into place when it is fully inserted.

6 Insert the metal shielding cover.
7 Mount the drive cover. 
The lock lever will click when closed correctly.

8 Finalize the drive installation when the Box PC installation is completed. 
• If the drive is inserted in bay A:
  1) Install an operating system
  2) Power OFF and then Power ON
  3) Ensure the drive is functional and confirm normal operation.
     If required set the drive as boot disk in the BIOS settings.
     Refer to A-1-5 BIOS - Boot on page A-9 for boot priority settings.
• If the drive is inserted in bay B:
  1) Ensure the drive is functional and confirm normal operation.
     If the Box PC has a Windows operating system and the storage drive is not visible in
     Windows then the drive needs to be allocated.

The drive is installed and functional.
5-2-2 Install the PCIe Card

Prepare the following items:
• The PCIe Card.
  A PCIe Card is not supplied with the Box PC.

**Additional Information**

Refer to 4-1-7 PCIe Card Specifications on page 4-7 for PCIe specifications.

• The PCIe Card mounting material: Card Support.
  This item is supplied with the Box PC.

To install the PCIe Card:

1. Ensure the Box PC is OFF.

2. Remove the two crosshead screws indicated with "open" and then pull up the PCIe Drawer.
   The indent at the side of the drawer will help you to pull the drawer from the Box PC.
3  Pull the middle of the Card Clip to unlock it and remove it from the PCIe Drawer.

4  Remove the slot cover from the PCIe Drawer. 
    The thin sheet metal frame should stay in the PCIe Drawer.

The slot cover is now removed.
5 Place the PCIe Card in the PCIe Drawer.

Ensure to insert the PCIe Card in the correct opening. Ensure the thin sheet metal frame is positioned between the PCIe Card and the PCIe Drawer to ensure a good conductive contact.

6 Place the Card Clip in the PCIe Card and PCIe Drawer 1 and then rotate the Clip 2 to lock it in place.
7. Slide the Card Support \( \textcircled{1} \) so that it supports the side of the PCIe Card. The card should be in small groove so there is support below and above the card. Rotate the Card Support \( \textcircled{2} \) to lock it in place.

8. Insert the PCIe Drawer in the Box PC and then insert the two crosshead screws that hold the PCIe Drawer in place.
9. Remove the PCIe cover if the PCIe Card has external connectors.

1) Push the lock lever ①.
2) Tilt the PCIe cover ②.
3) Remove the PCIe cover ③.

The PCIe Card is installed.
5-3 Mount

This section describes how to mount the Box PC in either a book or wall orientation inside a control panel.

**WARNING**

Ensure that installation and post-installation checks of the product are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

### 5-3-1 Installation Method in Control Panels

The IPC Programmable Multi Axis Controller must be mounted in a cabinet or a control panel. Consider the orientation, cooling distance, noise resistance, ducts and Box PC replacement when determining the space between the Box PC and other devices.

**Precautions for Safe Use**

Install the product in the correct orientation and temperature according to the specifications in the manual to prevent overheating. Not doing so may result in malfunction.

**Precautions for Correct Use**

Do not operate or store the product in the following locations. Operation may stop or malfunctions may occur.

- Locations subject to direct sunlight
- Locations subject to temperatures or humidity outside the range specified in the specifications
- Locations subject to condensation as the result of severe changes in temperature
- Locations subject to corrosive or flammable gases
- Locations subject to dust (especially iron dust) or salts
- Locations subject to exposure to water, oil or chemicals
- Locations subject to shock or vibration

**Additional Information**

- Ensure you have installed the options before you mount the product. Refer to 5-2 Install Options on page 5-6 for option details.
- Refer to 5-3-8 Book Mount Procedure on page 5-25 or 5-3-9 Wall Mount Procedure on page 5-26 for orientation details.
- Refer to 5-3-3 Temperature on page 5-16 for temperature details.
- Refer to 5-3-4 Humidity on page 5-19 for humidity details.
- Refer to 5-4 Wire on page 5-27 for wiring details.
5-3-2 Product Orientation

The Box PC can be mounted in a book \( \text{A} \) or wall \( \text{B} \ \text{C} \) orientation.

- For book mount there is one allowed orientation \( \text{A} \).
- For wall mount there are two allowed orientations, horizontally mounted \( \text{B} \) and vertically mounted \( \text{C} \).

Do not install the Box PC in other orientations.

5-3-3 Temperature

The temperature inside a control panel may be at least 10 to 15°C higher than outside the panel. Implement the following measures against overheating at the installation site and in the control panel, and allow a sufficient margin for the temperature.

Distance for Cooling

Adequate airflow around the Industrial Box PC is required.

Additional Information

- The ambient temperature must be within the operating range. Refer to 4-4-1 Operation Environment Specifications on page 4-21 for temperature specifications.
- Allow space to accommodate for the bending radius of the cables. Refer to:
  - 2-10-5 DVI Cables on page 2-21
  - 2-10-6 USB Type-A to USB Type-B Cables on page 2-21 for cable bending requirements.
Provide enough space for good air flow and ensure the following minimum distances are observed around the sides of the Box PC.

- **Book Mount**

- **Wall Mount** in landscape A or portrait B orientation

<table>
<thead>
<tr>
<th>Item</th>
<th>Minimum distance *1</th>
</tr>
</thead>
<tbody>
<tr>
<td>X</td>
<td>50 mm</td>
</tr>
<tr>
<td>Y</td>
<td>100 mm</td>
</tr>
<tr>
<td>Z</td>
<td>50 mm</td>
</tr>
</tbody>
</table>

*1. Measure the minimum distances X and Y at the air openings in the sides of the Box PC.
High Temperatures

Use the following cooling methods as required, taking into account the ambient temperature and the amount of heating inside the panel.

- **Natural Cooling**

  Natural cooling relies on natural ventilation through slits in the panel, rather than using cooling devices such as fans or coolers. When using this method, observe the following points.
  - Do not install the Box PC at the top of the panel, where hot air tends to stagnate.
  - To provide ventilation space above and below the Box PC, leave sufficient distance from other devices, wiring ducts, etc.
  - Do not mount the Box PC in the wrong direction (e.g., vertically or upside down). Doing so may cause abnormal heating in the Box PC.
  - Do not install the Box PC directly above any heat-generating equipment, such as heaters or transformers.
  - Do not install the Box PC in a location exposed to direct sunlight.

- **Forced Ventilation**

  Forced ventilation with a fan in the top of the control cabinet.

- **Forced Air Circulation**

  Forced circulation with a fan inside the closed control cabinet.
● Room Cooling

Cool the entire room where the control panel is located.

Low Temperatures

The Box PC may not start normally if the temperature is below 0°C when the power is turned ON. Maintain an air temperature of at least 5°C inside the panel, by implementing measures such as installing a low-capacity space heater in the panel. Alternatively, leave the Box PC power ON to keep the Box PC warm.

5-3-4 Humidity

Rapid temperature changes can cause condensation to occur, resulting in malfunctioning due to short-circuiting. When there is a possibility of this occurring, take measures against condensation, such as leaving the Box PC power ON at night or installing a heater in the control panel to keep it warmer.

5-3-5 Vibration and Shock

The Box PC is tested for conformity with the sine wave vibration test method (IEC 60068-2-6) and the shock test method (IEC 60068-2-27) of the Environmental Testing for Electrotechnical Products. It is
designed so that malfunctioning will not occur within the specifications for vibration and shock. If, however, the Box PC is to be used in a location in which it will be directly subjected to regular vibration or shock, then implement the following countermeasures:

- Separate the Box PC control panel from the source of the vibration or shock. Or secure the Box PC and the control panel with rubber padding to prevent vibration.
- Make the building or the floor vibration-resistant.
- Prevent shocks when other devices in the panel, such as electromagnetic contactors, operate. Secure either the source of the shock or the Box PC with rubber padding.

5-3-6 Atmosphere

Using the Box PC in any of the following locations can cause defective contact with connectors and corrosion of components. Implement countermeasures such as purging the air as required.

- In locations exposed to dust, dirt, salt, metal powder, soot, or organic solvents, use a panel with an airtight structure. Be careful of temperature increases inside the panel.
- In locations exposed to corrosive gas, purge the air inside the panel to clear the gas and then pressurize the inside of the panel to prevent gas from entering from outside.
- In locations where flammable gas is present, either use an explosion-protected construction or do not use the Box PC.

5-3-7 Electrical Environment

When installing or wiring devices, make sure that there will be no danger to people and that noise will not interfere with electrical signals.

Installation Location

Install the Box PC as far away as possible from high-voltage (600 V or higher) and power devices to ensure safe operation and maintenance.

Example of Recommended Equipment Arrangement

**OK**

- Control panel
- Control panel
- High-voltage power panel

Example of Poor Equipment Arrangement

**NG**

- Control panel
- Control panel
- High-voltage power panel

Examples of Equipment Arrangement in Panel with High-voltage Devices
### Hardware Arrangement

The coils and contacts in electromagnetic contacts and relays in an external circuit are sources of noise. Do not install them close to the Box PC. Locate them at least 100 mm away from the Box PC.

#### Example of Arrangement in Panel

- DC I/O device
- AC I/O device
- Terminal block
- OMRON product

### Wire Layout for the Power Supply

Observe the following points when wiring the power supply system.

- Separate the Box PC power supply from the I/O device power supply and install a noise filter near the Box PC power supply feed section.
- Use an isolating transformer to significantly reduce noise between the Box PC and the ground. Install the isolating transformer between the Box PC power supply and the noise filter, and do not ground the secondary coil of the transformer.
- Keep the wiring between the transformer and the Box PC as short as possible, twist the wires well, and keep the wiring separate from high-voltage and power lines.

#### Power Supply System Diagram

- Power circuits
- Power supply for general operations circuits
- I/O power supply for Omron product
- Noise filter
- Unit power supply for Omron product
- Outlet (for peripheral devices)
Wire External I/O Signal Lines

Observe the following points when wiring the external I/O signal lines.

• To absorb reverse electromotive force when an inductive load is connected to an output signal, connect a surge suppressor near the inductive load in an AC circuit, or connect a diode near the inductive load in a DC circuit.

![Diagrams showing surge suppressors and diodes]

Input Signal Noise Countermeasures

- Connect a diode in a DC circuit.

Output Signal Noise Countermeasures

- Connect a surge suppressor in an AC circuit.
- Connect a diode in a DC circuit.

- Never bundle output signal lines with high-voltage or power lines, and do not route them in close proximity or parallel to such lines. If output signal lines must be routed in close proximity to such lines, place them in separate ducts or conduits. Be sure to ground the ducts or conduits.

I/O Cable Arrangement

- If the signal lines and power lines cannot be routed in separate ducts, use shielded cable. Connect the shield to the ground terminal at the Box PC, and leave it unconnected at the input device.
- Wire the lines so that common impedance does not occur. Such wiring will increase the number of wires, so use common return circuits. Use thick wires with sufficient allowance for the return circuits, and bundle them with lines of the same signal level.
- For long I/O lines, wire the input and output signal lines separately.
- Use twisted-pair wires for pilot lamps (and particularly lamps with filaments).
- Use countermeasures, such as CR surge absorbers and diodes, for input device and output load device noise sources, as required.

External Wiring

Wiring, and noise countermeasures in particular, are based on experience, and it is necessary to closely manage wiring based on experience and information in the manuals.

Wiring Routes

Each of the following combinations includes different signal types, properties, or levels. They will cause the signal-to-noise ratio to drop due to factors such as electrical induction. As a general rule when wiring, either use separate cables or separate wiring routes for these items. Future maintenance operations and changes to the system will also be made easier by carefully organizing the wiring from the start.
• Power lines and signal lines
• Input signals and output signals
• Analog signals and digital signals
• High-level signals and low-level signals
• Communications lines and power lines
• DC signals and AC signals
• High-frequency devices (such as Inverters) and signal lines (communications)

(Routing of) Wiring

Observe the following points when wiring power supply and signal cables.

• When routing signal cables with differing characteristics through the same duct, always keep them separated.
• As much as possible, avoid routing multiple power supply lines through the same duct. If it cannot be avoided, then construct a partition between them in the duct and ground the partition.

Partitioning Methods for Signal and Power Supply Cables

• To avoid overheating the conduits when using conduits for wiring, do not place wires for a single circuit in separate conduits.
- Power cables and signal cables adversely affect each other. Do not wire them in parallel.
- Noise induction may occur if the Box PC is installed in a panel that includes high-voltage devices. Wire and install them as far apart as possible.
- Either install the Box PC a minimum of 200 mm away from high-voltage lines or power lines, or place the high-voltage lines or power lines in metal tubing and completely ground the metal tubing to 100 Ω or less.

![Example: Separating an OMRON product from Power Lines](image)

**Wiring Ducts**

Whenever possible, route the cables and wires through wiring ducts. Install the wiring ducts so that it is easy to route the wires from the IPC Programmable Multi Axis Controller directly into the duct.

**Additional Information**

Refer to *Distance for Cooling* on page 5-16 for the minimum required distances.

It is convenient to use wiring ducts that have the same depth as the IPC Programmable Multi Axis Controller.

![Duct Product](image)

**Other Precautions**

Basic I/O Units have both plus and minus commons, so pay attention to the polarity when wiring.
5-3-8 Book Mount Procedure

Use the following procedure to mount the IPC Programmable Multi Axis Controller in the book orientation.

**Additional Information**

- Refer to 5-4-2 Ground on page 5-28 for grounding details.
- Refer to 2-10-1 Mounting Brackets on page 2-19 for the bracket model.

To mount the Box PC:

1. Mount the Bracket [A] to the Industrial Box PC [C] with the 6 Phillips screws [B] supplied with the brackets. Tighten these screws with a torque of 0.5 N·m.

2. Mount the Box PC with the bracket in position.
   - Drill the four holes at the location where the Box PC with bracket will be mounted. Refer to 4-1-8 Bracket Specifications on page 4-8 for details.
• Position the Industrial Box PC with bracket in the mounting location.
• Insert screws through the bracket into the mounting surface.
  Note that these screws are not in the scope of delivery.
• Tighten all four screws with a torque of 0.5 N·m.

The Box PC is mounted.

5-3-9 Wall Mount Procedure

Use the following procedure to mount the Box PC in the wall orientation.

Additional Information

• Refer to 5-4-2 Ground on page 5-28 for grounding details.
• Refer to 2-10-1 Mounting Brackets on page 2-19 for the bracket model.

To mount the Box PC:

1 Mount the Brackets A to the Industrial Box PC C with the 6 Phillips screws B supplied with the brackets.
  Tighten these screws with a torque of 0.5 N·m.

2 Mount the Industrial Box PC with the brackets in position.
  • Drill the four holes at the location where the Box PC with brackets will be mounted.
    Refer to 4-1-8 Bracket Specifications on page 4-8 for details.
  • Position the Industrial Box PC with bracket in the mounting location.
  • Insert screws through the bracket into the mounting surface.
    Note that these screws are not in the scope of delivery.
  • Tighten all four screws with a torque of 0.5 N·m.

The Box PC is mounted.
5-4 Wire

This section describes how to wire the IPC Programmable Multi Axis Controller.

5-4-1 Wiring Warnings and Cautions

This section describes the Warnings and Cautions when wiring the IPC Programmable Multi Axis Controller.

⚠️ WARNING
Provide safety measures in external circuits to ensure safety in the system if an abnormality occurs due to malfunction of the product or due to other external factors affecting operation. Not doing so may result in serious accidents due to incorrect operation.

⚠️ WARNING
Emergency stop circuits, interlock circuit, limit circuits, and similar safety measures must be provided in external control circuits.

⚠️ WARNING
Unintended behavior may occur when an error occurs in internal memory of the product. As a countermeasure for such problems, external safety measures must be provided to ensure safe operation of the system.

 المياهية for Safe Use

Do not let metal particles enter the product when preparing the panel. Do not allow wire clipplings, shavings, or other foreign material to enter any product. Otherwise, the product burning, failure, or malfunction may occur. Cover the product or take other suitable countermeasures, especially during wiring work.
This section describes how to ground the IPC Programmable Multi Axis Controller.

⚠️ WARNING
Always connect to a ground of 100 Ω or less when installing the product.

⚠️ Caution
The product has an internal non-isolated DC power supply. Circuit ground (0 VDC) and frame ground are connected together. When connecting a non-isolated device or a non-isolated interface to the product, take appropriate actions to avoid communication failures or damage to the mentioned ports.

Never ground the 24 VDC side of the power supply. This may cause a short circuit.

The shielding of the communication connectors are directly bonded to the case and to the functional ground of the Box PC.

The shield of a communication cable should be terminated to ground at both ends of the cable with a low impedance connection. A large surface area surrounding the entire cable shield ensures a low impedance connection, avoid the use of pigtails.

Potential differences between the two connected communicating devices might cause an equipotential current to flow through the shielding connected at both ends.

To avoid equipotential currents on the cable shields, an additional equipotential bonding conductor must be installed.

Refer to IEC 61918 for guidelines regarding conductor sizing and length to prevent a voltage offset between two communicating devices exceeding 1 V.

Make sure to run the bonding conductor in close proximity to the communication cable.
Considerations for Earthing Methods

Local potential fluctuations due to lightning or noise occurred by power devices will cause potential fluctuations between ground terminals of devices. This potential fluctuation may result in device malfunction or damage. To prevent this, it is necessary to suppress the occurrence of a difference in electrical potential between ground terminals of devices. You need to consider the earthing methods to achieve this objective.

The recommended earthing methods for each usage condition are given in the following table.

<table>
<thead>
<tr>
<th>Specification of communications cables</th>
<th>Earthing methods</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Equipotential bonding system</td>
<td>Star earthing</td>
<td>Daisy chain</td>
</tr>
<tr>
<td>The cable shield connected to the connector hood at both ends of the communications cable</td>
<td>Recommended</td>
<td>Not recommended</td>
<td>Not recommended</td>
</tr>
</tbody>
</table>

Additional Information

- In a country or region where the earthing method is regulated, you must comply with the regulations. Refer to the applicable local and national ordinances of the place where you install the system, or other international laws and regulations.
- Ethernet switches are used with the EtherNet/IP. For information on the environmental resistance of the Ethernet switch to use, the grounding between Ethernet switches, or the specifications of cables, ask the Ethernet switch manufacturer.

Each of these earthing methods is given below.
Equipotential Bonding System

Equipotential bonding is an earthing method in which steel frames and building structures, metal ducts and pipes, and metal structures in floors are connected together and make connections to the earth trunk line to achieve a uniform potential everywhere across the entire building. We recommend this earthing method.

The following figure shows an example of an equipotential bonding system. Connect the main earthing terminal and building structures together with equipotential bonding conductors and embed the mesh ground line in each floor. Connect the ground line of each control panel to the equipotential bonding system.
## Star Earthing

If the earthing method used for the building is not equipotential bonding or the earthing system is unknown, choose (a) from among the earthing methods given below.

a. Connecting devices and noise sources to separate earth electrodes
   This is an earthing method to separately ground an earth electrode of the device that is connected with a communications cable or other devices and an earth electrode of a high-power device that could be a noise source, such as a motor or inverter. Each earth electrode must be ground to 100 Ω or less.
   Connect the ground lines of the device that is connected with a communications cable and other devices as a bundle to a single earth electrode. Be sure that the earth electrode is separated by a minimum of 10 m from any other earth electrode of a device that could be a noise source.

b. Connecting devices and noise sources to a common earth electrode
   This is an earthing method to connect the device that is connected with a communications cable, other devices, and a device that could be a noise source, to a common earth electrode. This earthing method is not recommended because the device that could be a noise source may interfere electromagnetically with other devices.
Daisy Chain

This is an earthing method to connect the device that is connected with a communications cable, other devices, and a device that could be a noise source using a daisy-chain topology to a common earth electrode.

This earthing method is not recommended because the device that could be a noise source may interfere electromagnetically with other devices.
## Ground Connection Details

This section provides details about the ground connection. Use the functional ground terminal on the mounting bracket(s) to ground your Industrial Box PC. The washers and nut are supplied with the bracket(s). Refer to Items Supplied with the Brackets on page 5-5 for details.

### Book Mount

![Book Mount Diagram]

Mount the ground connection wire to the functional ground terminal using the washers and nut. Tighten the nut with a torque of 1.2 N·m max. Refer to 5-3-8 Book Mount Procedure on page 5-25 for book mounting details.

### Wall Mount

![Wall Mount Diagram]

Mount the ground connection wire to the functional ground terminal using the washers and nut. Tighten the nut with a torque of 1.2 N·m max. Refer to 5-3-9 Wall Mount Procedure on page 5-26 for wall mounting details.
● Crimp terminals

Use crimp terminals with dimensions $X = M4$ and $Y = 8$ mm max.
5-4-3 Wire the Power Connector

This section describes how to wire the power connector.

Precautions for Safe Use

- Do not perform a dielectric strength test.
- Always use the recommended uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption. Back up the system files in the planned way to prevent data loss and other system file integrity issues caused by incorrect operation.

Additional Information

- The selected conductor size must match with the used maximum power supply capacity or an overcurrent protection device must be used.
- The used wires and the overcurrent protection device must meet the applicable national standards.
  Standards are:
  - NEC (National Electric Code)
  - CEC (Canadian Electrical Code)
  - international applicable standards
- Refer to 4-1-2 General Electrical Specifications on page 4-3 for electrical specifications.
- Refer to 4-1-3 Power Consumption Specifications on page 4-4 for power consumption specifications.
- Refer to 2-10-9 UPS on page 2-23 for UPS information.
## Power Connector Wiring Materials

Use the power supply connector that was supplied to connect the power supply to the IPC Programmable Multi Axis Controller.

- Select power supply conductors with consideration to the voltage drop and heat generation for the cable length at the installation environment.
- Always use twisted wires to minimize the occurrence of electrical disturbance.
- Recommended power supply conductor sizes are provided in the table.

<table>
<thead>

- Power Supply Connector

## DC Power Supply

The OMRON S8VK-series power supply is recommended for use with the IPC Programmable Multi Axis Controller.

### Additional Information

- Refer to 2-10-8 Power Supply on page 2-22 for more information.
- Refer to 4-1-3 Power Consumption Specifications on page 4-4 for power consumption details.
Power Connector Wiring Procedure

Use the following procedure to wire the power connector.

1. Remove the sheath from the power supply wires.

   Precautions for Safe Use

   Observe the following precautions to prevent broken wires.
   • When you remove the sheath, be careful not to damage the conductor.
   • Connect the conductor without twisting the wires.
   • Do not weld the conductors. Doing so may cause the wires to break with vibration.

2. Insert a screwdriver in the small opening above the cable opening 1 to unlock the cable entry and then push the wire all the way to the back of the cable opening 2.

![Diagram](image)
I/O Connector Wiring Procedure

Use the following procedure to wire the I/O connector.

1. Remove the sheath from the wires.

Precautions for Safe Use

Observe the following precautions to prevent broken wires.
- When you remove the sheath, be careful not to damage the conductor.
- Connect the conductor without twisting the wires.
- Do not weld the conductors. Doing so may cause the wires to break with vibration.

2. Remove the I/O connector from the Box PC.

3. Insert a screwdriver in the small groove above the cable entry ① to unlock the cable entry and then push the wire all the way to the back of the cable opening ②.

4. Remove the screwdriver.
Do not apply stress to the cable after you have connected the wires.
5-5 Connect

This section describes how to connect the IPC Programmable Multi Axis Controller.
5-5-1 Connector Identification

The Industrial Box PC connectors are shown below.

<table>

</table>
### 5-5-2 Connection Procedure

Use the following procedure to connect the IPC Programmable Multi Axis Controller.

Ensure the Box PC is securely fastened to the mounting surface.

Ensure the mounted Box PC can be connected to power and peripheral devices. Remove dust covers where applicable and store them in a safe place.

---

#### Additional Information

- Refer to 5-3 Mount on page 5-15 for mounting details.
- Refer to:
  - 2-10-5 DVI Cables on page 2-21
  - 2-10-6 USB Type-A to USB Type-B Cables on page 2-21
  - individual cable specifications for cable bending requirements and connector clearance.

---

Use the following procedure to connect the Box PC:

1. Ensure the ground terminal is connected.
   Refer to 5-4-2 Ground on page 5-28 for grounding details.

2. Connect the power connector A.
   Hold the black part to enable the auto-locking mechanism.

   ![Diagram of connector A](image)

   Do not push the orange sliders B in the direction of the Box PC because this will unlock the connector.
3 Connect the I/O connector.
Hold the black part A when inserting the connector, this enables the auto-locking mechanism.

Do not tilt the orange levers B because this will unlock the connector.

4 Connect an external monitor such as the Industrial Monitor.
Connect the monitor to the DVI connector and tighten the fastening screws or use the optional NYML connector.
For an Industrial Panel PC this is optional because a monitor is integrated.

5 Connect a device to the optional interface (DVI, RS-232C or NYML) if applicable and tighten the fastening screws when applicable.

6 Connect the USB ports to peripheral devices.

7 Connect the Box PC to the required Ethernet interface connector(s).
Refer to 5-5-3 Ethernet Connection Procedure on page 5-44 for Ethernet port details.
The Box PC is connected.

5-5-3 Ethernet Connection Procedure

Use the following procedure to connect the Ethernet connectors of the IPC Programmable Multi Axis Controller.

1 Remove the dust caps from the Ethernet ports to be connected.

2 Connect Ethernet Port 1 of the Box PC to the EtherCAT network.

3 Connect Ethernet port 2 of the Box PC to the Modbus-TCP network.

4 Connect Ethernet port 3 of the Box PC to a normal Ethernet network.
The Ethernet connectors are connected.
5-6 Initial Power ON

This section describes how to Power ON the IPC Programmable Multi Axis Controller for the first time.

**WARNING**

Ensure that installation and post-installation checks of the product are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

5-6-1 Initial Power ON Procedure

Use the following procedure to power ON the IPC Programmable Multi Axis Controller for the first time.

1. Ensure the following conditions are present before applying power for the first time:
   - The Box PC is securely fastened to the mounting surface.
   - The Box PC is connected to ground.
   - All connectors are securely fastened.

2. Ensure that the connected monitor(s) is powered ON.

3. Connect a keyboard and/or a mouse.

**Additional Information**

- If using an OMRON Industrial Monitor this may not be required because it has touch functionality.
- Do not connect additional storage devices before the installation of the operating system completed. Adding storage devices like a USB flash drive, an SD memory card or a PCIe card might influence the default drive letter sequence.

4. Ensure the power supply is ON.

**Precautions for Safe Use**

Always check the power supply and power connections before applying power. Incorrect power connections can damage the product or cause burning.

5. Press the power button and release within 1 second.

Refer to 2-4 Power Button on page 2-9 for the power button location.

The Box PC starts and the PWR LED will go ON.

**Additional Information**

- Do not connect or disconnect the DVI-D cable while power is supplied to the Box PC.
- If a Windows operating system is preinstalled:
  - the Windows configuration will automatically start
  - refer to Windows Startup First Time for details

6. Verify the ERR LED is OFF.
The Box PC is ON and if an operating system is installed it will start.

**Precautions for Safe Use**

Always use the SMART monitoring feature for storage devices that do not comply to the Omron Storage Device Specifications. Monitor the operating temperature and vibrations to ensure they stay within the environmental specifications of the storage device.

**Additional Information**

- The first time initialization will prepare the system and automatically reboot the Box PC when required.
- Install support software to fully utilize your Box PC and optional connected hardware like the Industrial Monitor.
5-6-2  Windows Startup First Time

Use the following procedure for the first time startup of Windows on your Box PC.

Additional Information

Do not power OFF the Box PC during this procedure!
At the end of this procedure an automatic restart will result in the Windows home screen.

1  Ensure an input device is present.
   • For an Industrial Box PC connect a keyboard and mouse or a touch monitor.
   • For an Industrial Panel PC touch functionality is available. A keyboard and mouse are not required.

2  Follow the windows installation procedure.
   Pay special attention to the following steps:
   • Language
     Select the preferred language in the Language Selection Window
     Select the language carefully, the selected system language can not be changed.
     Refer to 4-3-2 Supported Languages on page 4-20 for supported languages.
   • Legal stuff like license agreements
     • Windows 10: Select Accept to accept the combined Windows and OMRON license agreements.
     • Windows 7: Select Accept separately for Windows and for the OMRON utilities.
   • Settings
     • Windows 10: Select Customize instead of Use Express settings.
       Set the settings according to your application environment.
     • Windows 7: Select Use recommended settings.
     • Create a user account and password and enter the password hint

   WARNING

   Security setting adjustments should only be performed by the engineer in charge that possesses a thorough understanding of the security settings. Selecting non-recommended security settings can put your system at risk.

Precautions for Safe Use

• Choose an OS password that is not obvious to prevent unauthorized access.
• Remember the OS user name and password. The product is inaccessible without it.

The Box PC will automatically restart.
A black screen will be visible for a few seconds and then the Box PC will boot to the Windows start screen.

3  Login

4  Adjust the backlight, Logo LED, and Status LED brightness of the monitor(s) to your settings.
Additional Information

- Use the Industrial Monitor Utility to adjust the display and/or connected OMRON Industrial Monitor.
- Verify that the Box PC is responding to finger touches on the touchscreen of the product.

5 Install any third party software and drivers that may be required for your applications.

Precautions for Safe Use

Before operating the system, please make sure the appropriate software is installed and configured. Doing so may prevent unexpected operation.
5-7 Install Software

This section describes how to install the software for the IPC Programmable Multi Axis Controller.

5-7-1 Internet Browser

Depending on the operating system an Internet Browser is preinstalled.
- For Windows 10 the standard Internet Browser is installed.
- For Windows 7 an executable file for browser installation is provided in the user data partition of the drive. For Windows 7 use the procedure below to perform the browser installation.

Additional Information

- Check the IT policy of your company for available software and for details on the software environment the IPC Programmable Multi Axis Controller will operate in.
- Install all updates and ensure the browser stays up-to-date.

To install the available Internet Browser in a Windows 7 operating system:

1. Use Windows Explorer to examine the contents of the user data partition mapped as drive letter D:

2. Open the Installer folder (D:\OMRON-NY\Installers) and locate the Internet Explorer installer files.

3. Select the installer suitable for your system (32/64 bits) and language (English/Japanese).

4. Ensure there is a connection to the Internet.

5. Launch the installer to begin the installation process.

6. Follow the installer steps to complete the browser installation.

7. Download and install the latest updates via Windows Update.

The Internet Browser is installed in Windows 7.
5-7-2 Firewall

An industrial network should be separated from an office network. Depending on the operating system a Firewall is preinstalled.

- For Windows 10 the standard firewall software is installed and enabled.
- For Windows 7 the Firewall software is not installed.

Precautions for Safe Use

- Separate the machine network segment from the office network to avoid communication failures.
- Install all updates and ensure the firewall stays up-to-date.

Additional Information

Check the IT policy of your company for available software and for details on the software environment the IPC Programmable Multi Axis Controller will operate in.

5-7-3 Anti-virus Software

The Windows operating system is vulnerable for viruses. Anti-virus software should be installed on the Windows operating system. Depending on the operating system Anti-virus software is preinstalled.

- For Windows 10 the standard Anti-virus software is installed and enabled.
- For Windows 7 Anti-virus software is not installed.

Additional Information

Check the IT policy of your company for available software and for details on the software environment the IPC Programmable Multi Axis Controller will operate in.

Precautions for Safe Use

- Make sure that your operating system environment is protected against malicious software and viruses.
- Install all updates and ensure virus definitions stay up-to-date.
5-7-4 Drivers and Custom Software

Use the following procedure to install drivers and custom software on your IPC Programmable Multi Axis Controller.

- For an Industrial PC without Operating System download the drivers from the OMRON download website.
- For an Industrial PC with a Windows operating system the drivers for most OMRON devices and common third party devices are already available on the product. They will be installed automatically after the initial Windows configuration or upon connection of a device to the Box PC.

1. Install drivers that are required for the application.

2. Install third-party software that is required for application.
   Follow the installation instructions as supplied with the driver or software.

Precautions for Safe Use

Before operating the system, please make sure the appropriate software is installed and configured. Doing so may prevent unexpected operation.

5-7-5 Customize Windows

Windows provides customization tools.
Using these tools is only allowed for experienced software engineers.

Additional Information

- Refer to A-2-1 Enhanced Write Filter on page A-11 for EWF details.
- Refer to A-2-2 File-Based Write Filter on page A-12 for FBWF details.
5-8 Connect UPS

The OMRON S8BA UPS protects the Box PC from power failures, voltage variations and instantaneous voltage drops. Short power interruptions will be backed up by the UPS and the Box PC will continue normal operation. The UPS signals the Box PC when a power failure occurs and then the Box PC can shutdown normally without data loss. The Box PC can automatically start up again when the power is restored.

To connect the Box PC to the OMRON S8BA UPS use one of the following two options:

- The USB connector and Power Attendant Lite Utility Software.
  Refer to 5-8-1 Connect UPS Using the USB Connector on page 5-53 for details. This is the preferred connection method.
- The I/O connector and a custom software program
  Refer to 5-8-2 Connect UPS Using the I/O Connector on page 5-56 for details.

**WARNING**

The use of an uninterruptible power supply (UPS) allows normal operation to continue even if a momentary power failure occurs, possibly resulting in the reception of an erroneous signal from an external device affected by the momentary power failure. Take external fail-safe measures. Where necessary, monitor the power supply voltage on the system for external devices and use it as an interlock condition.

**Precautions for Safe Use**

- Always use an uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption.
- Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
- Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.

**Additional Information**

- The minimum power requirements of the UPS are dependent on the power consumption. Refer to 4-1-3 Power Consumption Specifications on page 4-4 for power consumption details.
- Refer to the OMRON website for S8BA specifications or to the UPS S8BA User's Manual (Cat. No. U702) for the UPS manual.
  Note that the power consumption details determine the output current/capacity of your UPS.
5-8-1 Connect UPS Using the USB Connector

The Power Attendant Lite Utility software monitors the UPS status via the USB interface and shuts down the IPC Programmable Multi Axis Controller when needed.

UPS Drivers and the required software is available.
- For Box PCs with Windows 10 or Windows 7 preinstalled:
  - Drivers for the S8BA UPS are pre-installed
  - Installation files and manual for the Power Attendant Lite Utility are available in the directory D:\OMRON-NY\Installers\Power Attendant Lite Utility
  - Installation files and manual for the UPS Settings Utility are available in the directory D:\OMRON-NY\Installers\UPS Settings Utility
- For all other Box PCs following software can be downloaded from the OMRON download site:
  - Drivers for the S8BA UPS
  - Installation files and manual for the Power Attendant Lite Utility
  - Installation files and manual for the UPS Settings Utility (Windows only)

Precautions for Safe Use

- Always use an uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption.
- Use an Omron S8BA UPS with the correct revision number to prevent improper system shut-down.
- Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.

Follow the steps below to connect the S8BA UPS with a USB cable and to configure it correctly. Refer to 2-10-9 UPS on page 2-23 for more information.

1. Ensure the revision number of the UPS is correct. Refer to 2-10-9 UPS on page 2-23 for more information.

2. For Box PCs that do not have Windows pre-installed: Download the above mentioned software.

3. Wire the S8BA UPS.
   1) Wire the input of the UPS to the output of the Power Supply.
   2) Wire the output of the UPS to the power connector of the Box PC.
   3) Ground the UPS.
   4) Connect the USB port of the S8BA UPS to the USB port of the Box PC using the USB cable provided with the S8BA UPS.
4 Supply power to the Power Supply.

5 Press and hold the UPS power button until *On* appears on the UPS display.

6 Power ON the Box PC and then wait until the device drivers are successfully installed.

7 Configure the UPS using the UPS Settings Utility.
   Refer to *UPS Setting Utility Instruction Manual for S8BA/BU-2RWL* for details.

8 Install the Power Attendant Lite Utility.
   Refer to *Installation* on page 3-13 for details.

9 Configure the UPS using the Power Attendant Lite Utility.
   Refer to *Configuration* on page 3-14 for details.

10 Configure the Box PC to auto-start after power loss within the BIOS settings.
   • Refer to *A-1-1 BIOS Overview* on page A-2 for details on BIOS changes.
   • Refer to *A-1-5 BIOS - Boot* on page A-9 for power loss BIOS details.

11 Simulate a power interruption and confirm a correct shutdown of the Box PC.
   • Start the Box PC
   • Start applications
   • Create a power interruption
   • Monitor the shutdown sequence and confirm a correct shutdown sequence

The UPS is connected and configured.
The Box PC will shut down properly in case of a power supply interruption and restart automatically when the power is restored.
Additional Information

- The default Input sensitivity setting is Standard voltage sensitivity and this is correct. Do not set this parameter to Low voltage sensitivity. Doing so can cause a system malfunction when switching to battery mode.
- The UPS Setting Utility can not be used when the Power Attendant Lite Utility is active. To use the UPS Setting Utility:
  1. Right-click the Power Attendant Lite Utility icon and select Agent Stop.
  2. Use the UPS Setting Utility.
  3. Right-click the Power Attendant Lite Utility icon and select Agent Start.
5-8-2 Connect UPS Using the I/O Connector

The I/O connector of the IPC Programmable Multi Axis Controller:
• receives the power status of the UPS with the UPS Mode Input when the Box PC has a Windows operating system. For other operating systems this input is not functional.
• indicates the power status of the Box PC to the UPS with the Power Status Output.

Additional Information
• A UPS connection using the I/O connector is only possible for a Box PC with a Windows operating system. For all other operating systems use the USB connector to connect the UPS. Refer to 5-8-1 Connect UPS Using the USB Connector on page 5-53 for details.
• The Box PC does not react automatically to the UPS Mode Input. A custom software program is required to shut down the Box PC when needed.

UPS Drivers and the required software is available.
• For Box PCs with Windows 10 or Windows 7 preinstalled:  
  • Drivers for the S8BA UPS are pre-installed  
  • Installation files and manual for the UPS Settings Utility are available in the installer directory D:\OMRON-NY\Installers\UPS Settings Utility  
• For all other Box PCs following software can be downloaded from the OMRON download site:  
  • Drivers for the S8BA UPS  
  • Installation files and manual for the UPS Settings Utility (Windows only)

Precautions for Safe Use
• Always use the recommended uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption.
• Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
• Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.

Follow the steps below to connect the S8BA UPS to the I/O connector of the Box PC and to configure it correctly.
Refer to 5-4-4 Wire the I/O Connector on page 5-38 for I/O Connector details.

1 Ensure the revision number of the UPS is correct. 
Refer to 2-10-9 UPS on page 2-23 for more information.

2 For Box PCs that do not have Windows pre-installed: Download the above mentioned software.

3 Wire the S8BA UPS. 
1) Wire the input of the UPS to the output of the Power Supply. 
2) Wire the output of the UPS to the power connector of the Box PC. 
3) Ground the UPS. 
4) Connect the Contact port of the S8BA UPS to the I/O port of the Box PC with the connection cable S8BW-02.
4 Power ON the Box PC.

5 Configure the UPS.
   1) Connect the USB cable supplied with the UPS to the USB connector of the UPS and to the USB connector of the Box PC.
   2) Configure the UPS using the UPS Settings Utility. Refer to UPS Setting Utility Instruction Manual for S8BA/BU-2R for details.
   3) Remove the USB cable between the UPS and the Box PC.

6 Configure the Box PC to auto-start after power loss within the BIOS settings.
   • Refer to A-1-1 BIOS Overview on page A-2 for details on BIOS changes.
   • Refer to A-1-5 BIOS - Boot on page A-9 for power loss BIOS details.

7 Create a software program that monitors the UPS Mode Input and initiates Power OFF of the Box PC when the UPS Mode Input becomes active.
   If the Box PC has a Windows operating system then use the Industrial PC System API to create the software program. Refer to NY-series Software Development Kit User’s Manual for API details.

8 Install the created software program.

9 Test the created software program and ensure it functions correctly.

10 Simulate a power interruption and confirm a correct shutdown of the Box PC.
   • Start the Box PC
   • Start applications
   • Create a power interruption
   • Monitor the shutdown sequence and confirm a correct shutdown sequence

The UPS is connected and configured.
The Box PC will shut down properly in case of a power supply interruption and restart automatically when the power is restored.
**Additional Information**

The default *Input sensitivity setting* is *Standard voltage sensitivity* and this is correct. Do not set this parameter to *Low voltage sensitivity*. Doing so can cause a system malfunction when switching to battery mode.
5-9 Create a Windows System Repair Disk and a Windows Backup

A Windows Repair Disk is a disk that enables users to restore the Windows operating system. A Windows Backup is a backup that enables users to restore a user-defined content set. Use the following procedures to ensure you can always go back to this situation.

1. Create a Windows System Repair Disk.
   Refer to 5-9-2 Create a Windows System Repair Disk on page 5-59 for details.

2. Create a Windows Backup.
   Refer to 7-1-4 Create a Custom Backup with Windows Backup on page 7-5 for details.

5-9-1 Industrial PC with Programmable Multi Axis Controller Backup

Additional Information

The Programmable Multi Axis Controller is not included in the Windows System Repair Disk and not included in the Windows Backup.

5-9-2 Create a Windows System Repair Disk

A Windows System Repair Disk can repair Windows if a serious error occurs.

Additional Information

To create a Windows System Repair Disk, a separate Windows PC with a DVD writer is required that has the same Windows edition and System type as the IPC Programmable Multi Axis Controller. The Windows System Repair Disk can not be created with the IPC Programmable Multi Axis Controller.

Prepare:
• A PC with a DVD writer that has the same Windows edition and System type as your Box PC.
• An example of the Windows edition is "Windows 7" with "Service Pack 1".
• An example of the System type is "64-bit Operating System".
• An empty DVD

Use the Windows Backup and Restore mechanisms on the PC with a DVD writer to create a system repair disk.

To create a Windows System Repair Disk:

1. Start the PC that has a DVD writer and login.

2. Select the Windows Start Button.

3. In the search field, input Backup.
4 Select **Backup and Restore**. The Backup and Restore window opens.

5 Select **Create a system repair disk**. The Create a system repair disk window opens.

6 Select the applicable drive letter of the DVD writer and then select **Create disk**.

7 Wait until the disk is created and the remove it and store it in a safe place.

**Additional Information**

Refer to http://windows.microsoft.com/ for Backup and Restore details.
Operating Procedures

This section provides the operating procedures for the IPC Programmable Multi Axis Controller.

6-1 Power ON ........................................................................................................6-2
   6-1-1 Power ON Using the Power Button ......................................................... 6-2
   6-1-2 Power ON Using the Power ON/OFF Input ......................................... 6-2
   6-1-3 Auto Power ON .................................................................................... 6-2

6-2 Power OFF ......................................................................................................6-3
   6-2-1 Power OFF Using the Power PMAC Support Utility ......................... 6-3
   6-2-2 Forced Power OFF Using the Power Button ........................................ 6-3

6-3 React to Product Messages ........................................................................ 6-5
6-4 React to Windows Messages ..................................................................... 6-6
6-1 Power ON

This section provides Power ON details.

6-1-1 Power ON Using the Power Button

Start condition: Power is supplied to the Box PC and the Box PC is OFF.

1 Press the power button and release within 1 second.
   Refer to 2-4 Power Button on page 2-9 for the power button location.
   The Box PC starts and the PWR LED will turn ON.

2 Wait until the PWR LED is ON and verify that the ERR LED is OFF.
   The Box PC is ON and the Operating System, if installed, starts.

6-1-2 Power ON Using the Power ON/OFF Input

Start condition: Power is supplied to the Box PC and the Box PC is OFF.

1 Supply an input signal to pins 3 and 4 of the I/O connector.
   The input signal must remain ON for a minimum of 60 ms and a maximum of 750 ms to be correctly detected by the Box PC.
   The Box PC starts and the PWR LED will turn ON.

2 Wait until the PWR LED is ON and verify that the ERR LED is OFF.
   The Box PC is ON and the Operating System, if installed, starts.

Additional Information

• Refer to 4-2-2 I/O Connector Specifications on page 4-10 for connector specifications.
• Refer to 5-4-4 Wire the I/O Connector on page 5-38 for wiring details.

6-1-3 Auto Power ON

The Box PC can be configured to start up when power is supplied to the power connector.
The Power Loss Control BIOS setting controls this behavior.
Set the Power Loss Control setting to Turn ON to activate the Auto Power ON function.

Additional Information

Refer to A-1-5 BIOS - Boot on page A-9 for BIOS details.
6-2 Power OFF

This section provides Power OFF details. Before following power OFF procedures below, check that the IPC Programmable Multi Axis Controller is ON by examining the LED indicators on the Box PC.

6-2-1 Power OFF Using the Power PMAC Support Utility

Additional Information

- Do not use the Windows shutdown option because it will only shutdown Windows and not the complete system.
- Do not use the Power button because it will only shutdown Windows and not the complete system.

To Power OFF the complete system:

1. Ensure all programs are closed.
   If required close all active programs.

2. Select the Power PMAC Support Utility icon in the system tray.
   A pop-up menu will appear.

   ![Power PMAC Support Utility Menu]

   Refer to 3-2-3 Power PMAC Support Utility on page 3-5 for details.

3. Select **Shutdown Complete System** in the pop-up menu.
   The Box PC is powered OFF. This includes the operating system and the Programmable Multi Axis Controller.

6-2-2 Forced Power OFF Using the Power Button

Precautions for Safe Use

Press the power button for several seconds to force the product shutdown. Always back up files in the planned way to prevent data loss or system file corruption.

1. Ensure all programs are closed.
   If required, close all active programs to prevent losing unsaved data.

2. Press and hold the power button on the Box PC for 5 to 10 seconds.
   Refer to 2-4 Power Button on page 2-9 for power button location information.
   The IPC Programmable Multi Axis Controller will power OFF.
Any optional operating system settings related to power OFF will be disregarded.

3 Wait until the PWR LED is OFF.
The Box PC is powered OFF.
Confirm normal operation and check all product settings because unsaved data was lost.
6-3 React to Product Messages

The IPC Programmable Multi Axis Controller uses the Industrial PC Tray Utility icon A in the system tray area B of Windows to present Warnings and Errors.

Additional Information

Refer to 3-2-5 Industrial PC Tray Utility on page 3-10 for Industrial PC Tray Utility details.

Check the Industrial PC Tray Utility icon for a Warning or Error symbol. A Warning or Error symbol displayed on the Industrial PC Tray Utility icon indicates a product message.

To react to a product message:

1. Select the Industrial PC Tray Utility icon. A pop-up window will appear.
2. Read the message available in the pop-up.
3. Refer to 7-2-1 Warning and Error Messages on page 7-8 for all details on the message. Perform the actions presented for the message until the Warning or Error is resolved.

The product messages for the IPC Programmable Multi Axis Controller are resolved.
6-4 React to Windows Messages

Windows uses the Windows Action Center icon \( \text{A} \) in the system tray area \( \text{B} \) of Windows to present Warnings and Errors.

Windows 10

Windows 7

Check the Windows Action Center icon for a Warning or Error symbol. A Warning or Error symbol displayed on the Windows Action Center icon indicates a Windows message.

To react to a Windows message:

1. Open the Windows Action Center.
   - For Windows 10: Click the Windows Action Center icon.
   - For Windows 7: Rightclick the Windows Action Center icon and select Open Action Center from the pop-up window.
   A pop-up window will appear.

2. Read the message available in the window.

3. Perform the actions until each Warning or Error is resolved.
   The Windows messages for the IPC Programmable Multi Axis Controller are resolved.
Maintenance

This section provides an overview of all maintenance tasks for the IPC Programmable Multi Axis Controller.

7-1 Preventive Maintenance ................................................................. 7-2
  7-1-1 Preventive Maintenance Schedule .............................................. 7-2
  7-1-2 Clean the Box PC ................................................................. 7-4
  7-1-3 Keep Software Updated ......................................................... 7-4
  7-1-4 Create a Custom Backup with Windows Backup .................. 7-5

7-2 Corrective Maintenance ............................................................... 7-8
  7-2-1 Warning and Error Messages ................................................. 7-8
  7-2-2 Remove the Cover ................................................................. 7-10
  7-2-3 Replace the Fan Unit ........................................................... 7-11
  7-2-4 Replace the Battery ............................................................. 7-13
  7-2-5 Replace a Drive ................................................................. 7-15
  7-2-6 Replace the PCIe Card ......................................................... 7-20
  7-2-7 Restore and Repair Data ..................................................... 7-24
  7-2-8 Allocate a Drive in Windows ............................................... 7-29
  7-2-9 Windows Event Viewer ....................................................... 7-30
**7-1 Preventive Maintenance**

Preventive Maintenance covers all actions that prevent downtime.

### 7-1-1 Preventive Maintenance Schedule

Prevent unscheduled downtime with the following preventive maintenance schedule.

7-1-2 Clean the Box PC

Clean the Box PC periodically in order to keep it in the best operating condition.
Wipe the Box PC with a dry, soft cloth.

Precautions for Safe Use
Do not use corrosive substances to clean the product.
Doing so may result in the failure or malfunction.

7-1-3 Keep Software Updated

Always keep software at the latest released version to ensure stable operation.
This is specifically important for:
- Anti-virus software
- Firewall software
- Internet browser
- Windows security patches
- OMRON software

Precautions for Correct Use
After an OS update or a peripheral device driver update for the product is executed, the product behavior might be different. Confirm that operation is correct before you start actual operation.

Additional Information
- Refer to 5-7-1 Internet Browser on page 5-49 for Browser details.
- Refer to 5-7-2 Firewall on page 5-50 for Firewall details.
- Refer to 5-7-3 Anti-virus Software on page 5-50 for Anti-virus details.
7-1-4 Create a Custom Backup with Windows Backup

Use the following procedure to create a custom backup of the IPC Programmable Multi Axis Controller with the Windows Backup and Restore mechanism.

To manually or automatically create a customized backup:

1. Select the Windows Start Button.

2. In search field, input Backup.

3. Select Backup and Restore.
   The Backup and Restore window opens.

4. Select Set up backup.
   The Set up backup window opens.

5. Select the backup destination.
   A network location can be added with Save on a network.

Additional Information

Preferred locations for an automatic backup are:
- A network drive
- The local drive in drive bay B

Refer to 4-1-6 Storage Device Specifications on page 4-6 for specifications.
Select **Next**.
The following window will appear:

7 Select **Let me choose** and then select **Next**.
The following window will appear:

8 Select all directories you want to include in the backup.

9 Select **Next**.
10 Select **Configure schedule** or **Change schedule** and change the backup schedule. Ensure:
- The interval is short enough to minimize data loss when a restore is required
- The IPC Programmable Multi Axis Controller is powered ON during the backup periods
- The time the backup is scheduled does not interfere with normal operation
or uncheck **Run backup on a schedule** if an automatic backup is not possible.

11 Select **OK**.

12 Select **Save settings and run backup** to create the first backup.

**Precautions for Correct Use**

Create backups according to the preventive maintenance schedule to prevent data loss and system integrity issues. Refer to **7-1-1 Preventive Maintenance Schedule** on page 7-2 for intervals.

**Additional Information**

- Check your backup to ensure it contains all data required for a restore.
- Refer to **Restore a Custom Backup with Windows** on page 7-25 for the Restore Procedure.
7-2 Corrective Maintenance

Corrective maintenance covers all actions to correct problems that cause downtime.

WARNING

Do not attempt to disassemble, repair, or modify the product in any way. Doing so may result in malfunction or fire.

Contact your local OMRON representative if the corrective maintenance actions did not solve the problem.

7-2-1 Warning and Error Messages

Warning and Error messages are provided by the IPC Programmable Multi Axis Controller when there is a potential problem that may cause downtime. This section provides details about these messages. 

Warning messages inform you about a situation that will lead to downtime of the IPC Programmable Multi Axis Controller.

Error messages inform you about what caused the downtime of the IPC Programmable Multi Axis Controller.

The following message channels are available.

LED Indicators

The ERR LED indicator provides information on warnings and errors.

Additional Information

Refer to 2-3-2 ERR LED Indicator on page 2-8 for ERR details.

Industrial PC Support Utility

The Industrial PC Support Utility provides information on warnings and errors.

The Industrial PC Support Utility indicates:

- Internal temperature above setting
  Check the status of the Fan Unit and check the ambient conditions.
- Low revolution speed of the Fan Unit
  Check for excessive dust on the fans and in the Fan Unit.
- If required replace the Fan Unit.
- Low battery status
  Replace the battery.
Additional Information

• Refer to 4-4-1 Operation Environment Specifications on page 4-21 for environmental details.
• Refer to 7-2-2 Remove the Cover on page 7-10 for fan details.
• Refer to 7-2-3 Replace the Fan Unit on page 7-11 for Fan Unit replacement details.
• Refer to 7-2-4 Replace the Battery on page 7-13 for battery replacement details.

Windows Action Center

The Windows Action Center provides information on Windows related warnings and errors.

The Windows Action Center indicates security and maintenance issues.
Some examples:
• Virus protection (Important)
  Windows did not find anti-virus software on this computer.
• Windows Update (Important)
  Windows Update is not set up for this computer.
• Set up backup
  Your files are not being backed up.

Additional Information

Refer to 6-4 React to Windows Messages on page 6-6 for details.
7-2-2 Remove the Cover

The Cover of the IPC Programmable Multi Axis Controller provides access to the following items.
• Battery
• Fan Unit (applies to products with active cooling)
The inside of the Cover contains the following information.
• Battery replacement date
• License key for the operating system (optional)
No tools are required to open the Cover.
Use the following procedure to remove the Cover of the Box PC.

1 Power OFF your Box PC if it has active cooling.

Precautions for Safe Use

Do not remove the fan cover while the power is ON. Contact with the rotating fan may result in injury.

2 Remove the Cover.

1) Pull the lever 1 to unlock the Cover.
2) Lift the side 2 to tilt the Cover.
3) Remove 3 the complete Cover.

The Cover is removed.
To mount the Cover, position the side of the Cover in the Box PC and push the cover in place. The lever will lock in place.
7-2-3 Replace the Fan Unit

The fans are mounted in the Fan Unit.

Use the following procedure to replace the Fan Unit.

**Precautions for Safe Use**

If the replacement Fan Unit has been stored over 6 months then check the performance of the Fan Unit after replacement.

**Additional Information**

Refer to 2-9-2 Fan Unit on page 2-17 for the model.

1. Power OFF the Box PC.
2. Remove the Cover of the Box PC.

**Additional Information**

Refer to 7-2-2 Remove the Cover on page 7-10 for the cover removal procedure.

3. Disconnect the Fan Connectors from the board.
4 Replace the complete Fan Unit.

1) Push the lever 1 to unlock the Fan Unit.
2) Lift the lever to tilt 2 the Fan Unit.
3) Remove 3 the complete Fan Unit.

5 Insert the new Fan Unit in the Box PC.
Ensure the end of the Fan Unit A is positioned under the fan guide B.

6 Connect the Fan Connectors to the board.

7 Mount the Cover.

8 Power ON the system.
Confirm both fans rotate immediately after Power ON.
The fans are replaced and the alarm is automatically reset.
7-2-4 Replace the Battery

Precautions for Safe Use

- The Battery may leak, rupture, heat, or ignite. Never short-circuit, charge, disassemble, heat, or incinerate the Battery or subject it to strong shock.
- Dispose of any Battery that has been dropped on the floor or otherwise subjected to excessive shock. Batteries that have been subjected to shock may leak if they are used.
- UL standards require that only an experienced engineer replace the Battery. Make sure that an experienced engineer is in charge of Battery replacement.

Precautions for Correct Use

- Always touch a grounded piece of metal to discharge static electricity from your body before starting an installation or maintenance procedure.
- Make sure to use a battery of the correct type and install the battery properly.
- Apply power for at least five minutes before changing the battery. Mount a new battery within five minutes after turning OFF the power supply. If power is not supplied for at least five minutes, the clock data may be lost. Check the clock data after changing the battery.
- Turn ON the power after replacing the battery for a product that has been unused for an extended period of time. Leaving the product unused without turning ON the power even once after the battery is replaced may result in a shorter battery life.

Additional Information

- Refer to 2-9-1 Battery on page 2-17 for the battery model.

Use the following procedure to replace the battery:

1. Power OFF the Box PC.
2. Remove the cover.

Additional Information

Refer to 7-2-2 Remove the Cover on page 7-10 for the cover removal procedure.
3. Lift the battery 1 from the compartment.

4. Disconnect the battery from the battery connector 2.

5. Connect the new battery to the battery connector.

6. Place the new battery in the Box PC.
   Ensure the wires are at the side of the battery and not on top of the battery. If the wires are on top of the battery this might make closing and opening the cover more difficult.

7. Write the next date of replacement on the label at the inside of the cover.

8. Mount the cover.

9. Remove the power connector for at least 3 seconds to reset the battery warning.

10. Power ON the Box PC.

11. Check the Date and Time in the operating system.
   Correct the Date and Time if this is required.
   The battery is replaced and the alarm is reset.

---

**Additional Information**

Refer to 2-9-1 Battery on page 2-17 for lifetime of the battery.
**7-2-5 Replace a Drive**

Use the following procedure to replace a drive.

Prepare the new drive.

---

**Additional Information**

- Refer to *1-5 Product Configuration* on page 1-6 for the installed drive model.
- Refer to *2-10-4 Storage Devices* on page 2-20 for the available drive models.
- Refer to *4-1-6 Storage Device Specifications* on page 4-6 for drive specifications.

---

To replace a drive:

1. Power OFF the Box PC.
2. Remove the drive cover.
   
   1) Push the lock lever 1.
   2) Tilt the cover 2.
   3) Remove the drive cover 3.

---

**Additional Information**

- Refer to *2-5 Drive Bays* on page 2-10 for the location of the drive cover.
- The Box PC has 2 drive bays, marked with "A" and "B" at the left side of the drive cover. Take note of the bay position for the drive that is being removed and do not place a drive in the incorrect bay.
3 Pull the metal shielding cover out of the Box PC.

4 Insert the drive cover in the drive bracket bay ① and move it down ② so that it locks in the drive bracket.
5. Remove the drive bracket from the Box PC using the drive cover.

6. Remove the 4 mounting screws ① and then remove the drive ② from the drive bracket.
7 Align the connectors of the replacement drive as shown on the bracket. Then insert the replacement drive in the bracket and insert the 4 mounting screws. Tighten these screws with a torque of 0.35 N·m.

8 Insert the bracket with the replacement drive into the correct bay of the Box PC. Ensure the bracket is completely in the Box PC with an extra push.

The drive bracket will lock into place when it is fully inserted.
9 Insert the metal shielding cover.

10 Mount the drive cover.
The lock lever will click when closed correctly.

11 Restore the drive data.
   • For products NYB□ and NYP□:
     • For an Industrial PC with RTOS Controller restore the drive data from a backup.
     • For an Industrial PC without Operating System restore the drive data from a backup.
     • For an Industrial PC with a Windows operating system refer to the restore procedure in the section Corrective Maintenance to restore data.
   • For products NY512-A□ refer to the restore procedure in the section Corrective Maintenance to restore data.
   • For products NY512-1□ refer to the NY-series IPC Machine Controller Industrial Panel PC / Industrial Box PC Setup User’s Manual (Cat. No. W568) to restore data from a backup.

12 Finalize the drive replacement.
   If the Box PC has a Windows operating system and the storage drive is not visible in Windows then the drive needs to be allocated.
   The drive is replaced.
7-2-6 Replace the PCIe Card

Use the following procedure to replace the PCIe Card.

Prepare:
• The PCIe Card

**Additional Information**

Refer to 4-1-7 PCIe Card Specifications on page 4-7 for PCIe specifications.

• The PCIe Card mounting materials: Card Clip and Card Support
  These are supplied with the IPC Programmable Multi Axis Controller.

To replace the PCIe Card:

1. Power OFF the system.
2. Unmount the Box PC.
3. Remove the two crosshead screws 1 indicated with "open" and then pull up 2 the PCIe Drawer.
   The indent at the side of the drawer will help you to pull the drawer from the Box PC.
4  Push the notch 1 at the bottom of the Card Support up and rotate 2 the Card Support.
    Slide the Card Support 3 away from the card to create space and to remove it.

5  Pull the middle of the Card Clip to unlock it and remove it from the PCIe Drawer.
6 Remove the PCIe Card from the PCIe Drawer.

The PCIe Card is now removed.

7 Place the replacement PCIe Card in the PCIe Drawer.

Ensure the PCIe Card is inserted into the correct opening.
8 Place the Card Clip in the PCIe Card and PCIe Drawer 1 and then rotate the Clip 2 to lock it in place.

9 Slide the Card Support 1 so that it supports the side of the PCIe Card. Rotate the Card Support 2 to lock it in place.

Ensure the Card Support contacts the PCIe Card with the small groove so that there is support below and above the PCIe Card.
Insert the PCIe Drawer in the Box PC and then insert the two crosshead screws that hold the PCIe Drawer in place.

Remount the Box PC.

Confirm normal operation.

The PCIe Card is replaced.

**7-2-7 Restore and Repair Data**

Depending on the available backup and repair data an applicable restore or repair action can be selected.

Use following actions to restore or repair your Box PC.
- Restore a user's selection of folders to the moment the selected Windows backup was created. Refer to *Restore a Custom Backup with Windows* on page 7-25 for Windows restore details.

**Additional Information**

Contact your OMRON representative when the Box PC needs to be restored and you do not have a system backup.
### Restore a Custom Backup with Windows

Use the following procedure to restore a custom backup of user files with Windows Backup and Restore.

#### Additional Information

- With Windows Backup and Restore it is not possible to restore the complete boot disk or the operating system. Use the Windows Repair Disk to repair the Windows operating system. Refer to [http://windows.microsoft.com/](http://windows.microsoft.com/) for Backup and Restore details.
- Refer to 5-9-2 Create a Windows System Repair Disk on page 5-59 for Repair Disk details.
- Refer to 7-1-4 Create a Custom Backup with Windows Backup on page 7-5 for Custom Backup details.
- Use the Windows System Repair Disk to repair the Windows operating system when Windows can not be started. Refer to Repair Windows with the System Repair Disk on page 7-28 for repair details.

Ensure:
- The IPC Programmable Multi Axis Controller is ON
- You are logged in
- A backup is created earlier and it is available

To restore a backup:

1. Select the Windows **Start** Button.
2. In the search field, input **Backup**.
3. Select **Backup and Restore**. The Backup and Restore window opens.
4 Select **Restore my files**. The restore files window opens.

5 Use the buttons **Search** and **Browse for files** or **Browse for folders** to find the created backup.

6 Add the files and folders to be restored and then select **Next**.

---

**Additional Information**

With this Windows Restore procedure it is not possible to restore files that are in use. This means system files and files of the logged in user can not be restored with this procedure. Refer to **Repair Windows with the System Repair Disk** on page 7-28 for Windows Repair details.
7 Select **In the original location** and then select **Next**. The progress window will appear.

![](image1.png)

8 Wait until the message **Your files have been restored** appears and then select **Finish**.

![](image2.png)

The files are restored.
Repair Windows with the System Repair Disk

Use the following procedure to repair the Windows operating system with a System Repair Disk.

Ensure:
- The IPC Programmable Multi Axis Controller is powered OFF.
- A System Repair Disk is created earlier and it is available.

To perform a system repair:

1. Connect a USB keyboard, a USB mouse and a USB external DVD drive to the IPC Programmable Multi Axis Controller.

2. Power ON the IPC Programmable Multi Axis Controller and immediately press the F11 key repeatedly.

3. Insert the System Repair Disk in the DVD drive.

4. Select DVD Drive as boot device and press Enter. The message *Windows is loading files ...* and a progress bar appear.

5. Press any key to start and wait until the recovery software started.

6. Select your keyboard language and then select Next. The System Recovery Options window appears.

7. Select *Restore your computer using a system image that you created earlier* and select Next.

8. Select *Use latest available system image* and then select Next. The Re-Image Your Computer window appears.

9. Do not change the setting to restore C: , select Next.

10. Review the settings and select Finish.

11. Wait until the repair process is finished, this can take several hours.

12. Restart the IPC Programmable Multi Axis Controller. Windows is repaired.

Additional Information

- Refer to 5-9-2 Create a Windows System Repair Disk on page 5-59 for System Repair disk creation.
- Refer to 5-9 Create a Windows System Repair Disk and a Windows Backup on page 5-59 for Backup creation.
7-2-8  Allocate a Drive in Windows

An added drive must be allocated before it becomes visible in Windows.
To allocate a drive in Windows:

1. Ensure the Box PC is ON.
2. Select the Windows Start Button.
3. In the search field, input partition.
4. Select Create and format hard disk partitions.
   The Disk Management window opens. The new disk is displayed with a storage space Unallocated.
5. Right click on the unallocated space and select New Simple Volume.
   The New Simple Volume Wizard opens.
6. Follow the steps in the New Simple Volume Wizard.
   The drive is installed and ready for use in Windows under the configured drive letter.

Additional Information
Do not format, resize or change settings for partition C:. Windows is installed on drive partition C: and any change to this partition can cause Windows to stop working.
**7-2-9 Windows Event Viewer**

The Windows Event Viewer displays logged events. These logged events can support you in corrective maintenance.

1. Select the Windows **Start** Button.
2. In the search field, input **Event**.
3. Select **View event logs**.
   The Event Viewer opens.

   ![Event Viewer Screen](image)

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Selection tree</td>
</tr>
<tr>
<td>B</td>
<td>Event list</td>
</tr>
<tr>
<td>C</td>
<td>Event details</td>
</tr>
<tr>
<td>D</td>
<td>Action list</td>
</tr>
</tbody>
</table>

4. In the Selection tree expand **Windows Logs** and select **Application**.
   The Event list will display the Events.

5. Select the heading **Source** to sort the event messages per application.

6. Scroll to the event you want to investigate.
   Refer to the section 'Logging' of a specific utility for more details.

7. Select the event to display details in the Event details window or to take action in the Action overview window.
Filter Events and Event Details

This procedure explains how to filter events in the Windows event log.

To filter the events:

1. Open the Windows Event Viewer.
   Refer to 7-2-9 Windows Event Viewer on page 7-30 for details.

2. In the Actions list select Filter Current Log.
   The Filter Current Log page opens.

3. Input the desired filters and select OK.

4. The filtered events will appear in Event list of the Event Viewer.
   Select an event in the Event list to display Event details in the Event details part of the Event Viewer.
   The filtered events are available including the details per event.

A-1 BIOS

This section provides the BIOS information of the IPC Programmable Multi Axis Controller.

WARNING
Changing BIOS information is only allowed for the engineer in charge that possesses a thorough understanding of the BIOS settings because it can change the behavior of the product.

A-1-1 BIOS Overview
The BIOS contains settings that influence the behavior of the IPC Programmable Multi Axis Controller. The touchscreen functionality is not functional when working in BIOS. Ensure a USB keyboard is connected.

BIOS Setup Program
Press the DEL or F2 key repeatedly directly after Power ON to access the BIOS Setup Program.

Boot Selection Popup Menu
Press the F11 key repeatedly directly after Power ON to display the Boot Selection Popup menu. The popup menu allows selection of the boot device and the option to enter the BIOS setup program.

BIOS Structure
The BIOS contains a menu bar, a left frame and a right frame. The left frame displays all the options that can be configured in the selected menu. The left frame uses following colors:

• Blue = Configurable options
• Greyed-out = Not configurable
• Inverse white = Selected

The right frame displays the key legend. Above the key legend is an area reserved for text messages. These text messages explain the options and the possible impacts when you change the selected option in the left frame.

Use the → ← keys to navigate between pages.

The menu bar gives access to following pages with settings:

• Main
  Refer to A-1-2 BIOS - Main on page A-4 for Main details.
• Advanced
  Refer to A-1-3 BIOS - Advanced on page A-5 for Advanced details.
• Chipset
  Refer to A-1-4 BIOS - Chipset on page A-8 for Chipset details.
• Boot
Refer to A-1-5 BIOS - Boot on page A-9 for Boot details.

• Security
  Refer to A-1-6 BIOS - Security on page A-10 for Security details.

• Save & Exit
  Refer to A-1-7 BIOS - Save & Exit on page A-10 for Save and Exit details.

### BIOS - Navigation and Function Keys

The right part of the BIOS screens is divided in two parts.

Top part.
Provides additional information on selected screens or parameters.

Bottom part.
Provides information on Keys.
- → ← : Select Screen
  Changed between different BIOS pages.
- ↑ ↓ : Select Item
  Changed between different parameters.
- Enter: Select
  Selects the parameter that has the focus and displays a submenu or the possibility to change the parameter.
- + / - : Change Option
  Change settings. A numerical value will be increased or decreased. A boolean value will toggle.
- F1: General Help
  Displays help information.
- F2: Previous Values
  Changes all parameters to the values they had when entering the BIOS.
- F9: Optimized Defaults
  Changes all settings to the default values.
- F10: Save & Exit
  Saves all changes and exits the BIOS.
- ESC: Exit
  Go one level up. For parameters this is the previous level. For the main pages this exits the BIOS.
**BIOS Password & Write Protection**

A BIOS password protects the BIOS setup program from unauthorized access. This ensures that users cannot change the system configuration without authorization. With an assigned BIOS password, the BIOS prompts the user for a password on a setup entry. If the password entered is wrong, the BIOS setup program will not launch.

The BIOS uses encryption for the password. The BIOS password is case sensitive with a minimum of 3 characters and a maximum of 20 characters. Once a BIOS password has been assigned, the BIOS activates the grayed out **BIOS Update and Write Protection** option. If this option is set to **enabled**, only authorized users (users with the correct password) can update the BIOS. With the BIOS password protection and the BIOS update and write protection, the system configuration is completely secured. If the BIOS is password protected, you cannot change the configuration of an end application without the correct password.

**A-1-2 BIOS - Main**

The main setup screen gives platform information about the BIOS, Board Information, Firmware Revision, MAC Addresses and information about the number of Boots and the Running Time.

Changeable BIOS Main parameters and their factory default values:

- **System Date**
  
  Use the **Enter** key to the next Date field.

- **System Time**
  
  Use the **Enter** key to the next Time field.
This section provides advanced BIOS information.

Changeable BIOS Advanced parameters and their factory default values:

*1. Power Loss Control settings are:
   Remain OFF: The Box PC will stay OFF when power is supplied to the power connector.
   Turn ON: The Box PC will automatically start up when power is supplied to the power connector.
   Last State: The Box PC will start up or remain OFF when power is supplied based on the Box PC state at the moment power was removed from the power connector.
A-1-6 BIOS - Security

Provides security information like BIOS Password and HDD information.

**WARNING**

Security setting adjustments should only be performed by the engineer in charge that possesses a thorough understanding of the security settings. Selecting non-recommended security settings can put your system at risk.

Changeable BIOS Security parameters and their factory default values:

<table>
<thead>

A-1-7 BIOS - Save & Exit

Provides the possibility to leave the BIOS with or without saving changes.

Save & Exit Parameters: **Disabled**.

- **Save Changes and Exit**
  Changed settings are saved and the Operating System starts with the changed settings.

- **Discard Changes and Exit**
  Changed settings are not saved and the Operating System starts with the unchanged settings.

- **Save Changes and Reset**
  Changed settings are saved and the Box PC restarts using the changed settings.

- **Discard Changes and Reset**
  Changed settings are not saved and the Box PC restarts with the unchanged settings.

- **Save Changes**
  Changed settings are saved and the BIOS setup stays open.

- **Discard Changes**
  Changed settings are reverted to their last saved values and the BIOS setup stays open.

- **Restore Defaults**
  Revert all BIOS settings to factory default.
A-2 Customize Windows

This section provides an overview of the tools to customize Windows.

A-2-1 Enhanced Write Filter

The Enhanced Write Filter (EWF) is applicable to Box PCs with a Windows 7 operating system. The Enhanced Write Filter (EWF) intercepts disk changes and stores them into a memory overlay in RAM memory instead of applying them to the original volume.

Additional Information

• File-Based Write Filter (FBWF) provides a similar function, but operates at the file level, while EWF operates at the sector level.
• Refer to the Microsoft Developer Network (MSDN) for detailed information.

Application

EWF and FBWF provide the following benefits:
• Write-protect one or more partitions on a system.
• Make it possible to revert changes and revert to the original disk content.
• Enable booting from read-only media.
  By redirecting all write requests to RAM, EWF and FBWF enable the run-time image to maintain the appearance of a writable run-time image.
• Improve the file system performance when using relatively slow storage.
• Minimize write actions to the disk.
  For example, minimize write access to flash memory. Write cycles on flash memory are limited for technical reasons.

Usage

EWF is included in the Windows Embedded Standard 7 image and disabled by default. The configuration of this component can be defined with the command line tool **EWMGR.EXE**.

To run EWF Manager, open the Command Prompt with Administrator rights.

<table>
<thead>
<tr>
<th>Command</th>
<th>Function</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>ewfmgr</td>
<td>Shows an overview with current status.</td>
<td>---</td>
</tr>
<tr>
<td>ewfmgr c: -enable</td>
<td>Enables the write filter for the drive C.</td>
<td>The protection is not effective until the system is restarted.</td>
</tr>
<tr>
<td>ewfmgr c: -commit</td>
<td>Writes all the changes in the memory overlay to the physical disk during the next restart.</td>
<td>Committing the overlay can affect the speed of the boot process.</td>
</tr>
<tr>
<td>ewfmgr c: -commitanddisable</td>
<td>Writes all the changes in the memory overlay to the physical disk during the next restart, and disables the disk protection.</td>
<td>Committing the overlay can affect the speed of the boot process. The protection is not disabled until the system is restarted.</td>
</tr>
</tbody>
</table>
## Considerations

- EWF and FBWF cannot be used simultaneously.
- To prevent data loss in the event of a power failure, the use of a UPS is recommended.
- When the EWF function is enabled and a large amount of data is written, the system memory space will be reduced and operation may become unstable. To prevent this problem, it is recommended that a large amount of data be written to a different location.
- Automatic Adjustment of daylight saving time (DST) is incompatible with the Enhanced Write Filter (EWF).

### Additional Information

Refer to the Microsoft Developer Network (MSDN) for DST details.

## A-2-2 File-Based Write Filter

The File-Based Write Filter (FBWF) is applicable to Box PCs with a Windows 7 operating system. The File-Based Write Filter (FBWF) intercepts file changes and stores them into a memory overlay in RAM memory instead of applying them to the original volume. When FBWF is enabled, all files and folders of a partition are protected unless they are included in an exception list.

### Additional Information

- Enhanced Write Filter (EWF) provides a similar function, but operates at the sector level, while FBWF operates at the file level. FBWF is more flexible in its configuration than EWF and allows immediate writing without rebooting.
- Refer to the Microsoft Developer Network (MSDN) for detailed information.

## Application

EWF and FBWF provide the following benefits:

- Write-protect one or more partitions on a system.
- Make it possible to revert changes and revert to the original disk content.
- Enable booting from read-only media.

By redirecting all write requests to RAM, EWF and FBWF enable the run-time image to maintain the appearance of a writable run-time image.
- Improve the file system performance when using relatively slow storage.
Minimize write actions to the disk.
For example, minimize write access to flash memory. Write cycles on flash memory are limited for technical reasons.

# Usage

FBWF is included in the Windows Embedded Standard 7 image and disabled by default. The configuration of this component can be defined with the command line tool `FBWFMGR.EXE`.

To run to FBWF Manager, open the Command Prompt with Administrator rights.

<table>
<thead>
<tr>
<th>Command</th>
<th>Function</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>fbwfmgr</td>
<td>Shows an overview with current status.</td>
<td>---</td>
</tr>
<tr>
<td>fbwfmgr /displayconfig</td>
<td>Shows current configuration.</td>
<td>---</td>
</tr>
<tr>
<td>fbwfmgr /enable</td>
<td>Enables the write filter.</td>
<td>The protection is not effective until the system is restarted.</td>
</tr>
<tr>
<td>fbwfmgr /addvolume c:</td>
<td>Adds a volume to the protected volume list.</td>
<td>That volume will be protected after the next restart.</td>
</tr>
<tr>
<td>fbwfmgr /commit c: \Test.txt</td>
<td>Writes the changes to the protected file/folder.</td>
<td>---</td>
</tr>
<tr>
<td>fbwfmgr /addexclusion C: \Test.txt</td>
<td>Adds a write-through path to the exclusion list (file/folder).</td>
<td>The exclusion is active after the next restart.</td>
</tr>
<tr>
<td>fbwfmgr /removeexclusion C: \Test.txt</td>
<td>Removes the write-through path from the exclusion list (file/folder).</td>
<td>The exclusion is removed after the next restart.</td>
</tr>
<tr>
<td>fbwfmgr /h</td>
<td>Displays a helpscreen that explains all commands and options available.</td>
<td>A complete reference can also be found at the Microsoft Developer Network (MSDN).</td>
</tr>
</tbody>
</table>

**Additional Information**

When specifying a file name, notice the space between drive name (c:) and file path (\Test.txt).

**Considerations**

- EWF and FBWF cannot be used simultaneously.
- FBWF can only protect formatted volumes. Do not move files between protected and unprotected volumes.
- When the FBWF function is enabled and a large amount of data is written, the system memory space will be reduced and operation may become unstable. To prevent this problem, it is recommended that a large amount of data be written to a different location.
- FBWF supports only NTFS and FAT32 file systems.
- Automatic Adjustment of daylight saving time (DST) is incompatible with the File-Based Write Filter (FBWF).

**Additional Information**

Refer to the Microsoft Developer Network (MSDN) for DST details.
